Callbacks

General Information

- A callback is a section within a script that is being "called" (i.e. executed) at certain times.
- All callbacks start with `on <callback-name>` and end with `end on`
- Callbacks can be stopped by using the command `exit`.
- Each callback has a unique ID number which can be retrieved with `$NI_CALLBACK_ID`
- You can query which callback triggered a function with `$NI_CALLBACK_TYPE` and the corresponding built-in constants.

Examples

```function show_callback_type
    if ($NI_CALLBACK_TYPE = $NI_CB_TYPE_NOTE)
        message("Function was called from note callback!")
    end if
    if ($NI_CALLBACK_TYPE = $NI_CB_TYPE_CONTROLLER)
        message("Function was called from controller callback!")
    end if
end function

on note
    call show_callback_type
end on

on controller
    call show_callback_type
end on
```

See Also

`exit`

`$NI_CALLBACK_ID`

`$NI_CALLBACK_TYPE`
on async_complete

| async complete callback, triggered after the execution of any load/save command |

Remarks

To resolve synchronization issues, the commands mentioned above return unique IDs when being used. Upon completion of the command’s action, the on async_complete callback gets triggered and the built-in variable $NI_ASYNC_ID is updated with the ID of the command that triggered the callback. If the command was completed successfully (for example if the file was found and successfully loaded), the internal value $NI_ASYNC_EXIT_STATUS is set to 1, otherwise it is 0.

Examples

```
on init
    declare $load_midi_file_id
    declare ui_button $load_midi_file
end on

on ui_control ($load_midi_file)
    $load_midi_file_id := load_midi_file(<midifile-path>)
    while ($load_midi_file_id # -1)
        wait (1)
    end while
    message ("MIDI file loaded")
end on

on async_complete
    if ($NI_ASYNC_ID = $load_midi_file_id)
        $load_midi_file_id := -1
    end if
end on
```

Example that pauses the ui_control callback until the MIDI file is loaded

See Also

$NI_ASYNC_EXIT_STATUS
$NI_ASYNC_ID
Load/Save Commands
on controller

MIDI controller callback, executed whenever a CC, pitch bend or channel pressure message is received

Examples

```plaintext
on controller
    if (in_range($CC_NUM, 0, 127))
        message("CC Number: " & $CC_NUM & " - Value: " & %CC[$CC_NUM])
    else
        if ($CC_NUM = $VCC_PITCH_BEND)
            message("Pitchbend" & " - Value: " & %CC[$CC_NUM])
        end if
        if ($CC_NUM = $VCC_MONO_AT)
            message("Channel Pressure" & " - Value: " & %CC[$CC_NUM])
        end if
    end if
end on
```

query CC, pitch bend and channel pressure data

See Also

set_controller()
ignore_controller
%CC[]
$CC_NUM
$VCC_PITCH_BEND
$VCC_MONO_AT
**on init**

**Remarks**

The init callback will be executed when:

- clicking the "Apply" button in the script editor
- loading a script preset or an instrument
- restarting KONTAKT's audio engine by clicking the restart button in the Monitor/Engine tab or the restart button in KONTAKT's header
- loading a snapshot with `set_snapshot_type()` set to 0

**Examples**

```plaintext
on init
    declare ui_button $Sync
    declare ui_menu $time
    add_menu_item ($time,"16th",0)
    add_menu_item ($time,"8th",1)
    $Sync := 0 {sync is off by default, so hide menu}
    move_control ($time,0,0)
    move_control ($Sync,1,1)
    make_persistent ($Sync)
    make_persistent ($time)
    read_persistent_var ($Sync)
    if ($Sync = 1)
        move_control ($time,2,1)
    else
        move_control ($time,0,0)
    end if
end on
on ui_control ($Sync)
    if ($Sync = 1)
        move_control ($time,2,1)
    else
        move_control ($time,0,0)
    end if
end on
```

*init callback with read_persistent_var()*
on init
  declare ui_button $Sync
  move_control ($Sync,1,1)
  make_persistent ($Sync)

  declare ui_menu $time
  add_menu_item ($time,"16th",0)
  add_menu_item ($time,"8th",1)
  move_control ($time,0,0)
  make_persistent ($time)
end on

function show_menu
  if ($Sync = 1)
    move_control ($time,2,1)
  else
    move_control ($time,0,0)
  end if
end function

on persistence_changed
  call show_menu
end on

on ui_control ($Sync)
  call show_menu
end on

the same script functionality, now with persistence_changed callback

See Also

make_persistent()
read_persistent_var()
on persistence_changed
on listener

listener callback, executed at definable time intervals or whenever a transport command is received

Remarks

The listener callback is executed at time intervals defined with the set_listener() command. It can also react to the host's transport start and stop command. This makes it the ideal callback for anything tempo synced like sequencers, arpeggiators, midi file player etc.

- In some situations (like tempo changes within the host) ticks can be left out.

Examples

on init
    declare ui_knob $Test (0,99,1)
    declare $direction
    declare $tick_counter
    set_listener($NI_SIGNAL_TIMER_MS,10000)
end on

on listener
    if ($NI_SIGNAL_TYPE = $NI_SIGNAL_TIMER_MS)
        if ($direction = 0)
            inc($tick_counter)
        else
            dec($tick_counter)
        end if

        $Test := $tick_counter

        if ($tick_counter = 99)
            $direction := 1
        end if
        if ($tick_counter = 0)
            $direction := 0
        end if
    end if
end on

not useful as such, but nice to look at

set_listener()
change_listener_par()
$NI_SIGNAL_TYPE
$NI_SONG_POSITION
### on note

<table>
<thead>
<tr>
<th>on note</th>
</tr>
</thead>
<tbody>
<tr>
<td>note callback, executed whenever a note on message is received</td>
</tr>
</tbody>
</table>

#### Examples

```plaintext
on note
    message("Note Nr: " & $EVENT_NOTE & " - Velocity: " & $EVENT_VELOCITY)
end on
```

**query note data**

#### See Also

```plaintext
on release
    ignore_event()
    set_event_par()
    get_event_par()
    $EVENT_NOTE
    $EVENT_VELOCITY
    $EVENT_ID
```
on persistence_changed

<table>
<thead>
<tr>
<th>on persistence_changed</th>
</tr>
</thead>
<tbody>
<tr>
<td>executed after the init callback or whenever a snapshot has been loaded</td>
</tr>
</tbody>
</table>

Remarks

The on persistence_changed callback is called whenever the persistent variables change in an instrument, i.e. it is always executed after the init callback has been called and/or upon loading a snapshot.

Examples

on init

```
set_snapshot_type(1) {init callback not executed upon snapshot loading}
reset_ksp_timer

declare $init_flag {1 if init callback has been executed, 0 otherwise}
$init_flag := 1

declare ui_label $label (2,2)
set_text($label,"init callback " & $KSP_TIMER)
end on
```

function add_text
```
    add_text_line($label,"persistence_changed callback " & $KSP_TIMER)
end function
```

on persistence_changed
```
if ($init_flag = 1) {instrument has been loaded}
call add_text
else {snapshot has been loaded}
    set_text($label,"Snapshot loaded")
end if
```

```
$init_flag := 0
end on
```

query if a snapshot or if an instrument has been loaded – also demonstrates the ability to call functions upon initialization, i.e. the persistence callback acts as an extension to the init callback

See Also

on init

```
read_persistent_var()
set_snapshot_type()
```
on pgs_changed

on pgs_changed
executed whenever any pgs_set_key_val() command is executed in any script

Remarks

PGS stands for Program Global Storage and is a means of communication between script slots. See the chapter on PGS for more details.

Examples

on init
    pgs_create_key(FIRST_KEY, 1) (defines a key with 1 element)
    pgs_create_key(NEXT_KEY, 128) (defines a key with 128 elements)
    declare ui_button $Push
end on

on ui_control($Push)
    pgs_set_key_val(FIRST_KEY, 0, 70 * $Push)
    pgs_set_key_val(NEXT_KEY, 0, 50 * $Push)
    pgs_set_key_val(NEXT_KEY, 127, 60 * $Push)
end on

Example 1 – pressing the button...

on init
    declare ui_knob $First (0,100,1)
    declare ui_table %Next[128] (5,2,100)
end on

on pgs_changed
{checks if FIRST_KEY and NEXT_KEY have been declared}
    if(pgs_key_exists(FIRST_KEY) and pgs_key_exists(NEXT_KEY))
        $First := pgs_get_key_val(FIRST_KEY, 0)
        %Next[0] := pgs_get_key_val(NEXT_KEY, 0)
        %Next[127] := pgs_get_key_val(NEXT_KEY, 127)
    end if
end on

will change the controls in this example, regardless of the script slot order.

See Also

pgs_create_key()
pgs_set_key_val()
pgs_get_key_val()
**on poly_at**

<table>
<thead>
<tr>
<th>on poly_at</th>
</tr>
</thead>
<tbody>
<tr>
<td>polyphonic aftertouch callback, executed whenever a polyphonic aftertouch message is received</td>
</tr>
</tbody>
</table>

### Examples

```on init
    declare %note_id[128]
end on

on note
    %note_id[$EVENT_NOTE] := $EVENT_ID
end on

on poly_at
    change_tune(%note_id[$POLY_AT_NUM],%POLY_AT[$POLY_AT_NUM]*1000,0)
end on
```

*a simple poly aftertouch to pitch implementation*

### See Also

**on release**

<table>
<thead>
<tr>
<th>on release</th>
</tr>
</thead>
<tbody>
<tr>
<td>release callback, executed whenever a note off message is received</td>
</tr>
</tbody>
</table>

**Examples**

```plaintext
on init
    declare polyphonic $new_id
end on

on release
    wait(1000)
    $new_id := play_note(EVENT_NOTE, EVENT_VELOCITY, 0, 100000)
    change_vol($new_id,-24000,1)
end on

creating an artificial release noise
```

**See Also**

```plaintext
on note
    ignore_event()
```
on rpn/nrpn

rpn and nrpn callbacks, executed whenever a rpn or nrpn (registered/nonregistered parameter number) message is received

Examples

on rpn
select ($RPN_ADDRESS)
  case 0
    message ("Pitch Bend Sensitivity" & " - Value: " & $RPN_VALUE)
  case 1
    message ("Fine Tuning" & " - Value: " & $RPN_VALUE)
  case 2
    message ("Coarse Tuning" & " - Value: " & $RPN_VALUE)
end select
end on

See Also

on controller
set_rpn/set_nrpn
msb() / lsb()
$RPN_ADDRESS
$RPN_VALUE

query standard rpn messages
on ui_control()

on ui_control(<variable>)

UI callback, executed whenever the user changes the respective UI element

Examples

on init
  declare ui_knob $Knob (0,100,1)
  declare ui_button $Button
  declare ui_switch $Switch
  declare ui_table %Table[10] (2,2,100)
  declare ui_menu $Menu
  add_menu_item ($Menu,"Entry 1",0)
  add_menu_item ($Menu,"Entry 2",1)
  declare ui_value_edit $VEdit (0,127,1)
  declare ui_slider $Slider (0,100)
end on

on ui_control ($Knob)
  message("Knob" & " (" & $ENGINE_UPTIME & ")")
end on

on ui_control ($Button)
  message("Button" & " (" & $ENGINE_UPTIME & ")")
end on

on ui_control ($Switch)
  message("Switch" & " (" & $ENGINE_UPTIME & ")")
end on

on ui_control (%Table)
  message("Table" & " (" & $ENGINE_UPTIME & ")")
end on

on ui_control ($Menu)
  message("Menu" & " (" & $ENGINE_UPTIME & ")")
end on

on ui_control ($Menu)
  message("Menu" & " (" & $ENGINE_UPTIME & ")")
end on

on ui_control ($VEdit)
  message("Value Edit" & " (" & $ENGINE_UPTIME & ")")
end on

on ui_control ($Slider)
  message("Slider" & " (" & $ENGINE_UPTIME & ")")
end on

various ui controls and their corresponding callbacks

See Also

on ui_update
on ui_update

**Remarks**

This command is triggered with every GUI change in KONTAKT, so use it with caution.

**Examples**

```plaintext
on init
    declare ui_knob $Volume (0,1000000,1)
    set_knob_unit ($Volume,$KNOB_UNIT_DB)
    set_knob_defval ($Volume,630859)
    $Volume := _get_engine_par (ENGINE_PAR_VOLUME,-1,-1,-1)
    set_knob_label ($Volume,_get_engine_par_disp...
        (ENGINE_PAR_VOLUME,-1,-1,-1))
end on

on ui_update
    $Volume := _get_engine_par (ENGINE_PAR_VOLUME,-1,-1,-1)
    set_knob_label ($Volume,_get_engine_par_disp...
        (ENGINE_PAR_VOLUME,-1,-1,-1))
end on

on ui_control ($Volume)
    _set_engine_par (ENGINE_PAR_VOLUME,$Volume,-1,-1,-1)
    set_knob_label ($Volume,_get_engine_par_disp...
        (ENGINE_PAR_VOLUME,-1,-1,-1))
end on
```

*mirroring instrument volume with a KSP control*

**See Also**

on ui_control()
Variables

General Information

- All user defined variables must be declared in the `on init` callback.
- Variable names may contain only numbers, characters and the underscore ( `_` ).
- Variable names are case-sensitive.
- Please do not create variables with the prefixes below, as these prefixes are used for internal variables and constants

```plaintext
$NI_
$CONTROL_PAR_
$EVENT_PAR_
$ENGINE_PAR_
```
$ (int variable)

```
define $<int variable>
```

declare a user-defined variable to store a single integer value

**Examples**

```
on init
    declare $test
    $test := -1
end on
```  
*creating a variable*

```
on init
    declare $test := -1
end on
```  
*creating a variable, same as above but shorter*

**See Also**

```
on init
    make_persistent()
    read_persistent_var()
    int_to_real()
    real_to_int()
```
% (int array)

declare %<array-name>[<num-of-elements>]

declare a user-defined array to store single integer values at specific indices

Remarks

- The maximal size of arrays is 32768.
- The number of elements must be defined with a constant value, a standard variable cannot be used.
- It is possible to initialize an array with one value (see the second example below).

Examples

on init
declare %presets[10*8] := (... 
{1} 8,8,8,0, 0,0,0,0,...
{2} 8,8,8,8, 0,0,0,0,...
{3} 8,8,8,8, 8,8,8,8,...
{4} 0,0,5,3, 2,0,0,0,...
{5} 0,0,4,4, 3,2,0,0,...
{6} 0,0,8,7, 4,0,0,0,...
{7} 0,0,4,5, 4,4,2,2,...
{8} 0,0,5,4, 0,3,0,0,...
{9} 0,0,4,6, 7,5,3,0,...
{10} 0,0,5,6, 4,4,3,2)
end on

creating an array for storing preset data

on init
    declare %presets[10*8] := (4)
end on
quick way of initializing the same array with the value 4.

See Also

Array and Group Commands
make_persistent()
~ (real variable)

<table>
<thead>
<tr>
<th>declare ~&lt;real variable&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>declare a user-defined variable to store a single real value</td>
</tr>
</tbody>
</table>

Remarks

- Real numbers should always be defined using a decimal, even if the number is a whole number. For example 2.0 should be used instead of just 2

Examples

```
on init
  declare ~test
  ~test := 0.5
end on
creating a variable
```

```
on init
  declare ~test := 0.5
end on
creating a variable, same as above but shorter
```

See Also

```
on init
make_persistent()
read.persistent_var()
int_to_real()
real_to_int()
```
? (real array)

```plaintext
declare ?<array-name>[<num-of-elements>]
```

Declare a user-defined array to store single real values at specific indices.

Remarks

- The maximal size of arrays is 32768.
- The number of elements must be defined with a constant integer value, a standard variable cannot be used.
- It is possible to initialize an array with one value (see the second example below).
- The commands `array_equal()` and `search()` do not work with arrays of real numbers.

