Native Instruments introduces DEEP RECONSTRUCTIONS

Second multi-effect KORE SOUNDPACK uses advanced DSP algorithms for creative audio processing, including custom REAKTOR ensembles

Berlin, May 28th, 2009 – Native Instruments today released DEEP RECONSTRUCTIONS, a collection of cutting-edge multi-effects based on the powerful sound processing features of the KORE platform. The new KORE SOUNDPACK provides a wealth of advanced effect configurations that can be used to tweak and transform any audio material in innovative and inspiring ways, for direct use in KORE 2 and in the free KORE PLAYER.

Complementing the acclaimed DEEP TRANSFORMATIONS library, the second multi-FX collection in the KORE SOUNDPACK arsenal provides sophisticated time-based effects configurations that can drastically alter and rearrange beats, melody lines, vocals and any other audio material. DEEP RECONSTRUCTIONS offers 150 complex effect patches with 1,200 Sound Variations, which draw on both the high-quality KORE effect algorithms and on the integrated engines of REAKTOR, ABSYNTH and GUITAR RIG for their signal processing power. Through intricate combinations of delay, reverb, modulation, pitch shifting, resampling, filtering and dynamics processing, signals can be sliced, frozen and sequenced with spectacular and unconventional results.

Despite the complexity of the underlying effect configurations, the operation of DEEP RECONSTRUCTIONS remains entirely straightforward thanks to the KORE user interface. The unified parameter mapping within KORE 2 and KORE PLAYER gives immediate, intuitive control over the sonic characteristics of the effects, making them ideal for live performance and for creative sound manipulation in the studio.

Pricing and availability

DEEP RECONSTRUCTIONS is available for download purchase in the NI Online Shop for \$79 / 69 €.

About Native Instruments

Native Instruments is the pioneer and market leader in the field of software instruments, and one of the key players in the market of computer-based audio production technology. The company's mission is to develop outstanding musical tools for all styles and genres. The resulting products regularly push technological boundaries and open up new creative horizons for professionals and amateurs alike.

Native Instruments opened up the fascinating world of real-time sound synthesis on standard computers in 1996, and today offers an extensive product range for the Instruments, Guitar and DJ markets, designed and developed by three corresponding divisions within the company. Native Instruments currently employs more than 150 people in its two offices in Berlin and Los Angeles, and works closely with more than 40 international distribution partners to ensure its future growth and success.