Examples

```plaintext
on init
  {1} 1.0, 1.0, 1.0, 1.0,...  
  {2} 0.5, 0.7, 0.1, 0.5,...  
  {3} 1.0, 0.6, 0.6, 0.2,...  
  {4} 0.0, 0.0, 0.5, 0.3,...  
  {5} 0.0, 1.0, 0.4, 0.1)
end on
```

Creating an array for storing preset data

```plaintext
on init
declare ?presets[10*8] := (1.0)
end on
```

Quick way of initializing the same array with the value 1.0

See Also

Array and Group Commands

`make_persistent()`
@ (string variable)

```plaintext
declare @<variable-name>
```
declare a user-defined string variable to store text

Remarks

- You cannot declare and define a string variable in the same line of code as you can with an integer variable.
- It is possible to make string variables persistent.

Examples

```plaintext
on init
    declare @text
    @text := "Last received note number played or released: "
end on

on note
    message(@text & $EVENT_NOTE)
end on

on release
    message(@text & $EVENT_NOTE)
end on
```

`use string variables to display long text`

See Also

- !(string array)
- ui_text_edit
- make_persistent()
! (string array)

```plaintext
declare !<array-name>[<num-of-elements>]
```

declare a user-defined string array to store text strings at specified indices

Remarks

- Just like with string variables, the contents of a string array cannot be defined on the same line as the declaration.
- String arrays cannot be made persistent.

Examples

```plaintext
on init
  declare $count
  declare !note[12]
  !note[0] := "C"
  !note[1] := "Db"
  !note[7] := "G"
  !note[8] := "Ab"
  !note[10] := "Bb"

  declare !name[128]
  while ($count < 128)
    !name[$count] := !note[$count mod 12] & (($count/12)-2)
    inc ($count)
  end while
end on

on note
  message("Note played: " & !name[$EVENT_NOTE])
end on
```

Creating a string array with all MIDI note names

See Also

@ (string variable)
const $(constant integer)

declare const $<variable-name>

declare a user-defined constant to store a single integer value

Remarks

- As the name implies, the value of constant variables can only be read, not changed.
- It is quite common to capitalize the names of constants.

Examples

on init
  declare const $NUM_OF_PRESETS := 10
  declare const $NUM_OF_PARAMETERS := 5
  declare %preset_data[$NUM_OF_PRESETS * $NUM_OF_PARAMETERS]
end on

creating constants, useful when creating preset arrays

See Also

on init
const ~ (real constant)

```markdown
**Remarks**

- As the name implies, the value of constant variables can only be read, not changed.
- It is quite common to capitalize the names of constants.

**Examples**

```plaintext
on init
    declare const ~BIG_NUMBER := 100000.0
    declare const ~SMALL_NUMBER := 0.00001
end on
```

**See Also**

```plaintext
on init
```
polyphonic $ (polyphonic integer)

<table>
<thead>
<tr>
<th>declare polyphonic $&lt;variable-name&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>declare a user-defined polyphonic variable to store a single integer value per note event</td>
</tr>
</tbody>
</table>

Remarks

- A polyphonic variable acts as a unique variable for each executed note event, avoiding conflicts in callbacks that are executed in parallel for example when using `wait()`.
- A polyphonic variable retains its value in the release callback of the corresponding note.
- Polyphonic variables need much more memory than normal variables.
- Polyphonic variables should only be used in note and release callbacks.

Examples

```ksp
on init
    declare polyphonic $a
    {declare $a}
end on

on note
    ignore_event($EVENT_ID)
    $a:= 0
    while ($a < 13 and $NOTE_HELD = 1)
        play_note($EVENT_NOTE+$a,$EVENT_VELOCITY,0,$DURATION_QUARTER/2)
        inc($a)
        wait($DURATION_QUARTER)
    end while
end on

to hear the effect of the polyphonic variable, play and hold an octave: both notes will ascend chromatically. Then make $a a normal variable and play the octave again: $a will be shared by both executed callbacks, thus both notes will ascend in larger intervals

on init
    declare $counter
    declare polyphonic $polyphonic_counter
end on

on note
    message($polyphonic_counter & " " & $counter)
    inc($counter)
    inc($polyphonic_counter)
end on

Since a polyphonic variable is always unique per callback, $polyphonic_counter will always be 0 in the displayed message
```
**make_instr_persistent()**

<table>
<thead>
<tr>
<th>make_instr_persistent(&lt;variable&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>retain the value of a variable only with the instrument</td>
</tr>
</tbody>
</table>

**Remarks**

*make_instr_persistent()* is similar to *make_persistent(),* however the value of a variable is only saved with the instrument, not with snapshots. It can be used to e.g. prevent UI elements from being changed when loading snapshots.

**Examples**

```plaintext
on init
    set_snapshot_type(1) {init callback not executed upon snapshot loading}
    declare ui_knob $knob_1 (0,2,1)
    set_text($knob_1,"Pers.")
    make_persistent($knob_1)

    declare ui_knob $knob_2 (0,2,1)
    set_text($knob_2,"Instr Pers.")
    make_instr_persistent ($knob_2)

    declare ui_knob $knob_3 (0,2,1)
    set_text($knob_3,"Not Pers.")
end on

the second knob will not be changed when loading snapshots
```

**See Also**

*read_persistent_var()*
*make_persistent()*
*set_snapshot_type()*
**make_persistent()**

<table>
<thead>
<tr>
<th>make_persistent(&lt;variable&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>retain the value of a variable with the instrument and snapshot</td>
</tr>
</tbody>
</table>

**Remarks**

- The state of the variable is saved not only with the patch (or multi or host chunk), but also when a script is saved as a KONTAKT preset (.nkp file).
- The state of the variables is read at the end of the init callback. To load a stored value manually within the init callback, use `read_persistent_var()`.
- You can also use the **on persistence** callback for retrieving the values of persistent variables.
- When replacing script code by copy and replacing the text, the values of persistent variables are also retained.
- Sometimes, when working on more complex scripts, you'll want to "flush" the variables by resetting the script. You can do this by applying an empty script in the respective slot.

**Examples**

```plaintext
on init
  declare ui_knob $Preset (1,10,1)
  make_persistent ($Preset)
end on
```

user interface elements like knobs should usually retain their value when reloading the instrument

**See Also**

- `read_persistent_var()`
- **on persistence_changed**
- `make_instr_persistence()`
read_persistent_var()

read_persistent_var(<variable>)

instantly reloads the value of a variable that was saved via the make_persistent() command

Remarks

- This command can only be used within the init callback.
- The state of the variable is saved not only with the patch (or multi or host chunk), but also when a script is saved as a KONTAKT preset (.nkp file).
- When replacing script code by copy and replacing the text, the values of persistent variables is also retained.
- Sometimes, when working on more complex scripts, you'll want to "flush" the variables by resetting the script. You can do this by applying an empty script in the respective slot.
- You can also use the on persistence callback for retrieving the values of persistent variables

Examples

on init
  declare ui_label $label (1,1)
  declare ui_button $button
  set_text($button,"$a := 10000")
  
  declare $a
  make_persistent($a)
  read_persistent_var($a)
  set_text ($label,$a)
end on

on ui_control ($button)
  $a := 10000
  set_text($label,$a)
end on

after applying this script, click on the button and then save and close the NKI. After reloading it, the label will display 0 because the value of $a is initialized at the very end of the init callback. Now remove the {} around read_persistent_var and apply the script again. Voila.

See Also

make_persistent()
on persistence_changed
User Interface Controls

ui_button

```
declare ui_button $#<variable-name>
```
create a user interface button

Remarks

- a button (i.e. its callback) is triggered when releasing the mouse (aka mouse-up)
- a button cannot be automated

Examples

```
on init
    declare ui_button $free_sync_button
    $free_sync_button := 1
    set_text ($free_sync_button,"Sync")
    make_persistent ($free_sync_button)
    read_persistent_var($free_sync_button)
    if ($free_sync_button = 0)
        set_text ($free_sync_button,"Free")
    else
        set_text ($free_sync_button,"Sync")
    end if
end on

on ui_control ($free_sync_button)
    if ($free_sync_button = 0)
        set_text ($free_sync_button,"Free")
    else
        set_text ($free_sync_button,"Sync")
    end if
end on
```
a simple free/sync button implementation

ui_switch
ui_knob

`declare ui_knob $<variable-name>(<min>,<max>,<display-ratio>)`

create a user interface knob

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;min&gt;</td>
<td>the minimum value of the knob</td>
</tr>
<tr>
<td>&lt;max&gt;</td>
<td>the maximum value of the knob</td>
</tr>
<tr>
<td>&lt;display-ratio&gt;</td>
<td>the knob value is divided by &lt;display-ratio&gt; for display purposes</td>
</tr>
</tbody>
</table>

Examples

```plaintext
on init
    declare ui_knob $Knob_1 (0,1000,1)
    declare ui_knob $Knob_2 (0,1000,10)
    declare ui_knob $Knob_3 (0,1000,100)
    declare ui_knob $Knob_4 (0,1000,20)
    declare ui_knob $Knob_5 (0,1000,-10)
end on

various display ratios
```

```plaintext
on init
    declare $count
    declare !note_class[12]
    !note_class[0] := "C"
    !note_class[1] := "Db"
    !note_class[2] := "D"
    !note_class[3] := "Eb"
    !note_class[4] := "E"
    !note_class[5] := "F"
    !note_class[6] := "Gb"
    !note_class[7] := "G"
    !note_class[8] := "Ab"
    !note_class[10] := "Bb"
    declare !note_names[128]
    while ($count < 128)
        !note_names[$count] := !note_class[$count mod 12] & (($count/12)-2)
        inc ($count)
    end while
    declare ui_knob $Note (0,127,1)
    set_knob_label ($Note,!note_names[$Note])
    make_persistent ($Note)
    read_persistent_var($Note)
    set_knob_label ($Note,!note_names[$Note])
end on
```

knob displaying MIDI note names
ui_file_selector

declare ui_file_selector $<variable-name>

create a file selector

Remarks

Only one file selector can be applied per script slot.

Examples

(see next page)
on init
    set_ui_height(5)
    
    declare @basepath
    {set browser path here, for example
    @basepath := "~/Users/username/Desktop/MIDI Files/"}
    
    declare @file_name
    declare @file_path
    
    declare ui_file_selector $file_browser
    declare $browser_id
    $browser_id := get_ui_id($file_browser)
    
    set_control_par_str($browser_id,$CONTROL_PAR_BASEPATH,@basepath)
    set_control_par($browser_id,$CONTROL_PAR_FILE_TYPE,$NI_FILE_TYPE_MIDI)
    set_control_par($browser_id,$CONTROL_PAR_COLUMN_WIDTH,180)
    set_control_par($browser_id,$CONTROL_PAR_HEIGHT,170)
    set_control_par($browser_id,$CONTROL_PAR_WIDTH,550)
    move_control_px($file_browser,66,2)
    
    declare ui_button $prev
    declare ui_button $next
    move_control($prev,5,1)
    move_control($next,6,1)
    
    declare $load_mf_id
    $load_mf_id := -1
end on

on async_complete
    if ($NI_ASYNC_ID = $load_mf_id)
        $load_mf_id := -1
        if ($NI_ASYNC_EXIT_STATUS = 0)
            message("MIDI file not found!")
        else
            message("Loaded MIDI File: " & @file_name)
        end if
    end if
end on

on ui_control ($file_browser)
    @file_name := fs_get_filename($browser_id,0)
    @file_path := fs_get_filename($browser_id,2)
    $load_mf_id := load_midi_file(@file_path)
end on

on ui_control ($prev)
    fs_navigate($browser_id,0)
    @file_name := fs_get_filename($browser_id,0)
    @file_path := fs_get_filename($browser_id,2)
    $load_mf_id := load_midi_file(@file_path)
    $prev := 0
end on

on ui_control ($next)
    fs_navigate($browser_id,1)
    @file_name := fs_get_filename($browser_id,0)
    @file_path := fs_get_filename($browser_id,2)
    $load_mf_id := load_midi_file(@file_path)
    $next := 0
end on

loading MIDI files via ui file selector
ui_label

declare ui_label $<variable-name> (<width>,<height>)

create a user interface text label

<width> the width of the label in grid units
<height> the height of the label in grid units

Examples

on init
  declare ui_label $label_1 (1,1)
  set_text ($label_1,"Small Label")
  declare ui_label $label_2 (3,6)
  set_text ($label_2,"Big Label")
  add_text_line ($label_2,"...with a second text line")
end on

two labels with different size

on init
  declare ui_label $label_1 (1,1)
  set_text ($label_1,"Small Label")
  hide_part ($label_1,$HIDE_PART_BG)
end on

hide the background of a label (also possible with other ui elements)

See Also

set_text()
add_text_line()
hide_part()
ui_level_meter

| declare ui_level_meter $<variable-name> |
| create a level meter |

Remarks

- The level meter can only be attached to the output levels of buses or the instrument master.

Examples

```plaintext
on init
  declare ui_level_meter $Level1
  declare ui_level_meter $Level2
  attach_level_meter (get_ui_id($Level1),-1,-1,0,-1)
  attach_level_meter (get_ui_id($Level2),-1,-1,1,-1)
end on

creating two volume meters, each one displaying one channel of KONTAKT's instrument output
```

- attach_level_meter()
ui_menu

```
declare ui_menu $<variable-name>
```
create a user interface drop-down menu

**Examples**

```
on init
   declare ui_menu $menu
   add_menu_item ($menu, "First Entry", 0)
   add_menu_item ($menu, "Second Entry", 1)
   add_menu_item ($menu, "Third Entry", 2)
end on

a simple menu
```

```
on init
   declare $count
   declare ui_menu $menu

   $count := 1
   while ($count < 17)
      add_menu_item ($menu, "Entry Nr: " & $count, $count)
      inc ($count)
   end while
end on

create a menu with many entries in a jiffy
```

**See Also**

- get_menu_item_str()
- get_menu_item_value()
- get_menu_item_visibility()
- set_menu_item_str()
- set_menu_item_value()
- set_menu_item_visibility()
ui_slider

```
declare ui_slider $<variable-name> (<min>,<max>)
```

create a user interface slider

<table>
<thead>
<tr>
<th>&lt;min&gt;</th>
<th>the minimum value of the slider</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;max&gt;</td>
<td>the maximum value of the slider</td>
</tr>
</tbody>
</table>

**Examples**

**slider with default value**

```
on init
    declare ui_slider $test (0,100)
    set_control_par(get_ui_id($test),$CONTROL_PAR_DEFAULT_VALUE,50)
end on
```

**creating a bipolar slider by loading a different picture background**

```
on init
    declare ui_slider $test (-100,100)
    $test := 0
    declare $id
    $id := get_ui_id($test)
    set_control_par($id,$CONTROL_PAR_MOUSE_BEHAVIOUR,2000)
    set_control_par($id,$CONTROL_PAR_DEFAULT_VALUE,0)
    set_control_par_str($id,$CONTROL_PAR_PICTURE,"K4_SLIDER_BIP_1")
end on
```

**See Also**

ui_knob
set_control_par()
$CONTROL_PAR_MOUSE_BEHAVIOUR
ui_switch

declare ui_switch $<variable-name>

create a user interface switch

Remarks

• a switch (i.e. its callback) is triggered when clicking the mouse (aka mouse-down)
• a switch can be automated

Examples

on init
    declare ui_switch $rec_button
    set_text ($rec_button,"Record")
    declare $rec_button_id
    $rec_button_id:= get_ui_id ($rec_button)
    set_control_par ($rec_button_id,SCONTROL_PAR_WIDTH,60)
    set_control_par ($rec_button_id,SCONTROL_PAR_HEIGHT,20)
    set_control_par ($rec_button_id,SCONTROL_PAR_TEXT_ALIGNMENT,1)
    set_control_par ($rec_button_id,SCONTROL_PAR_POS_X,250)
    set_control_par ($rec_button_id,SCONTROL_PAR_POS_Y,5)
end on

switch with various settings utilizing set_control_par()

See Also

ui_button
**ui_table**

```
declare ui_table %<array>[columns](<width>,<height>,<range>)
```

create a user interface table

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;width&gt;</td>
<td>the width of the table in grid units</td>
</tr>
<tr>
<td>&lt;height&gt;</td>
<td>the height of the table in grid units</td>
</tr>
<tr>
<td>&lt;range&gt;</td>
<td>the range of the table. If negative values are used, a bipolar table is created</td>
</tr>
</tbody>
</table>

**Examples**

```plaintext
on init
    declare ui_table %table_uni[10] (2,2,100)
    declare ui_table %table_bi[10] (2,2,-100)
end on

unipolar and bipolar tables
```

```plaintext
on init
    declare ui_table %table[128] (5,2,100)
    declare ui_value_edit $Steps (1,127,1)
    $Steps := 16
    set_table_steps_shown (%table,$Steps)
end on

on ui_control ($Steps)
    set_table_steps_shown (%table,$Steps)
end on

changes the amount of shown steps (columns) in a table
```

**See Also**

- set_table_steps_shown()
- $NI_CONTROL_PAR_IDX
**ui_text_edit**

<table>
<thead>
<tr>
<th>declare ui_text_edit @&lt;variable-name&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>create a text edit field</td>
</tr>
</tbody>
</table>

**Examples**

```plaintext
on init
    declare ui_text_edit @label_name
    make_persistent(@label_name)

    set_control_par_str(get_ui_id(@label_name),$CONTROL_PAR_TEXT,"empty")
    set_control_par(get_ui_id(@label_name),$CONTROL_PAR_FONT_TYPE,25)
    set_control_par(get_ui_id(@label_name),$CONTROL_PAR_POS_X,73)
    set_control_par(get_ui_id(@label_name),$CONTROL_PAR_POS_Y,2)

    declare ui_label $pattern_lbl(1,1)
    set_text($pattern_lbl,"")
    move_control_px($pattern_lbl,66,2)
end on

on ui_control (@label_name)
    message(@label_name & " it is!")
end on
```

*a text edit field on top of a label*

**See Also**

@ (string variable)
ui_value_edit

```plaintext
declare ui_value_edit <$variable>(<min>,<max>,<$display-ratio>)
```

create a user interface number box

<table>
<thead>
<tr>
<th>&lt;min&gt;</th>
<th>the minimum value of the value edit</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;max&gt;</td>
<td>the maximum value of the value edit</td>
</tr>
<tr>
<td>&lt;display-ratio&gt;</td>
<td>the value is divided by &lt;display-ratio&gt; for display purposes</td>
</tr>
</tbody>
</table>

You can also use $VALUE_EDIT_MODE_NOTE_NAMES to display note names instead of numbers.

Examples

```plaintext
on init
    declare ui_value_edit $test (0,100,$VALUE_EDIT_MODE_NOTE_NAMES)
    set_text ($test,"")
    set_control_par (get_ui_id($test),$CONTROL_PAR_WIDTH,45)
    move_control_px($test,66,2)
end on

on note
    $test := $EVENT_NOTE
end on

value edit displaying note names

on init
    declare ui_value_edit $test (0,10000,1000)
    set_text ($test,"Value")
end on

value edit with three decimal spaces

See Also

$VALUE_EDIT_MODE_NOTE_NAMES
$CONTROL_PAR_SHOW_ARROWS
ui_waveform

```c
declare ui_waveform $<variable>({width}, {height})
```

create a waveform control to display zones and slices. Can also be used to control specific parameters per slice and for MIDI drag & drop functionality.

- `<width>`: the width of the waveform in grid units
- `<height>`: the height of the waveform in grid units

### Examples

```ksp
on init
    declare ui_waveform $Waveform(6,6)
    attach_zone ($Waveform, find_zone("Test"), 0)
end on

displays the zone “Test” within the waveform control
```

ui_xy

declare ui_xy <array>[num-of-elements]
create an XY pad

Remarks

- The range of each axis on the XY pad is always between 0.0 and 1.0.
- The number of cursors in the XY pad (i.e. the interactible elements) is defined by the size of the array. Each index in the array represents one axis of one cursor, so two indices are needed for each cursor. Applying this, if you wanted to create an XY pad with 3 cursors, then the size of the XY array would be 6 elements.
- The maximum size of the XY array is 32 elements, and so the maximum number of cursors in the XY pad is 16.
- The even indices of the array hold the X axis value of the cursors, and the odd indices hold the Y axis values. So index 0 is the X value of the first cursor, and index 1 is the Y value of the first cursor.
- It is possible to define how the XY pad reacts to mouse interaction using the $CONTROL_PAR_MOUSE_MODE parameter.

Examples

on init

{basic initialization}
message(""")
make_perfview

set_ui_color(9ddddddd)
set_ui_height_px(350)

{create an XY pad with 2 cursors}
declare ui_xy myXY[4]

{store the UI ID of the XY pad}
declare $xyID
$xyID := get_ui_id(myXY)

{skinning the cursors}
set_control_par_str_arr($xyID, $CONTROL_PAR_CURSOR_PICTURE, "Picture1", 0)
set_control_par_str_arr($xyID, $CONTROL_PAR_CURSOR_PICTURE, "Picture2", 2)

{set automation IDs and names}
set_control_par_arr($xyID, $CONTROL_PAR_AUTOMATION_ID, 0, 0)
set_control_par_arr($xyID, $CONTROL_PAR_AUTOMATION_ID, 1, 1)
set_control_par_arr($xyID, $CONTROL_PAR_AUTOMATION_ID, 2, 2)
set_control_par_arr($xyID, $CONTROL_PAR_AUTOMATION_ID, 3, 3)
set_control_par_str_arr($xyID, $CONTROL_PAR_AUTOMATION_NAME, ... "Cutoff", 0)
set_control_par_str_arr($xyID, $CONTROL_PAR_AUTOMATION_NAME, ... "Resonance", 1)
set_control_par_str_arr($xyID, $CONTROL_PAR_AUTOMATION_NAME, ... "Delay Pan", 2)
set_control_par_str_arr($xyID, $CONTROL_PAR_AUTOMATION_NAME, ... "Delay Feedback", 3)

{define the mouse behaviour}
set_control_par($xyID, $CONTROL_PAR_MOUSE_MODE, 0)
set_control_par($xyID, $CONTROL_PAR_MOUSE_BEHAVIOUR_X, 1000)
set_control_par($xyID, $CONTROL_PAR_MOUSE_BEHAVIOUR_Y, 1000)

{position and size}
set_control_par($xyID, $CONTROL_PAR_POS_X, 50)
set_control_par($xyID, $CONTROL_PAR_POS_Y, 50)
set_control_par($xyID, $CONTROL_PAR_WIDTH, 200)
set_control_par($xyID, $CONTROL_PAR_HEIGHT, 200)

{move the cursors to the center of the XY pad}
?myXY[0] := 0.5 {1st cursor, X axis}
?myXY[1] := 0.5 {1st cursor, Y axis}
?myXY[2] := 0.5 {2nd cursor, X axis}
?myXY[3] := 0.5 {2nd cursor, Y axis}

end on

creating an XY pad control with two cursors, custom cursor images, and automation information

Control Statements

if…else…end if

A conditional if statement

Examples

on controller
  if (in_range($CC_NUM,0,127))
    message("CC Number: ": $CC_NUM": Value: " & %CC[$CC_NUM])
  else
    if ($CC_NUM = $VCC_PITCH_BEND)
      message("Pitch bend": Value: " & %CC[$CC_NUM])
    end if
    if ($CC_NUM = $VCC_MONO_AT)
      message("Channel Pressure": Value: " & %CC[$CC_NUM])
    end if
  end if
end on

display different messages depending on the controller number.

See Also

select()
select()

```plaintext
select(<variable>)...end select
```

select statement

**Remarks**

- The `select` statement is similar to the `if` statement, except that it has an arbitrary number of branches. The expression after the select keyword is evaluated and matched against the single case branches, the first case branch that matches is executed.
- The case branches may consist of either a single constant number or a number range (expressed by the term 'x to y').

**Examples**

```plaintext
on controller
  if ($CC_NUM = $VCC_PITCH_BEND)
    select (%CC[$VCC_PITCH_BEND])
      case -8192 to -1
        message("Pitch Bend down")
      case 0
        message("Pitch Bend center")
      case 1 to 8191
        message("Pitch Bend up")
    end select
  end if
end on
```

*query the state of the pitch bend wheel*

Boolean Operators

<table>
<thead>
<tr>
<th>Operator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>x &gt; y</td>
<td>greater than</td>
</tr>
<tr>
<td>x &gt; y</td>
<td>less than</td>
</tr>
<tr>
<td>x &gt;= y</td>
<td>greater than or equal</td>
</tr>
<tr>
<td>x &lt;= y</td>
<td>less than or equal</td>
</tr>
<tr>
<td>x = y</td>
<td>equal</td>
</tr>
<tr>
<td>x # y</td>
<td>not equal</td>
</tr>
<tr>
<td>in_range(x, y, z)</td>
<td>true if x is between y and z</td>
</tr>
<tr>
<td>not a</td>
<td>true if a is false and vice versa</td>
</tr>
<tr>
<td>a and b</td>
<td>true if a is true and b is true</td>
</tr>
<tr>
<td>a or b</td>
<td>true if a is true or b is true</td>
</tr>
</tbody>
</table>

Remarks

- Boolean operators are used in if and while statements, since they return if the condition is either true or false. In the list above, x, y and z denote numerals, a and b stand for Boolean values.
Arithmetic Commands & Operators

Basic Operators

<table>
<thead>
<tr>
<th>Basic operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>The following operators work on both integers and real numbers.</td>
</tr>
<tr>
<td>$x := y$</td>
</tr>
<tr>
<td>$x + y$</td>
</tr>
<tr>
<td>$x - y$</td>
</tr>
<tr>
<td>$x \times y$</td>
</tr>
<tr>
<td>$x / y$</td>
</tr>
<tr>
<td>$-x$</td>
</tr>
<tr>
<td>$\text{abs}(x)$</td>
</tr>
</tbody>
</table>

Integer Operators & Commands

The following commands and operators can only be performed on integer variables and values.

<table>
<thead>
<tr>
<th>inc($x$)</th>
</tr>
</thead>
<tbody>
<tr>
<td>increment an expression by 1 ($x + 1$)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>dec($x$)</th>
</tr>
</thead>
<tbody>
<tr>
<td>decrement an expression by 1 ($x - 1$)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>$x \mod y$</th>
</tr>
</thead>
<tbody>
<tr>
<td>modulo; returns the remainder of a division</td>
</tr>
<tr>
<td>e.g. 13 mod 8 returns the value 5</td>
</tr>
</tbody>
</table>

Real Number Commands

The following commands can only be performed on real numbers.

<table>
<thead>
<tr>
<th>exp($x$)</th>
</tr>
</thead>
<tbody>
<tr>
<td>exponential function (returns the value of $e^x$)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>log($x$)</th>
</tr>
</thead>
<tbody>
<tr>
<td>logarithmic function</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>pow($x$, $y$)</th>
</tr>
</thead>
<tbody>
<tr>
<td>power (returns the value of $x^y$)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>sqrt($x$)</th>
</tr>
</thead>
<tbody>
<tr>
<td>square root</td>
</tr>
</tbody>
</table>
Rounding Commands

Rounding commands can only be performed on real numbers.

\[ \text{ceil}(x) \]
ceiling (round up)
\[ \text{ceil}(2.3) = 3.0 \]

\[ \text{floor}(x) \]
floor (round down)
\[ \text{floor}(2.8) = 2.0 \]

\[ \text{round}(x) \]
round (round to nearest)
\[ \text{round}(2.3) = 2.0 \]
\[ \text{round}(2.8) = 3.0 \]

Trigonometric Commands

Trigonometric commands can only be performed on real numbers.

\[ \cos(x) \]
cosine function

\[ \sin(x) \]
sine function

\[ \tan(x) \]
tangent function

\[ \operatorname{acos}(x) \]
arcosine (inverse cosine function)

\[ \operatorname{asin}(x) \]
arcsine (inverse sine function)

\[ \operatorname{atan}(x) \]
arctangent (inverse tangent function)
**Bit Operators**

The following bit operators can be used:

<table>
<thead>
<tr>
<th>Bit Operators</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>x .and. y</td>
<td>bitwise and</td>
</tr>
<tr>
<td>x .or. y</td>
<td>bitwise or</td>
</tr>
<tr>
<td>.not. x</td>
<td>bitwise negation</td>
</tr>
<tr>
<td>sh_left(&lt;expression&gt;,&lt;shift-bits&gt;)</td>
<td>shifts the bits in &lt;expression&gt; by the amount of &lt;shift-bits&gt; to the left</td>
</tr>
<tr>
<td>sh_right(&lt;expression&gt;,&lt;shift-bits&gt;)</td>
<td>shifts the bits in &lt;expression&gt; by the amount of &lt;shift-bits&gt; to the right</td>
</tr>
</tbody>
</table>
random()

random(<min>,<max>)
generate a random integer in the range <min> to <max>

Examples

on init
    declare $rnd_amt
    declare $new_vel
end on

on note
    $rnd_amt := $EVENT_VELOCITY * 10/100
    $new_vel := random($EVENT_VELOCITY-$rnd_amt,$EVENT_VELOCITY+$rnd_amt)
    change_velo($EVENT_ID,$new_vel)
end on

randomly changing velocities in by ±10 percent
int_to_real()

<table>
<thead>
<tr>
<th>int_to_real(&lt;integer value&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>converts an integer value into a real number</td>
</tr>
</tbody>
</table>

Examples

```ksp
on init
    declare ~velocity Disp
end on

on note
    ~velocity Disp := int_to_real($EVENT_VELOCITY)/127.0
    message(~velocity Disp)
end on
displays the event velocity in the range 0.0 to 1.0
```

See Also

real_to_int()
real_to_int()

real_to_int(<real value>)
converts a real number into an integer

Remarks

- Using this process without any rounding function will cause the real value to be truncated, so performing this function both 2.2 and 2.8 will return an integer value of 2

Examples

on init
    declare $test_int
    declare ~test_real := 2.8

    $test_int := real_to_int(~test_real)
    message($test_int)
end on

converting a variable from real to integer and then displaying it

See Also

int_to_real()
round()
ceil()
floor()
msb()

```
msb(<value>)
```

return the MSB portion (most significant byte) of a 14 bit value

**Examples**

```
on rpn
  message(msb($RPN_VALUE))
end on

commonly used when working with rpn and nrpn messages
```

```
on init
  declare ui_value_edit $Value (0,16383,1)
end on

on ui_control ($Value)
  message("MSB: " & msb($Value) & " - LSB: " & lsb($Value))
end on

Understanding MSB and LSB
```

**See Also**

```
lsb()
$RPN_ADDRESS
$RPN_VALUE
```
**lsb()**

```plaintext
lsb(<value>)
```

return the LSB portion (least significant byte) of a 14 bit value

---

**Examples**

```plaintext
on rpn
    message(lsb($RPN_VALUE))
end on

commonly used when working with rpn and nrpn messages
```

```plaintext
on init
    declare ui_value_edit $Value (0,16383,1)
end on

on ui_control ($Value)
    message("MSB: " & msb($Value) & " - LSB: " & lsb($Value))
end on

Understanding MSB and LSB
```

**See Also**

- `msb()`
- `$RPN_ADDRESS`
- `$RPN_VALUE`
General Commands

exit

exit
immediately stops a callback or exits a function

Remarks

- exit is a very strong command. Be careful when using it, especially when dealing with larger scripts.
- If used with a function, exit only quits the function but not the entire callback.

Examples

```plaintext
on note
    if (not(in_range($EVENT_NOTE,60,71)))
        exit
    end if
{from here on, only notes between C3 to B3 will be processed}
end on
```

useful for quickly setting up key ranges to be affected by the script

See Also

wait()
stop_wait()
ignore_controller

ignore_controller
ignore a controller event in a controller callback

Examples

on controller
    if ($CC_NUM = 1)
        ignore_controller
        set_controller($VCC_MONO_AT,%CC[1])
    end if
end on

transform the mod wheel into aftertouch

See Also

ignore_event()
set_controller()
on controller
message()

message(<variable/text>)

display text in the status line of KONTAKT

Remarks

- The message command is intended to be used for debugging and testing while programming a script. Since there is only one status line in KONTAKT, it should not be used as a generic means of communication with the user, use a label instead.
- Make it a habit to write message("") at the start of the init callback. You can then be sure that all previous messages (by the script or by the system) are deleted and you see only new messages.
- Messages defined in the init callback will only be displayed if the user manually applies the script by clicking on the APPLY button. These messages will not be displayed when an instrument loads and initializes the script automatically.

Examples

on init
    message("Hello, world!"
end on

the inevitable implementation of "Hello, world!" in KSP

on note
    message("Note " & $EVENT_NOTE & " received at " & ...
        $ENGINE_UPTIME & " millisecond")
end on

concatenating elements in a message() command

See Also

$ENGINE_UPTIME
$KSP_TIMER
reset_ksp_timer
declare ui_label
set_text()
note_off()

<table>
<thead>
<tr>
<th>note_off(&lt;ID-number&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>send a note off message to a specific note</td>
</tr>
<tr>
<td>&lt;ID-number&gt;</td>
</tr>
</tbody>
</table>

Remarks

- `note_off()` is equivalent to releasing a key, thus it will always trigger a release callback as well as the release portion of a volume envelope. Notice the difference between `note_off()` and `fade_out()`, since `fade_out()` works on a voice level.

Examples

on controller
  if ($CC_NUM = 1)
    note_off($ALL_EVENTS)
  end if
end on

a custom "All Notes Off" implementation triggered by the mod wheel

on init
  declare polyphonic $new_id
end on

on note
  ignore_event($EVENT_ID)
  $new_id := play_note($EVENT_NOTE,$EVENT_VELOCITY,0,0)
end on

on release
  ignore_event($EVENT_ID)
  wait(200000)
  note_off($new_id)
end on

delaying the release of each note by 200ms

See Also

`fade_out()`
`play_note()`
play_note()

```
play_note(<note-number>,<velocity>,<sample-offset>,<duration>)
```

generate a MIDI note, i.e. generate a note on message followed by a note off message

- `<note-number>`: the note number to be generated (0 - 127)
- `<velocity>`: velocity of the generated note (1 - 127)
- `<sample-offset>`: sample offset in microseconds
- `<duration>`: length of the generated note in microseconds

This parameter also accepts two special values:
- `-1`: releasing the note which started the callback stops the sample
- `0`: the entire sample is played

Remarks

- In DFD mode, the sample offset is dependent on the Sample Mod (S.Mod) value of the respective zones. Sample offset value greater than the zone’s S.Mod setting will be ignored and no sample offset will be applied.
- You can retrieve the event ID of the played note in a variable by writing:
  ```
  <variable> := play_note(<note>,<velocity>,<sample-offset>,<duration>)
  ```

Examples

```
on note
  play_note($EVENT_NOTE+12,$EVENT_VELOCITY,0,-1)
end on
```

harmonizes the played note with the upper octave

```
on init
  declare $new_id
end on
non controller
  if ($CC_NUM = 64)
    if ($CC[64] = 127)
      $new_id := play_note(60,100,0,0)
    else
      note_off($new_id)
    end if
  end if
end on
```

trigger a MIDI note by pressing the sustain pedal

See Also

```
note_off()
```
set_controller()

\[
\text{set_controller}(\text{<controller>}, \text{<value>})
\]

send a MIDI CC, pitchbend or channel pressure value

\[
\begin{array}{|c|l|
\hline
\text{<controller>} & \text{this parameter sets the type and in the case of MIDI CCs the CC number:} \\
\hline
 & \bullet \text{a number from 0 to 127 designates a MIDI CC number} \\
 & \bullet \$VCC\_PITCH\_BEND \text{ indicates Pitchbend} \\
 & \bullet \$VCC\_MONO\_AT \text{ indicates Channel Pressure (monophonic aftertouch)} \\
\hline
\text{<value>} & \text{the value of the specified controller} \\
\hline
\end{array}
\]

MIDI CC and channel pressure values go from 0 to 127
PitchBend values go from -8192 to 8191

Remarks

- \text{set_controller()} \text{ should not be used within an init callback.}

Examples

on note
  if ($EVENT\_NOTE = 36)
    ignore_event($EVENT\_ID)
    set_controller($VCC\_MONO\_AT,$EVENT\_VELOCITY)
  end if
end on

on release
  if ($EVENT\_NOTE = 36)
    ignore_event($EVENT\_ID)
    set_controller($VCC\_MONO\_AT,0)
  end if
end on

\text{Got a keyboard with no aftertouch? Press C1 instead.}

See Also

\begin{itemize}
\item \text{ignore_controller}
\item \$VCC\_PITCH\_BEND
\item \$VCC\_MONO\_AT
\end{itemize}
set_rpn()/set_nrpn

```plaintext
set_rpn(<address>,<value>)
```

send a rpn or nrpn message

<table>
<thead>
<tr>
<th>&lt;address&gt;</th>
<th>the rpn or nrpn address (0 - 16383)</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;value&gt;</td>
<td>the value of the rpn or nrpn message (0 - 16383)</td>
</tr>
</tbody>
</table>

Remarks

- KONTAKT cannot handle rpn on nrpn messages as external modulation sources. You can however use these message for simple inter-script communication.

See Also

- on rpn/nrpn
- set_controller
- $RPN_ADDRESS
- $RPN_VALUE
- msb()
- lsb()
set_snapshot_type()

set_snapshot_type(<type>)

configures the KSP processor behavior of all five slots when a snapshot is recalled

<table>
<thead>
<tr>
<th>&lt;type&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>0: the init callback will always be executed upon snapshot change, afterwards the on persistence_changed callback will be executed (default behavior)</td>
</tr>
<tr>
<td>1: the init callback will not be executed upon loading a snapshot, only the on persistence_callback will be executed</td>
</tr>
</tbody>
</table>

Remarks

- This command acts globally, i.e. it can applied in any script slot.
- In snapshot type 1, the value of a non persistent and instrument persistence variable is preserved.
- Loading a snapshot always resets KONTAKT's audio engine, i.e. audio is stopped and all active events are deleted.

Examples

on init
    set_snapshot_type(1)
    declare ui_knob $knob_1 (0,127,1)
    set_text($knob_1,"Knob")
    make_persistent($knob_1)
    declare ui_button $gui_btn
    set_text($gui_btn,"Page 1")
end on
function show_gui
    if ($gui_btn = 1)
        set_control_par(get_ui_id($knob_1),$CONTROL_PAR_HIDE,...
            $HIDE_PART_NOTHING)
    else
        set_control_par(get_ui_id($knob_1),$CONTROL_PAR_HIDE,$HIDE_WHOLE_CONTROL)
    end if
end function
on persistence_changed
    call show_gui
end on
on ui_control ($gui_btn)
    call show_gui
end on

retaining the GUI upon loading snapshots

on persistence_changed
Event Commands

by_marks()<br><br>by_marks(<bit-mark>)<br>a user defined group of events (or event IDs)<br><br>Remarks<br><br>by_marks() is a user defined group of events which can be set with set_event_mark(). It can be used with all commands which utilize event IDs like note_off(), change_tune() etc.<br><br>Examples<br><br>on note<br>  if ($EVENT_NOTE mod 12 = 0) {if played note is a c}<br>    set_event_mark($EVENT_ID,$MARK_1)<br>    change_tune(by_marks($MARK_1),%CC[1]*1000,0)<br>  end if<br>end on<br><br>on controller<br>  if($CC_NUM = 1)<br    change_tune(by_marks($MARK_1),%CC[1]*1000,0)<br  end if<br>end on<br><br>moving the mod wheel changes the tuning of all c's (C-2, C-1...C8)<br><br>See Also<br><br>set_event_mark()<br>$EVENT_ID<br>$ALL_EVENTS<br>$MARK_1 ... $MARK_28
**change_note()**

<table>
<thead>
<tr>
<th>change_note(&lt;ID-number&gt;,&lt;note-number&gt;)</th>
</tr>
</thead>
</table>

change the note number of a specific note event

**Remarks**

- `change_note()` is only allowed in the note callback and only works before the first `wait()` statement. If the voice is already running, only the value of the variable changes.
- once the note number of a particular note event is changed, it becomes the new `$EVENT_NOTE`
- it is not possible to address events via event groups like `ALL_EVENTS`

**Examples**

```ksp
on init
    declare %black_keys[5] := (1,3,6,8,10)
end on

on note
    if (search(%black_keys,$EVENT_NOTE mod 12) # -1)
        change_note($EVENT_ID,$EVENT_NOTE-1)
    end if
end on

constrain all notes to white keys, i.e. C major
```

**See Also**

`$EVENT_NOTE`
`change_velo()`
change_pan()

<table>
<thead>
<tr>
<th>change_pan(&lt;ID-number&gt;,&lt;panorama&gt;,&lt;relative-bit&gt;)</th>
</tr>
</thead>
</table>

change the pan position of a specific note event

<table>
<thead>
<tr>
<th>&lt;ID-number&gt;</th>
<th>the ID number of the note event to be changed</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;panorama&gt;</td>
<td>the pan position of the note event, from -1000 (left) to 1000 (right)</td>
</tr>
<tr>
<td>&lt;relative-bit&gt;</td>
<td>If the relative bit is set to 0, the amount is <strong>absolute</strong>, i.e. the amount overwrites any previous set values of that event. If set to 1, the amount is <strong>relative</strong> to the actual value of the event. The different implications are only relevant with more than one change_pan() statement applied to the same event.</td>
</tr>
</tbody>
</table>

Remarks

- change_pan() works on a note event level and does not change any panorama settings in the instrument itself. It is also not related to any MIDI modulations regarding panorama.

Examples

```plaintext
on init
  declare $pan_position
end on
on note
  $pan_position := ($EVENT_NOTE * 2000 / 127) - 1000
  change_pan ($EVENT_ID,$pan_position,0)
end on
panning the entire key range from left to right, i.e. C-2 all the way left, G8 all the way right

on note
  if ($EVENT_NOTE < 60)
    change_pan ($EVENT_ID,1000,0)
    wait(500000)
    change_pan ($EVENT_ID,-1000,0) {absolute, pan is at -1000}
  else
    change_pan ($EVENT_ID,1000,1)
    wait(500000)
    change_pan ($EVENT_ID,-1000,1) {relative, pan is at 0}
  end if
end on
notes below C3 utilize a relative-bit of 0, C3 and above utilize a relative bit of 1
```

See Also

change_vol()
change_tune()
**change_tune()**

```
change_tune(<ID-number>,<tune-amount>,<relative-bit>)
```

change the tuning of a specific note event in millicent

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;ID-number&gt;</td>
<td>the ID number of the note event to be changed</td>
</tr>
<tr>
<td>&lt;tune-amount&gt;</td>
<td>the tune amount in millicents, so 100000 equals 100 cent (i.e. a half tone)</td>
</tr>
<tr>
<td>&lt;relative-bit&gt;</td>
<td>If the relative bit is set to 0, the amount is <strong>absolute</strong>, i.e. the amount overwrites any previous set values of that event. If it is set to 1, the amount is <strong>relative</strong> to the actual value of the event. The different implications are only relevant with more than one <code>change_tune()</code> statement applied to the same event.</td>
</tr>
</tbody>
</table>

**Remarks**

- `change_tune()` works on a note event level and does not change any tune settings in the instrument itself. It is also not related to any MIDI modulations regarding tuning.

**Examples**

```plaintext
on init
    declare $tune_amount
end on

on note
    $tune_amount := random(-50000,50000)
    change_tune ($EVENT_ID,$tune_amount,1)
end on
```

randomly detune each note by ± 50 cent

**See Also**

- `change_vol()`
- `change_pan()`
change_velo()

change_velo(<ID-number>,<velocity>)
change the velocity of a specific note event

Remarks

- change_velo() is only allowed in the note callback and only works before the first wait() statement. If the voice is already running, only the value of the variable changes.
- once the velocity of a particular note event is changed, it becomes the new $EVENT_VELOCITY
- it is not possible to address events via event groups like $ALL_EVENTS

Examples

on note
    change_velo ($EVENT_ID,100)
    message($EVENT_VELOCITY)
end on
all velocities are set to 100. Note that $EVENT_VELOCITY will also change to 100.

See Also

$EVENT_VELOCITY

**change_vol()**

<table>
<thead>
<tr>
<th>change_vol(&lt;ID-number&gt;,&lt;volume&gt;,&lt;relative-bit&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>change the volume of a specific note event in millidecibel</td>
</tr>
</tbody>
</table>

| <ID-number> | the ID number of the note event to be changed |
| <volume>    | the volume change in millidecibel |
| <relative-bit> | If the relative bit is set to 0, the amount is **absolute**, i.e. the amount overwrites any previous set values of that event. If it is set to 1, the amount is **relative** to the actual value of the event. |

The different implications are only relevant with more than one change_vol() statement applied to the same event.

**Remarks**

- **change_vol()** works on a note event level and does not change any tune settings in the instrument itself. It is also not related to any MIDI modulations regarding volume (e.g. MIDI CC7).

**Examples**

```plaintext
on init
  declare $vol_amount
end on

on note
  $vol_amount := (($EVENT_VELOCITY - 1) * 12000/126) - 6000
  change_vol ($EVENT_ID,$vol_amount,1)
end on
```

*a simple dynamic expander: lightly played notes will be softer, harder played notes will be louder*

by_marks()
$EVENT_ID$
$ALL_EVENTS$
$MARK_1$ ... $MARK_28$
**event_status()**

```
event_status(<ID-number>)
```

retrieve the status of a particular note event (or MIDI event in the multi script)

The note can either be active, then this function returns
$EVENT_STATUS_NOTE_QUEUE  (or $EVENT_STATUS_MIDI_QUEUE in the multi script)

or inactive, then the function returns
$EVENT_STATUS_INACTIVE

**Remarks**

**event_status()** can be used to find out if a note event is still "alive" or not.

**Examples**

```
on init
    declare %key_id[128]
end on

on note
    if (event_status(%key_id[$EVENT_NOTE]) = $EVENT_STATUS_NOTE_QUEUE)
        fade_out(%key_id[$EVENT_NOTE],10000,1)
    end if
    %key_id[$EVENT_NOTE] := $EVENT_ID
end on
```

*limit the number of active note events to one per MIDI key*

**See Also**

$EVENT_STATUS_MIDI_QUEUE
get_event_ids()
# fade_in()

\[ \text{fade}\_\text{in}(<\text{ID}\text{-number}>, <\text{fade}\text{-time}>) \]

perform a fade-in for a specific note event

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;ID-number&gt;</td>
<td>the ID number of the note event to be faded in</td>
</tr>
<tr>
<td>&lt;fade-time&gt;</td>
<td>the fade-in time in microseconds</td>
</tr>
</tbody>
</table>

## Examples

```plaintext
on init
    declare $note_1_id
    declare $note_2_id
end on

on note
    $note_1_id := \text{play}\_\text{note}($EVENT\_\text{NOTE}+12,$EVENT\_\text{VELOCITY},0,-1)
    $note_2_id := \text{play}\_\text{note}($EVENT\_\text{NOTE}+19,$EVENT\_\text{VELOCITY},0,-1)
    \text{fade}\_\text{in} ($note_1_id,1000000)
    \text{fade}\_\text{in} ($note_2_id,5000000)
end on

fading in the first two harmonics
```

## See Also

- change_vol()
- fade_out()
**fade_out()**

```
fade_out(<ID-number>,<fade-time>,<stop-voice>)
```

perform a fade-out for a specific note event

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;ID-number&gt;</td>
<td>the ID number of the note event to be faded in</td>
</tr>
<tr>
<td>&lt;fade-time&gt;</td>
<td>the fade-in time in microseconds</td>
</tr>
<tr>
<td>&lt;stop-voice&gt;</td>
<td>If set to 1, the voice is stopped after the fade out. If set to 0, the voice will still be running after the fade out</td>
</tr>
</tbody>
</table>

**Examples**

```on controller
if ($CC_NUM = 1)
  if (%CC[1] mod 2 # 0)
    fade_out($ALL_EVENTS,5000,0)
  else
    fade_in($ALL_EVENTS,5000)
  end if
end if
end on
```

*use the mod wheel on held notes to create a stutter effect*

```on controller
if ($CC_NUM = 1)
  fade_out($ALL_EVENTS,5000,1)
end if
end on
```

*a custom "All Sound Off" implementation triggered by the mod wheel*

**See Also**

change_vol()

fade_in()
get_event_ids()

get_event_ids(<array-name>)

fills the specified array with all active event IDs. The command overwrites all existing values as long as there are events and writes 0 if no events are active anymore.

<array-name>  array to be filled with active event IDs

Examples

on init
    declare const $ARRAY_SIZE := 500
    declare %test_array[$ARRAY_SIZE]
    declare $a
    declare $note_count
end on

on note
    get_event_ids(%test_array)
    $a := 0
    $note_count := 0
    while($a < $ARRAY_SIZE and %test_array[$a] # 0)
        inc($note_count)
        inc($a)
    end while
    message("Active Events: " & $note_count)
end on

monitoring the number of active events

See Also

event_status()
ignore_event()
**get_event_par()**

```
get_event_par(<ID-number>,<parameter>)
```

return the value of a specific event parameter of the specified event

<table>
<thead>
<tr>
<th>&lt;ID-number&gt;</th>
<th>the ID number of the event</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>the event parameter, either one of four freely assignable event parameter:</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_0</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_1</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_2</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_3</td>
</tr>
<tr>
<td></td>
<td>or the &quot;built-in&quot; parameters of a note event:</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_VOLUME</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_PAN</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_TUNE</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_NOTE</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_VELOCITY</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_SOURCE</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_PLAY_POS</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_ZONE_ID</td>
</tr>
</tbody>
</table>

**Remarks**

A note event always carries certain information like the note number, the played velocity, but also Volume, Pan and Tune. With `set_event_par()`, you can set either these parameters or use the freely assignable parameters like `$EVENT_PAR_0`. This is especially useful when chaining scripts, i.e. set an event parameter for an event in slot 1, then retrieve this information in slot 2 by using `get_event_par()`.

**Examples**

(see next page)
on note
  message(get_event_par(EVENT_ID,EVENT_PAR_NOTE))
end on
the same functionality as message(EVENT_NOTE)

on note
  message(get_event_par(EVENT_ID,EVENT_PAR_SOURCE))
end on
check if the event comes from outside (-1) or if it was created in one of the five script slots (0-4)

on note
  wait(1)
  message(get_event_par(EVENT_ID,EVENT_PAR_ZONE_ID))
end on

Note that in the above example, an event itself does not carry a zone ID (only a voice has zone IDs), therefore you need to insert `wait(1)` in order to retrieve the zone ID.

set_event_par()
ignore_event()
set_event_par_arr()
get_event_par_arr()
get_event_par_arr()

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>get_event_par_arr(&lt;ID-number&gt;,&lt;parameter&gt;,&lt;group-index&gt;)</td>
<td>special form of get_event_par(), used to retrieve the group allow state of the specified event</td>
</tr>
<tr>
<td>&lt;ID-number&gt;</td>
<td>the ID number of the note event</td>
</tr>
<tr>
<td>&lt;parameter&gt;</td>
<td>in this case, only $EVENT_PAR_ALLOW_GROUP</td>
</tr>
<tr>
<td>&lt;group-index&gt;</td>
<td>the index of the group for retrieving the specified note's group allow state</td>
</tr>
</tbody>
</table>

Remarks

- get_event_par_arr() is a special form (or to be more precise, it's the array variant) of get_event_par(). It is used to retrieve the allow state of a specific event. If will return 1, if the specified group is allowed and 0 if it's disallowed.

Examples

```plaintext
on init
    declare $count
    declare ui_label $label (2,4)
    set_text ($label,"")
end on

on note
    set_text($label,"")
    $count := 0
    while ($count < $NUM_GROUPS)
        if (get_event_par_arr($EVENT_ID,$EVENT_PAR_ALLOW_GROUP,$count) = 1)
            add_text_line($label,"Group ID " & $count & " allowed")
        else
            add_text_line($label,"Group ID " & $count & " disallowed")
        end if
        inc($count)
    end while
end on

a simple group monitor
```

See Also

set_event_par_arr()
get_event_par()$EVENT_PAR_ALLOW_GROUP%GROUPS_AFFECTED
ignore_event()

ignore_event(<ID-number>)
ignore a note event in a note on or note off callback

Remarks

- If you ignore an event, any volume, tune or pan information is lost. You can however retrieve this information with get_event_par(), see the two examples below.

- ignore_event() is a very "strong" command. Always check if you can get the same results with the various change_xxx() commands without having to ignore the event.

Examples

```
on note
  ignore_event($EVENT_ID)
  wait (500000)
  play_note($EVENT_NOTE,$EVENT_VELOCITY,0,-1)
end on
```
delaying all notes by 0.5s. Not bad, but if you for example insert a microtuner before this script, the tuning information will be lost

```
on init
  declare $new_id
end on

on note
  ignore_event($EVENT_ID)
  wait (500000)
  $new_id := play_note($EVENT_NOTE,$EVENT_VELOCITY,0,-1)
  change_vol($new_id,get_event_par($EVENT_ID,$EVENT_PAR_VOLUME),1)
  change_tune($new_id,get_event_par($EVENT_ID,$EVENT_PAR_TUNE),1)
  change_pan($new_id,get_event_par($EVENT_ID,$EVENT_PAR_PAN),1)
end on
```
better: the tuning (plus volume and pan to be precise) information is retrieved and applied to the played note

See Also

ignore_controller
get_event_par()
set_event_mark()

```
set_event_mark(<ID-number>,<bit-mark>)
```

assign the specified event to a specific event group

<ID-number> the ID number of the event to be grouped
<bit-mark> here you can enter one of 28 marks from $MARK_1$ to $MARK_28$ which is assigned to the event. You can also assign more than one mark to a single event, either by typing the command or by using the operator +.

Remarks

When dealing with commands that deal with event IDs, you can group events by using by_marks(<bit-mark>) instead of the individual ID, since the program needs to know that you want to address marks and not IDs.

Examples

```
on init
  declare $new_id
end on

on note
  set_event_mark($EVENT_ID,$MARK_1)
  $new_id := play_note($EVENT_NOTE + 12,120,0,-1)
  set_event_mark($new_id,$MARK_1 + $MARK_2)
  change_pan(by_marks($MARK_1),-1000,1) {both notes panned to left}
  change_pan(by_marks($MARK_2), 2000,1) {new note panned to right}
end on
```

the played note belongs to group 1, the harmonized belongs to group 1 and group 2

See Also

by_marks()
delete_event_mark()$EVENT_ID$ALL_EVENTS$MARK_1 ... $MARK_28
set_event_par()

set_event_par(<ID-number>,<parameter>,<value>)

assign a parameter to a specific event

<table>
<thead>
<tr>
<th>&lt;ID-number&gt;</th>
<th>the ID number of the event</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>the event parameter, either one of four freely assignable event parameters:</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_0</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_1</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_2</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_3</td>
</tr>
<tr>
<td></td>
<td>or the &quot;built-in&quot; parameters of a note event:</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_VOLUME</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_PAN</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_TUNE</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_NOTE</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_VELOCITY</td>
</tr>
<tr>
<td>&lt;value&gt;</td>
<td>the value of the event parameter</td>
</tr>
</tbody>
</table>

Remarks

A note event always "carries" certain information like the note number, the played velocity, but also Volume, Pan and Tune. With set_event_par(), you can set either these parameters or use the freely assignable parameters like $EVENT_PAR_0. This is especially useful when chaining scripts, i.e. set an event parameter for an event in slot 1, then retrieve this information in slot 2 by using get_event_par(). The event parameters are not influenced by the system scripts anymore.

Examples

on note
    set_event_par($EVENT_ID,$EVENT_PAR_NOTE,60)
end on

setting all notes to middle C3, same as change_note($EVENT_ID,60)

See Also

get_event_par()

get_event_par_arr()
**set_event_par_arr()**

<table>
<thead>
<tr>
<th>set_event_par_arr(&lt;ID-number&gt;,&lt;parameter&gt;,&lt;value&gt;,&lt;groupindex&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>special form of set_event_par(), used to set the group allow state of the specified event</td>
</tr>
<tr>
<td><strong>&lt;ID-number&gt;</strong></td>
</tr>
<tr>
<td><strong>&lt;parameter&gt;</strong></td>
</tr>
<tr>
<td><strong>&lt;value&gt;</strong></td>
</tr>
<tr>
<td><strong>&lt;group-index&gt;</strong></td>
</tr>
</tbody>
</table>

**Remarks**

- set_event_par_arr() is a special form (or to be more precise, it's the array variant) of set_event_par(). It is used to set the allow state of a specific event.

**Examples**

```plaintext
on note
    if (get_event_par_arr($EVENT_ID,$EVENT_PAR_ALLOW_GROUP,0) = 0)
        set_event_par_arr($EVENT_ID,$EVENT_PAR_ALLOW_GROUP,1,0)
    end if
end on

making sure, that the first group is always played
```

**See Also**

- allow_group()
- disallow_group()
- get_event_par_arr()
- set_event_par()
- $EVENT_PAR_ALLOW_GROUP
Array Commands

array_equal()

array_equal(<array-variable>,<array-variable>)

checks the values of two arrays, true if all values are equal, false if not

Remarks

This command does not work with arrays of real numbers.

Examples

on init
    declare %array_1[10]
    declare %array_2[11]

    if (array_equal(%array_1,%array_2))
        message($ENGINE_UPTIME)
    end if
end on

this script will produce an error message since the two arrays don't have the same size

See Also

sort()
num_elements()
search()
**num_elements()**

<table>
<thead>
<tr>
<th>num_elements(&lt;array-variable&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>returns the number of elements in an array</td>
</tr>
</tbody>
</table>

**Remarks**

With this function you can, e.g., check how many groups are affected by the current event by using `num_elements(%GROUPS_AFFECTED)`.

**Examples**

```plaintext
on note
  message(num_elements(%GROUPS_AFFECTED))
end on
```

*outputs the number of groups playing*

**See Also**

- `array_equal()`
- `sort()`
- `search()`
- `%GROUPS_AFFECTED`
search()

search(<array-variable>,<value>)

searches the specified array for the specified value and returns the index of its first position. If the value is not found, the function returns -1

Remarks

This command does not work with arrays of real numbers.

Examples

on init
    declare ui_table %array[10] (2,2,5)
    declare ui_button $check
    set_text ($check,"Zero present?")
end on

on ui_control ($check)
    if (search(%array,0) = -1)
        message("No")
    else
        message("Yes")
    end if
    $check := 0
end on

checking if a specific value is present

See Also

array_equal()
num_elements()
sort()
sort()

**sort(<array-variable>,<direction>)**

sorts an array in ascending or descending order.

With direction = 0, the array is sorted in ascending order
With direction ≠ 0, the array is sorted in descending order

**Examples**

```plaintext
on init
    declare $count
    declare ui_table %array[128] (3,3,127)
    while ($count < 128)
        %array[$count] := $count
        inc($count)
    end while
    declare ui_button $Invert

end on

on ui_control ($Invert)
    sort(%array,$Invert)
end on

quickly inverting a linear curve display
```

**See Also**

array_equal()
num_elements()
sort()
Group Commands

allow_group()

```plaintext
allow_group(<group-index>)
```

allows the specified group, i.e. makes it available for playback

Remarks

- The numbering of the group index is zero based, i.e. the first group has the group index 0.
- The groups can only be changed if the voice is not running.

Examples

```plaintext
on note
  disallow_group($ALL_GROUPS)
  allow_group(0)
end on

only the first group will play back
```

See Also

$ALL_GROUPS
$EVENT_PAR_ALLOW_GROUP
disallow_group()
set_event_par_arr()
disallow_group()

<table>
<thead>
<tr>
<th>disallow_group(&lt;group-index&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>disallows the specified group, i.e. makes it unavailable for playback</td>
</tr>
</tbody>
</table>

Remarks

- The numbering of the group index is zero based, i.e. the first group has the group index 0.
- The groups can only be changed if the voice is not running.

Examples

```plaintext
on init
    declare $count
    declare ui_menu $groups_menu

    add_menu_item ($groups_menu,"Play All","-1")
    while ($count < $NUM_GROUPS)
        add_menu_item ($groups_menu,"Mute: " & group_name($count),$count)
        inc($count)
    end while
end on

on note
    if ($groups_menu # -1)
        disallow_group($groups_menu)
    end if
end on

muting one specific group of an instrument
```

See Also

$ALL_GROUPS
$EVENT_PAR_ALLOW_GROUP
allow_group()
set_event_par_arr()
find_group()  

<table>
<thead>
<tr>
<th>find_group(&lt;group-name&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>returns the group index for the specified group name</td>
</tr>
</tbody>
</table>

Remarks

If no group with the specified name is found, this command will return the value zero. This can cause problems as this is the group index of the first group, so be careful when using this command.

Examples

```plaintext
on note
    disallow_group(find_group("Accordion"))
end on

A simple, yet useful script
```

See Also

allow_group()  
disallow_group  
group_name()
get_purge_state()

get_purge_state(<group-index>)

returns the purge state of the specified group:
0: the group is purged (0)
1: the group is not purged, i.e. the samples are loaded

Examples

on init
    declare ui_button $purge
    declare ui_button $checkpurge
    set_text ($purge,"Purge 1st Group")
    set_text ($checkpurge,"Check purge status")
end on

on ui_control ($purge)
    purge_group(0,abs($purge-1))
end on

on ui_control ($checkpurge)
    if (get_purge_state(0) = 0)
        message("Group is purged.")
    else
        message("Group is not purged.")
    end if
end on

a simple purge check

See Also

purge_group()
group_name()

**group_name(<group-index>)**

returns the group name for the specified group

**Remarks**

The numbering of the group index is zero based, i.e. the first group has the group index 0.

**Examples**

```
on init
    declare $count
    declare ui_menu $groups_menu

    $count := 0
    while ($count < $NUM_GROUPS)
        add_menu_item ($groups_menu,group_name($count),$count)
        inc($count)
    end while
end on
```

*quickly creating a menu with all available groups*

```
on init
    declare $count
    declare ui_label $label (2,6)
    set_text($label,’””)
end on

on note
    $count := 0
    while ($count < num_elements(%GROUPS_AFFECTED))
        add_text_line($label,group_name(%GROUPS_AFFECTED[$count]))
        inc($count)
    end while
end on
```

*display the names of the sounding groups*

**See Also**

$ALL_GROUPS
$NUM_GROUPS
allow_group()
Disallow_group()
find_group()
output_channel_name()
purge_group()

```
purge_group(<group-index>,<mode>)
```

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>&lt;group-index&gt;</strong></td>
<td>the index number of the group which contains the samples to be purged</td>
</tr>
<tr>
<td><strong>&lt;mode&gt;</strong></td>
<td>If set to 0, the samples of the specified group are unloaded.</td>
</tr>
<tr>
<td></td>
<td>If set to 1, the samples are reloaded.</td>
</tr>
</tbody>
</table>

Remarks

- When using `purge_group()` in a while loop, don’t use any wait commands within the loop.
- `purge_group()` can only be used in an ui and persistence_changed callback
- It is recommended to not use the `purge_group()` command in the callback of an automatable control.

Examples

```
on init
  declare ui_button $purge
  set_text ($purge,"Purge 1st Group")
end on

on ui_control ($purge)
  purge_group(0,abs($purge-1))
end on

unloading all samples of the first group
```

See Also

`get_purge_state`
Time-Related Commands

change_listener_par()

Changes the parameters of the on listener callback. Can be used in every callback.

\[
\text{change_listener_par}(\text{signal-type}, \text{parameter})
\]

- **signal-type**: The signal to be changed, can be either:
  - `$NI_SIGNAL_TIMER_MS`
  - `$NI_SIGNAL_TIMER_BEAT`

- **parameter**: Depending on the specified signal type:
  - `$NI_SIGNAL_TIMER_MS`
    time interval in microseconds
  - `$NI_SIGNAL_TIMER_BEAT`
    time interval in fractions of a beat/quarter note

Examples

```plaintext
on init
  declare ui_value_edit $Tempo (20,300,1)
  $Tempo := 120

  declare ui_switch $Play

  set_listener($NI_SIGNAL_TIMER_MS, 60000000 / $Tempo)
end on

on listener
  if ($NI_SIGNAL_TYPE = $NI_SIGNAL_TIMER_MS and $Play = 1)
    play_note(60,127,0,$DURATION_EIGHTH)
  end if
end on

on ui_control($Tempo)
  change_listener_par($NI_SIGNAL_TIMER_MS, 60000000 / $Tempo)
end on

a very basic metronome

See Also

- `set_listener()`
- `$NI_SIGNAL_TYPE`
ms_to_ticks()

**ms_to_ticks(<microseconds>)**

converts a microseconds value into a tempo dependent ticks value

**Examples**

```ksp
on init
    declare ui_label $bpm(1,1)
    set_text($bpm,ms_to_ticks(60000000)/960)
end on

displaying the current host tempo
```

**See Also**

ticks_to_ms()
$NI_SONG_POSITION
**set_listener()**

```
set_listener(<signal-type>,<parameter>)
```

Sets the signals on which the listener callback should react to. Can only be used in the init callback.

- `<signal-type>`: the event on which the listener callback should react. The following types are available:

  - `$NI_SIGNAL_TRANSP_STOP`
  - `$NI_SIGNAL_TRANSP_START`
  - `$NI_SIGNAL_TIMER_MS`
  - `$NI_SIGNAL_TIMER_BEAT`

- `<parameter>`: user defined parameter, dependant on the specified signal type:

  - `$NI_SIGNAL_TIMER_MS` time interval in microseconds
  - `$NI_SIGNAL_TIMER_BEAT` time interval in fractions of a beat/quarter note
  - `$NI_SIGNAL_TRANSP_START` set to 1 if the listener callback should react to the host's transport start command
  - `$NI_SIGNAL_TRANSP_STOP` set to 1 if the listener callback should react to the host's transport stop command

**Remarks**

When using `$NI_SIGNAL_TIMER_BEAT`, the maximum resolution is 24 ticks per beat/quarter note.

**Examples**

```plaintext
on init
  set_listener($NI_SIGNAL_TIMER_BEAT,1)
end on
on listener
  if ($NI_SIGNAL_TYPE = $NI_SIGNAL_TIMER_BEAT)
    message($ENGINE_UPTIME)
  end if
end on
```

triggering the listener callback every beat – also gets triggered even when transport is stopped

**See Also**

`change_listener_par()`

`$NI_SIGNAL_TYPE`
stop_wait()

```plaintext
stop_wait(<callback-ID>,<parameter>)
```

stops wait commands in the specified callback

<table>
<thead>
<tr>
<th>&lt;callback-ID&gt;</th>
<th>the callback's ID number in which the wait commands will be stopped</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>0: stops only the current wait</td>
</tr>
<tr>
<td></td>
<td>1: stops the current wait and ignores all following wait commands in this callback</td>
</tr>
</tbody>
</table>

Remarks

- Be careful with while loops when stopping all wait commands in a callback.

Examples

```plaintext
on init
    declare ui_button $Play
    declare $id
end on
on ui_control ($Play)
    if ($Play = 1)
        $id := $NI_CALLBACK_ID
        play_note(60,127,0,$DURATION_QUARTER)
        wait($DURATION_QUARTER)
        if ($Play = 1)
            play_note(64,127,0,$DURATION_QUARTER)
        end if
        wait($DURATION_QUARTER)
        if ($Play = 1)
            play_note(67,127,0,$DURATION_QUARTER)
        end if
    else
        stop_wait($id,1)
        fade_out($ALL_EVENTS,10000,1)
    end if
end on
```

the Play button triggers a simple triad arpeggio – without the stop_wait() command, parallel callbacks could occur when pressing the Play button quickly after each other resulting in multiple arpeggios

wait()
wait_ticks()
Callback Type Variables and Constants (Built-in variables/Specific)
reset_ksp_timer

<table>
<thead>
<tr>
<th>reset_ksp_timer</th>
</tr>
</thead>
<tbody>
<tr>
<td>resets the KSP timer ($KSP_TIMER) to zero</td>
</tr>
</tbody>
</table>

Remarks

- Since the built-in variable $KSP_TIMER returns the engine uptime in microseconds (instead of milliseconds as with $ENGINE_UPTIME), the variable $KSP_TIMER will reach its limit after about 30 minutes due to its 32 bit nature. By using reset_ksp_timer, the variable is reset to 0.

- Since the KSP timer is based on the CPU clock, the main reason to use it is for debugging and optimization. It is a great tool to measure the efficiency of certain script passages. However, it should not be used for ‘musical’ timing, as it remains at a real-time constant rate, even if KONTAKT is being used in an offline bounce.

Examples

```plaintext
on init
  declare $a
  declare $b
  declare $c
end on

on note
  reset_ksp_timer
  $c := 0
  while($c < 128)
    $a := 0
    while($a < 128)
      set_event_par($EVENT_ID,$EVENT_PAR_TUNE,random(-1000,1000))
      inc($a)
    end while
    inc($c)
  end while
  message($KSP_TIMER)
end on

A nested while loop – takes about 5400 to 5800 microseconds
```

See Also

- $ENGINE_UPTIME
- $KSP_TIMER
ticks_to_ms()

<table>
<thead>
<tr>
<th>ticks_to_ms(&lt;ticks&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>converts a tempo dependent ticks value into a microseconds value</td>
</tr>
</tbody>
</table>

**Remarks**

- Since the returned value is in microseconds, the command will reach its limit after about 30 minutes due to its 32 bit nature.

**Examples**

```plaintext
on init
    declare ui_label $label (2,1)
    declare $msec
    declare $sec
    declare $min
    set_listener($NI_SIGNAL_TIMER_MS,1000)
end on

on listener
    if ($NI_SIGNAL_TYPE = $NI_SIGNAL_TIMER_MS)
        $msec := ticks_to_ms($NI_SONG_POSITION)/1000
        $sec := $msec/1000
        $min := $sec/60
        set_text($label,$min & ":" & $sec mod 60 & "." & $msec mod 1000)
    end if
end on

*displaying the song position in real time*

**See Also**

ms_to_ticks()

$NI_SONG_POSITION
wait()

wait(<wait-time>)

pauses the callback for the specified time in microseconds

Remarks

wait() stops the callback at the position in the script for the specified time. In other words, it freezes the callback (although other callbacks can be accessed or processed). After the specified time period the callback continues.

Examples

on note
    ignore_event($EVENT_ID)
    wait($DURATION_BAR - $DISTANCE_BAR_START)
    play_note($EVENT_NOTE,$EVENT_VELOCITY,0,-1)
end on

quantize all notes to the downbeat of the next measure

See Also

stop_wait()
wait_ticks()
while()
$DURATION_QUARTER
wait_ticks()

\[
\text{wait_ticks(<wait-time>)}
\]

pauses the callback for the specified time in ticks

**Remarks**

Same as `wait()`, but with ticks as the wait time parameter.

**See Also**

`stop_wait()`
`wait()`
User Interface Commands

add_menu_item()

```
add_menu_item(<variable>,<text>,<value>)
```

create a menu entry

<table>
<thead>
<tr>
<th>&lt;variable&gt;</th>
<th>the variable of the ui menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;text&gt;</td>
<td>the text of the menu entry</td>
</tr>
<tr>
<td>&lt;value&gt;</td>
<td>the value of the menu entry</td>
</tr>
</tbody>
</table>

Remarks

- You can create menu entries only in the init callback but you can change their text and value afterwards by using `set_menu_item_str()` and `set_menu_item_value()`. You can add as many menu entries as you want and then show or hide them dynamically by using `set_menu_item_visibility()`.
- Using the `$CONTROL_PAR_VALUE` constant in the `get_control_par()` command will return the menu index and not the value, if you want to get the menu value, use the `get_menu_item_value()` command.

Examples

```
on init
    declare ui_menu $menu
    add_menu_item ($menu, "First Entry", 0)
    add_menu_item ($menu, "Second Entry", 1)
    add_menu_item ($menu, "Third Entry", 2)
end on
```

a simple menu

See Also

- `$CONTROL_PAR_SELECTED_ITEM_IDX`
- `$CONTROL_PAR_NUM_ITEMS`
- `get_menu_item_str()`
- `get_menu_item_value()`
- `get_menu_item_visibility()`
- `set_menu_item_str()`
- `set_menu_item_visibility()`
- `ui_menu`
add_text_line()

<table>
<thead>
<tr>
<th>add_text_line(&lt;variable&gt;,&lt;text&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>add a new text line in the specified label without erasing existing text</td>
</tr>
<tr>
<td>&lt;variable&gt;</td>
</tr>
<tr>
<td>&lt;text&gt;</td>
</tr>
</tbody>
</table>

**Examples**

```plaintext
on init
    declare ui_label $label (1,4)
    set_text($label,"")
    declare $count
end on

on note
    inc($count)
    select ($count)
        case 1
            set_text($label, $count & " : " & $EVENT_NOTE)
        case 2 to 4
            add_text_line($label, $count & " : " & $EVENT_NOTE)
        end select
    if ($count = 4)
        $count := 0
    end if
end on
```

*monitoring the last four played notes*

**See Also**

set_text()
ui_label
attach_level_meter()

attach_level_meter(<ui-ID>,<group>,<slot>,<channel>,<bus>)

Attach a level meter to a certain position within the instrument to read volume data.

- **<ui-ID>**
  - the ID number of the level meter

- **<group>**
  - the index of the group you wish to access. Should be set to -1 if not using the group level.

- **<slot>**
  - the index of the fx slot you wish to access. Should be set to -1 if you do not wish to access an fx slot.

- **<channel>**
  - select either the left (0) or right (1) channel.

- **<bus>**
  - the index of the instrument bus you wish to access. Should be set to -1 if you are not accessing the bus level.

Remarks

- Currently, the level meters can only be attached to the output level of the instrument buses and the instrument master. Consequently, the group index and slot index should always be set to -1.

- The instrument volume has the following syntax:
  
  ```
  attach_level_meter (<uiID>,-1,-1,<channelIdx>,-1)
  ```

Examples

```on init
  declare ui_level_meter $Level1
  declare ui_level_meter $Level2
  attach_level_meter (get_ui_id($Level1),-1,-1,0,-1)
  attach_level_meter (get_ui_id($Level2),-1,-1,1,-1)
end on```

Creating two volume meters, each one displaying one side of KONTAKT’s instrument output.

attach_zone()

attach_zone(<variable>,<zone_id>,<flags>)

connects the corresponding zone to the waveform so that it shows up within the display

<table>
<thead>
<tr>
<th>&lt;variable&gt;</th>
<th>the variable of the ui waveform</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;zone_id&gt;</td>
<td>the ID number of the zone that you want to attach to the waveform display</td>
</tr>
<tr>
<td>&lt;flags&gt;</td>
<td>you can control different settings of the UI waveform via its flags. The following flags are available:</td>
</tr>
</tbody>
</table>

$UI_WAVEFORM_USE_SLICES
$UI_WAVEFORM_USE_TABLE
$UI_WAVEFORM_TABLE_IS_BIPOLAR
$UI_WAVEFORM_USE_MIDI_DRAG

Remarks

- Use the bitwise .or. to combine flags.
- The $UI_WAVEFORM_USE_TABLE and $UI_WAVEFORM_USE_MIDI_DRAG flags will only work if $UI_WAVEFORM_USE_SLICES is already set.

Examples

on init
    declare ui_waveform $Waveform(6,6)
    attach_zone ($Waveform,find_zone("Test"),...
        $UI_WAVEFORM_USE_SLICES .or. $UI_WAVEFORM_USE_TABLE)
end on

attaches the zone “Test” to the waveform and displays the zone’s slices and a table

See Also

set_ui_wf_property()
get_ui_wf_property() ui_waveform() find_zone() Waveform Flag Constants Waveform Property Constants
hide_part()

```
hide_part(<variable>,<hide-mask>)
```

hide specific parts of user interface controls

<table>
<thead>
<tr>
<th>&lt;variable&gt;</th>
<th>the name of the ui control</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;hide-mask&gt;</td>
<td>bit by bit combination of the following constants:</td>
</tr>
<tr>
<td></td>
<td>$HIDE_PART_BG [Background of knobs, labels, value edits and tables]</td>
</tr>
<tr>
<td></td>
<td>$HIDE_PART_VALUE [value of knobs]</td>
</tr>
<tr>
<td></td>
<td>$HIDE_PART_TITLE [title of knobs]</td>
</tr>
<tr>
<td></td>
<td>$HIDE_PART_MOD_LIGHT [mod ring light of knobs]</td>
</tr>
</tbody>
</table>

Examples

```
on init
  declare ui_knob $Knob (0,100,1)

  hide_part($Knob,$HIDE_PART_BG...
  .or. $HIDE_PART_MOD_LIGHT...
  .or. $HIDE_PART_TITLE...
  .or. $HIDE_PART_VALUE)
end on
```

a naked knob

```
on init
  declare ui_label $label_1 (1,1)
  set_text ($label_1,"Small Label")
  hide_part ($label_1,$HIDE_PART_BG)
end on
```

hide the background of a label (also possible with other ui elements)

See Also

$CONTROL_PAR_HIDE
$HIDE_PART NOTHING
$HIDE_WHOLE_CONTROL
### fs_get_filename()

**fs_get_filename(<ui-ID>,<return-parameter>)**

return the filename of the last selected file in the UI file browser.

<table>
<thead>
<tr>
<th>&lt;ui-ID&gt;</th>
<th>the ID number of the ui control</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;return-parameter&gt;</td>
<td>0: returns the filename without extension</td>
</tr>
<tr>
<td></td>
<td>1: returns the filename with extension</td>
</tr>
<tr>
<td></td>
<td>2: returns the whole path</td>
</tr>
</tbody>
</table>

**Examples**

**See Also**

- fs_navigate()
- ui_file_selector
**fs_navigate()**

`fs_navigate(<ui-ID>,<direction>)`

Jump to the next/previous file in an ui file selector and trigger its callback.

- `<ui-ID>`: the ID number of the ui control
- `<direction>`: 0: the previous file (in relation to the currently selected one) is selected
  1: the next file (in relation to the currently selected one) is selected

**Examples**

**See Also**

- `fs_get_filename()`
- `ui_file_selector`
get_control_par()

get_control_par(<ui-ID>,<control-parameter>)

retrieve various parameters of the specified gui control

- **<ui-ID>**
  the ID number of the ui control. You can retrieve the ID number with `get_ui_id()`

- **<control-parameter>**
  the control parameter variable, `$CONTROL_PAR_WIDTH`

Remarks

get_control_par() comes in two additional flavors, `get_control_par_str()` for the usage with text strings and `get_control_par_arr()` for working with arrays.

Examples

```ksp
on init
    declare ui_value_edit $Test (0,100,1)
    message(get_control_par(get_ui_id($Test),...
        $CONTROL_PAR_WIDTH))
end on
```

retrieving the width of a value edit in pixels

See Also

- `set_control_par()`
- `$CONTROL_PAR_KEY_SHIFT`
- `$CONTROL_PAR_KEY_ALT`
- `$CONTROL_PAR_KEY_CONTROL`
get_menu_item_str()

get_menu_item_str(<menu-id>,<index>)

returns the string value of the menu’s entry.

<table>
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;menu-id&gt;</td>
<td>the ID of the menu that you want to modify</td>
</tr>
<tr>
<td>&lt;index&gt;</td>
<td>the index (not value) of the menu item</td>
</tr>
</tbody>
</table>
</table>

Remarks

The <index> is defined by the order in which the menu items are added within the init callback; it can’t be changed afterwards.

Examples

```plaintext
on init
    declare ui_menu $menu
    add_menu_item ($menu, "First Entry", 0)
    add_menu_item ($menu, "Second Entry", 5)
    add_menu_item ($menu, "Third Entry", 10)
    declare ui_button $button
end on

on ui_control ($button)
    message(get_menu_item_str (get_ui_id($menu), 1))
end on

displays the message “Second Entry” when clicking on the button
```

See Also

add_menu_item()
get_menu_item_value()
get_menu_item_visibility()
set_menu_item_str()
set_menu_item_value()
set_menu_item_visibility()
get_menu_item_value()

get_menu_item_value(<menu-id>,<index>)
returns the value of the menu’s entry.

<table>
<thead>
<tr>
<th>&lt;menu-id&gt;</th>
<th>the ID of the menu that you want to modify</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;index&gt;</td>
<td>the index of the menu item</td>
</tr>
</tbody>
</table>

Remarks

The <index> is defined by the order in which the menu items are added within the init callback; it can’t be changed afterwards.

Examples

on init
    declare ui_menu $menu
    add_menu_item ($menu, "First Entry",0)
    add_menu_item ($menu, "Second Entry",5)
    add_menu_item ($menu, "Third Entry",10)
    declare ui_button $button
end on

on ui_control ($button)
    message (get_menu_item_value (get_ui_id($menu),1))
end on

displays the number 5

See Also

$CONTROL_PAR_SELECTED_ITEM_IDX

add_menu_item()
get_menu_item_str()
get_menu_item_visibility()
set_menu_item_str()
set_menu_item_value()
set_menu_item_visibility()
get_menu_item_visibility()

get_menu_item_visibility(<menu-id>,<index>)

returns 1 if the menu entry is visible, otherwise 0.

<menu-id> the ID of the menu that you want to modify
<index> the index of the menu entry

Remarks

The <index> is defined by the order in which the menu items are added within the init callback; it can’t be changed afterwards.

Examples

on init
    declare ui_menu $menu
    add_menu_item ($menu, "First Entry",0)
    add_menu_item ($menu, "Second Entry",5)
    add_menu_item ($menu, "Third Entry",10)
    declare ui_button $button
end on

on ui_control ($button)
    message (get_menu_item_visibility (get_ui_id($menu),1))
end on

displays the value 1

set_menu_item_str()
set_menu_item_value()
set_menu_item_visibility()
**get_ui_id()**

```plaintext
get_ui_id(<variable>)
```

retrieves the ID number of an UI control.

**Examples**

```plaintext
on init
    declare ui_knob $Knob_1 (0,100,1)
    declare ui_knob $Knob_2 (0,100,1)
    declare ui_knob $Knob_3 (0,100,1)
    declare ui_knob $Knob_4 (0,100,1)

    declare ui_value_edit $Set (0,100,1)
    declare $a
    declare %knob_id[4]
    %knob_id[0] := get_ui_id ($Knob_1)
    %knob_id[1] := get_ui_id ($Knob_2)
    %knob_id[2] := get_ui_id ($Knob_3)
    %knob_id[3] := get_ui_id ($Knob_4)
end on

on ui_control ($Set)
    $a := 0
    while ($a < 4)
        set_control_par(%knob_id[$a],$CONTROL_PAR_VALUE,$Set)
        inc($a)
    end while
end on
```

*store IDs in an array*

**See Also**

- set_control_par()
- get_control_par()
get_ui_wf_property()

get_ui_wf_property(<variable>,<property>,<index>)

returns the value of the waveform’s different properties.

<variable>
the variable of the ui waveform

<property>
the following properties are available:

$UI_WF_PROP_PLAY_CURSOR
$UI_WF_PROP_FLAGS
$UI_WF_PROP_TABLE_VAL
$UI_WF_PROP_TABLE_IDX_HIGHLIGHT
$UI_WF_PROP_MIDI_DRAG_START_NOTE

<index>
the index of the slice

Examples

on init
   declare $play_pos
   declare ui_waveform $Waveform(6,6)
   attach_zone ($Waveform,find_zone ("Test"),0)
end on

on note
   while ($NOTE_HELD = 1)
      $play_pos := get_event_par($EVENT_ID,$EVENT_PAR_PLAY_POS)
      set_ui_wf_property($Waveform,$UI_WF_PROP_PLAY_CURSOR,...
          0,$play_pos)
      message(get_ui_wf_property($Waveform,...
          $UI_WF_PROP_PLAY_CURSOR,0))
      wait (10000)
   end while
end on

displays the current play position value

Waveform Property Constants
**make_perfview**

<table>
<thead>
<tr>
<th>make_perfview</th>
</tr>
</thead>
<tbody>
<tr>
<td>activates the performance view for the respective script</td>
</tr>
</tbody>
</table>

**Remarks**

- **make_perfview** is only available in the init callback.
- Cannot be used alongside the `connect_view()` command.

**Examples**

```plaintext
on init
    make_perfview
    set_script_title("Performance View")
    set_ui_height(6)
    message(""")
end on

*many performance view scripts start like this*
```

**See Also**

- `set_skin_offset()`
- `set_ui_height()`
- `set_ui_height_px()`
**move_control()**

```
move_control(<variable>,<x-position>,<y-position>)
```

<table>
<thead>
<tr>
<th>position</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ui elements</td>
<td>position ui elements in the standard KONTAKT grid</td>
</tr>
<tr>
<td>&lt;variable&gt;</td>
<td>the name of the ui control</td>
</tr>
<tr>
<td>&lt;x-position&gt;</td>
<td>the horizontal position of the control (0 to 6) in grid units</td>
</tr>
<tr>
<td>&lt;y-position&gt;</td>
<td>the vertical position of the control (0 to 16) in grid units</td>
</tr>
</tbody>
</table>

Remarks

- move_control() can be used in the init and other callbacks.
- Note that the usage of move_control() in other callbacks than the init callback is more cpu intensive, so handle with care.
- move_control(<variable>,0,0) will hide the ui element.

Examples

```kotlin
on init
    set_ui_height(3)
    declare ui_label $label (1,1)
    set_text ($label,"Move the wheel!")
    move_control ($label,3,6)
end on

on controller
    if ($CC_NUM = 1)
        move_control ($label,3,(%CC[1] * (-5) / (127)) + 6 )
    end if
end on
```

move a ui element with the modwheel (why you’d want to do that is up to you)

See Also

move_control_px()  
$CONTROL_PAR_HIDE
move_control_px()

move_control_px(<variable>,<x-position>,<y-position>)

<table>
<thead>
<tr>
<th>position ui elements in pixels</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;variable&gt;</td>
</tr>
<tr>
<td>&lt;x-position&gt;</td>
</tr>
<tr>
<td>&lt;y-position&gt;</td>
</tr>
</tbody>
</table>

Remarks

- Once you position a control in pixels, you have to make all other adjustments in pixels too, i.e. you cannot change between "pixel" and "grid" mode for a specific control.
- move_control_px() can be used in the init and other callbacks.
- Note that the usage of move_control_px() in other callbacks than the init callback is more CPU intensive, so handle with care.
- move_control_px(<variable>,66,2) equals move_control(<variable>,1,1)

Examples

on init
    declare ui_label $label (1,1)
    set_text ($label,"Move the wheel!")
    move_control_px ($label,66,2)
end on

on controller
    if ($CC_NUM = 1)
        move_control_px ($label,%CC[1]+66,2)
    end if
end on

transform cc values into pixel – might be useful for reference

See Also

move_control()
$CONTROL_PAR_POS_X
$CONTROL_PAR_POS_Y
**set_control_help()**

```plaintext
set_control_help(<variable>,<text>)
```

assigns a text string to be displayed when hovering the ui control. The text will appear in KONTAKT's info pane.

| <variable> | the name of the ui control |
| <text>     | the info text to be displayed |

**Examples**

```plaintext
on init
    declare ui_knob $Knob(0,100,1)
    set_control_help($Knob,"I'm the only knob, folks")
end on
```

**See Also**

- `set_script_title()`
- `$CONTROL_PAR_HELP`
**set_control_par()**

**Syntax**

```
set_control_par(<ui-ID>,<control-parameter>,<value>)
```

**Description**

change various parameters of the specified gui control

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;ui-ID&gt;</td>
<td>the ID number of the ui control. You can retrieve the ID number with get_ui_id()</td>
</tr>
<tr>
<td>&lt;control-parameter&gt;</td>
<td>the control parameter variable, for example $CONTROL_PAR_WIDTH</td>
</tr>
<tr>
<td>&lt;value&gt;</td>
<td>the (integer) value</td>
</tr>
</tbody>
</table>

**Remarks**

`set_control_par_str()` is a variation of the command for usage with text strings.

**Examples**

```
on init
    declare ui_value_edit $test (0,100,$VALUE>Edit_MODE_NOTE_NAMES)
    set_text ($test,"")
    set_control_par (get_ui_id($test),$CONTROL_PAR_WIDTH,45)
    move_control_px($test,100,10)
end on
```

changing the width of a value edit to 45 pixels. Note that you have to specify its position in pixels, too, once you enter "pixel-mode".

```
on init
    declare ui_label $test (1,1)
    set_control_par_str(get_ui_id($test),$CONTROL_PAR_TEXT,"This is Text")
    set_control_par(get_ui_id($test),$CONTROL_PAR_TEXT_ALIGNMENT,1)
end on
```

set and center text in lables

**See Also**

`get_control_par()`

`get_ui_id()`
**set_control_par_arr()**

<table>
<thead>
<tr>
<th>set_control_par_arr(&lt;ui-ID&gt;,&lt;control-parameter&gt;,&lt;value&gt;,&lt;index&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>change various parameters of an element within an array based gui control (for example: cursors in the XY pad)</td>
</tr>
<tr>
<td>&lt;ui-ID&gt;</td>
</tr>
<tr>
<td>&lt;control-parameter&gt;</td>
</tr>
<tr>
<td>&lt;value&gt;</td>
</tr>
<tr>
<td>&lt;index&gt;</td>
</tr>
</tbody>
</table>

**Remarks**

`set_control_par_str_arr()` is a variation of the command for usage with text strings.

**Examples**

```on init
  make_perfview
  set_ui_height_px(350)

  declare ui_xy ?myXY[4]
  declare $xyID
  $xyID := get_ui_id(?myXY)

  set_control_par_arr($xyID, $CONTROL_PAR_AUTOMATION_ID, 0, 0)
  set_control_par_arr($xyID, $CONTROL_PAR_AUTOMATION_ID, 1, 1)
  set_control_par_arr($xyID, $CONTROL_PAR_AUTOMATION_ID, 2, 2)
  set_control_par_arr($xyID, $CONTROL_PAR_AUTOMATION_ID, 3, 3)

  set_control_par_str_arr($xyID, $CONTROL_PAR_AUTOMATION_NAME, ..., "Cutoff", 0)
  set_control_par_str_arr($xyID, $CONTROL_PAR_AUTOMATION_NAME, ..., "Resonance", 1)
  set_control_par_str_arr($xyID, $CONTROL_PAR_AUTOMATION_NAME, ..., "Delay Pan", 2)
  set_control_par_str_arr($xyID, $CONTROL_PAR_AUTOMATION_NAME, ..., "Delay Feedback", 3)
end on```

*setting automation IDs and names of an XY pad with two cursors*

**See Also**

$CONTROL_PAR_AUTOMATION_ID  
$CONTROL_PAR_AUTOMATION_NAME  
$HIDE_PART_CURSOR
**set_knob_defval()**

`set_knob_defval(<variable>,<value>)`

assign a default value to a knob to which the knob is reset when Cmd-clicking (mac) or Ctrl-clicking (PC) the knob.

**Remarks**

In order to assign a default value to a slider, use
`set_control_par(<ui-ID>,$CONTROL_PAR_DEFAULT_VALUE,<value>)`

**Examples**

```
on init
    declare ui_knob $Knob(-100,100,0)
    set_knob_defval ($Knob,0)
    $Knob := 0

    declare ui_slider $Slider (-100,100)
    set_control_par(get_ui_id($Slider),$CONTROL_PAR_DEFAULT_VALUE,0)
    $Slider := 0
end on
```

assigning default values to a knob and slider

**See Also**

`$CONTROL_PAR_DEFAULT_VALUE`
**set_knob_label()**

<table>
<thead>
<tr>
<th>set_knob_label(&lt;variable&gt;,&lt;text&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>assign a text string to a knob</td>
</tr>
</tbody>
</table>

**Examples**

```plaintext
on init
    declare !rate_names[18]
    !rate_names[0] := "1/128"
    !rate_names[1] := "1/64"
    !rate_names[2] := "1/32"
    !rate_names[3] := "1/16 T"
    !rate_names[4] := "3/64"
    !rate_names[5] := "1/16"
    !rate_names[6] := "1/8 T"
    !rate_names[8] := "1/8"
    !rate_names[9] := "1/4 T"
    !rate_names[10] := "3/16"
    !rate_names[12] := "1/2 T"
    !rate_names[14] := "1/2"
    !rate_names[16] := "4/4"
    !rate_names[17] := "Bar"

declare ui_knob $Rate (0,17,1)
    set_knob_label($Rate,!rate_names[$Rate])

read_persistent_var($Rate)
    set_knob_label($Rate,!rate_names[$Rate])
end on

on ui_control ($Rate)
    set_knob_label($Rate,!rate_names[$Rate])
end on

useful for displaying rhythmical values
```

**See Also**

$CONTROL_PAR_LABEL
set_knob_unit()

```
set_knob_unit(<variable>,<knob-unit-constant>)
```

assign a unit mark to a knob.

The following constants are available:

$\text{KNOB\_UNIT\_NONE}$
$\text{KNOB\_UNIT\_DB}$
$\text{KNOB\_UNIT\_HZ}$
$\text{KNOB\_UNIT\_PERCENT}$
$\text{KNOB\_UNIT\_MS}$
$\text{KNOB\_UNIT\_OCT}$
$\text{KNOB\_UNIT\_ST}$

Examples

```plaintext
on init
    declare ui_knob $Time (0,1000,10)
    set_knob_unit ($Time,$KNOB\_UNIT\_MS)

    declare ui_knob $Octave (1,6,1)
    set_knob_unit ($Octave,$KNOB\_UNIT\_OCT)

    declare ui_knob $Volume (-600,600,100)
    set_knob_unit ($Volume,$KNOB\_UNIT\_DB)

    declare ui_knob $Scale (0,100,1)
    set_knob_unit ($Scale,$KNOB\_UNIT\_PERCENT)

    declare ui_knob $Tune (4300,4500,10)
    set_knob_unit ($Tune,$KNOB\_UNIT\_HZ)
end on
```

various knob unit marks

**set_menu_item_str()**

<table>
<thead>
<tr>
<th>set_menu_item_str(&lt;menu-id&gt;,&lt;index&gt;,&lt;string&gt;)</th>
<th>sets the value of a menu entry.</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;menu-id&gt;</td>
<td>the ID of the menu that you want to modify</td>
</tr>
<tr>
<td>&lt;index&gt;</td>
<td>the index of the menu item</td>
</tr>
<tr>
<td>&lt;string&gt;</td>
<td>the text you wish to set for the selected menu item</td>
</tr>
</tbody>
</table>

**Remarks**

The `<index>` is defined by the order in which the menu items are added within the init callback; it can't be changed afterwards.

**Examples**

```on init
    declare ui_menu $menu
    declare ui_button $button
    add_menu_item ($menu, "First Entry",0)
    add_menu_item ($menu, "Second Entry",5)
    add_menu_item ($menu, "Third Entry",10)
end on

on ui_control ($button)
    set_menu_item_str (get_ui_id($menu),1,"Renamed")
end on
renaming the second menu entry```

**See Also**

- `$CONTROL_PAR_SELECTED_ITEM_IDX`
- `$CONTROL_PAR_NUM_ITEMS`
- `add_menu_item()`
- `get_menu_item_str()`
- `get_menu_item_value()`
- `get_menu_item_visibility()`
- `set_menu_item_value()`
- `set_menu_item_visibility()`
set_menu_item_value()

```
set_menu_item_value(<menu-id>,<index>,<value>)
```

sets the value of a menu entry.

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;menu-id&gt;</td>
<td>the ID of the menu that you want to modify</td>
</tr>
<tr>
<td>&lt;index&gt;</td>
<td>the index of the menu item</td>
</tr>
<tr>
<td>&lt;value&gt;</td>
<td>the value you want to give the menu item</td>
</tr>
</tbody>
</table>

Remarks

The `<index>` is defined by the order in which the menu items are added within the init callback; it can't be changed afterwards. The `<value>` is set by the third parameter of the `add_menu_item()` command.

Examples

```
on init
  declare ui_menu $menu
  add_menu_item ($menu, "First Entry",0)
  add_menu_item ($menu, "Second Entry",5)
  add_menu_item ($menu, "Third Entry",10)
  set_menu_item_value (get_ui_id($menu),1,20)
end on
```

changing the value of the second menu entry to 20

get_menu_item_str()
get_menu_item_value()
get_menu_item_visibility()
set_menu_item_str()
set_menu_item_visibility()
**set_menu_item_visibility()**

<table>
<thead>
<tr>
<th>set_menu_item_visibility(&lt;menu-id&gt;,&lt;index&gt;,&lt;visibility&gt;)</th>
</tr>
</thead>
</table>

sets the visibility of a menu entry.

- `<menu-id>`: the ID of the menu that you want to modify
- `<index>`: the index of the menu item
- `<visibility>`: set to either 0 (invisible) or 1 (visible)

**Remarks**

The `<index>` is defined by the order in which the menu items are added within the init callback; it can't be changed afterwards. The `<value>` is set by the third parameter of the `add_menu_item()` command.

Add as many menu entries as you would possibly need within the init callback and then show or hide them dynamically by using `set_menu_item_visibility()`.

If you set the currently selected menu item to invisible, the item will remain visible until it is no longer selected.

**Examples**

```plaintext
on init
    declare ui_menu $menu
    declare ui_button $button
    add_menu_item ($menu, "First Entry",0)
    add_menu_item ($menu, "Second Entry",5)
    add_menu_item ($menu, "Third Entry",10)
end on

on ui_control ($button)
    set_menu_item_visibility (get_ui_id($menu),1,0)
end on

hiding the second menu entry
```

- `$CONTROL_PAR_NUM_ITEMS`
- `add_menu_item()`
- `get_menu_item_str()`
- `get_menu_item_value()`
- `get_menu_item_visibility()`
- `set_menu_item_str()`
- `set_menu_item_visibility()`
**set_table_steps_shown()**

<table>
<thead>
<tr>
<th>set_table_steps_shown(&lt;variable&gt;,&lt;num-of-steps&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>changes the number of displayed columns in an ui table</td>
</tr>
<tr>
<td>&lt;variable&gt;</td>
</tr>
<tr>
<td>&lt;num-of-steps&gt;</td>
</tr>
</tbody>
</table>

**Examples**

```ksp
on init
    declare ui_table %table[32] (2,2,127)
    declare ui_value_edit $Steps (8,32,1)
    $Steps := 16
    set_table_steps_shown(%table,$Steps)
end on

on ui_control($Steps)
    set_table_steps_shown(%table,$Steps)
end on
```

*changing the number of shown steps*

**See Also**

ui_table
**set_script_title()**

<table>
<thead>
<tr>
<th>set_script_title(&lt;text&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>set the script title</td>
</tr>
</tbody>
</table>

**Remarks**

- This command overrides any manually set script titles.

**Examples**

```plaintext
on init
    make_perfview
    set_script_title("Performance View")
    set_ui_height(6)
    message(""")
end on

many performance view scripts start like this
```

**See Also**

- make_perfview
set_skin_offset()

```plaintext
set_skin_offset(<offset-in-pixel>)
```

offsets the chosen background picture file by the specified number of pixels

Remarks

If a background tga/png graphic file has been selected in the instrument options and it is larger than the maximum height of the performance view, you can use this command to offset the background graphic, thus creating separate backgrounds for each of the script slots while only using one picture file.

Examples

```plaintext
on init
    make_perfview
    set_ui_height(1)
end on

on controller
    if ($CC_NUM = 1)
        set_skin_offset(%CC[1])
    end if
end on
```

*try this with the wallpaper called "Sunrise.tga" (Kontakt 5/presets/wallpaper/Sunrise.tga)*

**set_text()**

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>set_text(&lt;variable&gt;,&lt;text&gt;)</td>
<td>when applied to a label: delete the text currently visible in the specified label and add new text. when applied to knobs, buttons, switches and value edits: set the display name of the ui element.</td>
</tr>
</tbody>
</table>

**Examples**

```ksp
on init
  declare ui_label $label_1 (1,1)
  set_text ($label_1,"Small Label")
  
  declare ui_label $label_2 (3,6)
  set_text ($label_2,"Big Label")
  add_text_line ($label_2,"...with a second text line")
end on

two labels with different size
```

```ksp
on init
  declare ui_label $label_1 (1,1)
  set_text ($label_1,"Small Label")
  hide_part ($label_1,$HIDE_PART_BG)
end on

hide the background of a label (also possible with other ui elements)
```

**See Also**

add_text_line()
$CONTROL_PAR_TEXT
set_control_par_str()
**set_ui_color()**

```plaintext
set_ui_color(<hex value>)
```

set the main background color of the performance view

<hex value> the hexadecimal color value in the following format:

<table>
<thead>
<tr>
<th>Hex Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9ff0000h</td>
<td>red</td>
</tr>
</tbody>
</table>

the 9 at the start is to let KONTAKT know the value is a number, the h at the end is to indicate that it is a hexadecimal value.

**Remarks**

Can be used in all callbacks.

**Examples**

```plaintext
on init
    make_perfview
    set_instrument_color(9000000h)
end on
```

creates a black interface

**See Also**

- `set_ui_height()`
- `set_ui_height_px()`
**set_ui_height()**

```plaintext
set_ui_height(<height>)
```

set the height of a script performance view in grid units

| <height> | the height of script in grid units (1 to 8) |

**Remarks**

Only possible in the init callback.

**Examples**

```plaintext
on init
    make_perfview
    set_script_title("Performance View")
    set_ui_height(6)
    message(""")
end on
```

*many performance view scripts start like this*

**See Also**

set_ui_height_px()
**set_ui_height_px()**

<table>
<thead>
<tr>
<th>set_ui_height_px(&lt;height&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>set the height of a script performance view in pixels</td>
</tr>
<tr>
<td>&lt;height&gt;</td>
</tr>
</tbody>
</table>

**Remarks**

Only possible in the init callback.

**Examples**

```plaintext
on init
    make_perfview
    declare const $SIZE := 1644 {size of tga file}
    declare const $NUM_SLIDES := 4 {amount of slides in tga file}
    declare ui_value_edit $Slide (1,$NUM_SLIDES,1)
    declare const $HEADER_SIZE := 93
    set_ui_height_px(($SIZE/$NUM_SLIDES)-$HEADER_SIZE)
    set_skin_offset (($Slide-1)*($SIZE/$NUM_SLIDES))
end on

on ui_control ($Slide)
    set_skin_offset (($Slide-1)*($SIZE/$NUM_SLIDES))
end on
```

*try this with some of the wallpaper tga files of the Kontakt 4 Factory Library, e.g. /Kontakt 4 Library/Choir/Z - Samples/Wallpaper/pv_choir_bg.tga*

**See Also**

set_ui_height()
set_ui_width_px()
**set_ui_width_px()**

<table>
<thead>
<tr>
<th>set_ui_width_px(&lt;width&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>set the width of a script performance view in pixels</td>
</tr>
<tr>
<td>&lt;width&gt;</td>
</tr>
</tbody>
</table>

**Remarks**

Only possible in the init callback.

**Examples**

```plaintext
on init
    make_perfview
    set_ui_height_px(750)
    set_ui_width_px(1000)
end on
making a performance view with the largest possible dimensions
```

**See Also**

set_ui_height_px()
**set_ui_wf_property()**

```
set_ui_wf_property(<variable>,<property>,<index>,<value>)
```

sets different properties for the waveform control

<table>
<thead>
<tr>
<th>&lt;variable&gt;</th>
<th>the variable of the ui waveform</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;property&gt;</td>
<td>the following properties are available:</td>
</tr>
<tr>
<td></td>
<td>$UI_WF_PROP_PLAY_CURSOR</td>
</tr>
<tr>
<td></td>
<td>$UI_WF_PROP_FLAGS</td>
</tr>
<tr>
<td></td>
<td>$UI_WF_PROP_TABLE_VAL</td>
</tr>
<tr>
<td></td>
<td>$UI_WF_PROP_TABLE_IDX_HIGHLIGHT</td>
</tr>
<tr>
<td></td>
<td>$UI_WF_PROP_MIDI_DRAG_START_NOTE</td>
</tr>
<tr>
<td>&lt;index&gt;</td>
<td>the index of the slice</td>
</tr>
<tr>
<td>&lt;value&gt;</td>
<td>the (integer) value</td>
</tr>
</tbody>
</table>

**Examples**

```ksp
on init
  declare $play_pos
  declare ui_waveform $Waveform(6,6)
  attach_zone ($Waveform, find_zone("Test"), 0)
end on

on note ($NOTE_HELD = 1)
  $play_pos := get_event_par($EVENT_ID,$EVENT_PAR_PLAY_POS)
  set_ui_wf_property($Waveform, $UI_WF_PROP_PLAY_CURSOR,...
    0, $play_pos)
  wait (10000)
end while
end on
```

*attaches the zone “Test” to the waveform and displays a play cursor within the waveform as long as you play a note*

Keyboard Commands

get_key_color()

| get_key_color(<note-nr>) | returns the color constant of the specified note number |

Examples

on init
message(""
declare $count
while ($count < 128)
  set_key_color($count,$KEY_COLOR_INACTIVE)
  inc($count)
end while

declare $random_key
$random_key := random(60,71)

set_key_color($random_key,$KEY_COLOR_RED)
end on

on note
  if (get_key_color($EVENT_NOTE) = $KEY_COLOR_RED)
    message("Bravo!")
    set_key_color($random_key,$KEY_COLOR_INACTIVE)
    $random_key := random(60,71)
    set_key_color($random_key,$KEY_COLOR_RED)
  else
    message("Try again!")
  end if
end on

on release
message(""
end on

catch me if you can

See Also

set_key_color()
get_key_name()

get_key_name(<note-nr>)

returns the name of the specified key

Examples

on init
    declare $count
    while ($count < 128)
        set_key_name($count,""")
        inc($count)
    end while

    set_key_name(60,"Middle C")
end on

on note
    message(get_key_name($EVENT_NOTE))
end on

See Also

set_key_name()
**get_key_triggerstate()**

```plaintext
get_key_triggerstate(<note-nr>)
```

returns the pressed state of the specified note number (i.e. key) on the KONTAKT keyboard, can be either 1 (key pressed) or 0 (key released)

**Remarks**

get_key_triggerstate() works only with set_key_pressed_support() set to 1.

**Examples**

```plaintext
on init
    set_key_pressed_support(1)
end on
on note
    set_key_pressed($EVENT_NOTE,1)
    message(get_key_triggerstate($EVENT_NOTE))
end on
on release
    set_key_pressed($EVENT_NOTE,0)
    message(get_key_triggerstate($EVENT_NOTE))
end on
```

**See Also**

set_key_pressed()
set_key_pressed_support()
get_key_type()

get_key_type(<note-nr>)

returns the key type constant of the specified key.

See Also

set_key_type()
**get_keyrange_min_note()**

<table>
<thead>
<tr>
<th>get_keyrange_min_note(&lt;note-nr&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>returns the lowest note of the specified key range</td>
</tr>
</tbody>
</table>

**Remarks**

Since a key range cannot have overlapping notes, it is sufficient with all `get_keyrange_xxx()` commands to specify the key range with one note number only.

**Examples**

```plaintext
on init
    declare $count
    while ($count < 128)
        remove_keyrange($count)
        inc($count)
    end while
    set_keyrange(36,72,"Middle Range")
end on
on note
    message(get_keyrange_min_note($EVENT_NOTE))
end on
```

**See Also**

`set_keyrange()`
get_keyrange_max_note()

| get_keyrange_max_note(<note-nr>) | returns the highest note of the specified key range |

Remarks

Since a key range cannot have overlapping notes, it is sufficient with all get_keyrange_xxx() commands to specify the key range with one note number only.

Examples

```plaintext
on init
   declare $count
   while ($count < 128)
      remove_keyrange($count)
      inc($count)
   end while
   set_keyrange(36,72,"Middle Range")
end on

on note
   message(get_keyrange_min_note($EVENT_NOTE))
end on
```

See Also

set_keyrange()
get_keyrange_name()

<table>
<thead>
<tr>
<th>get_keyrange_name(&lt;note-nr&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>returns the name of the specified key range</td>
</tr>
</tbody>
</table>

Remarks

Since a key range cannot have overlapping notes, it is sufficient with all get_keyrange_xxx() commands to specify the key range with one note number only.

Examples

```plaintext
on init
    declare $count
    while ($count < 128)
        remove_keyrange($count)
        inc($count)
    end while
    set_keyrange(36,72,"Middle Range")
end on

on note
    message(get_keyrange_name($EVENT_NOTE))
end on
```

See Also

set_keyrange()
**set_key_color()**

```
set_key_color(<note-nr>,<key-color-constant>)
```

sets the color of the specified key (i.e. MIDI note) on the KONTAKT keyboard.

The following colors are available:

- `$KEY_COLOR_RED`
- `$KEY_COLOR_ORANGE`
- `$KEY_COLOR_LIGHT_ORANGE`
- `$KEY_COLOR_WARM_YELLOW`
- `$KEY_COLOR_YELLOW`
- `$KEY_COLOR_LIME`
- `$KEY_COLOR_GREEN`
- `$KEY_COLOR_MINT`
- `$KEY_COLOR_CYAN`
- `$KEY_COLOR_TURQUOISE`
- `$KEY_COLOR_BLUE`
- `$KEY_COLOR_PLUM`
- `$KEY_COLOR_VIOLET`
- `$KEY_COLOR_PURPLE`
- `$KEY_COLOR_MAGENTA`
- `$KEY_COLOR_FUCHSIA`

- `$KEY_COLOR_DEFAULT` (sets the key to KONTAKT's standard color for mapped notes)
- `$KEY_COLOR_INACTIVE` (resets the key to standard black and white)
- `$KEY_COLOR_NONE` (resets the key to its normal KONTAKT color, e.g. red for internal keyswitches)

**Remarks**

The keyboard colors reside outside of KSP, i.e. changing the color of a key is similar to changing a KONTAKT knob with `set_engine_par()`. It is therefore a good practice to set all keys to either `$KEY_COLOR_INACTIVE` or `$KEY_COLOR_NONE` in the init callback or whenever changed later.

**Example**

(see next page)
on init
message('"")
declare ui_button $Color

declare $count
declare $note_count
declare $color_count
declare %white_keys[7] := (0,2,4,5,7,9,11)
declare %colors[16] := (...$KEY_COLOR_RED,$KEY_COLOR_ORANGE,$KEY_COLOR_LIGHT_ORANGE,...$KEY_COLOR_WARM_YELLOW,$KEY_COLOR_YELLOW,$KEY_COLOR_LIME,...$KEY_COLOR_GREEN,$KEY_COLOR_MINT,$KEY_COLOR_CYAN,...$KEY_COLOR_TURQUOISE,$KEY_COLOR_BLUE,$KEY_COLOR_PLUM,...$KEY_COLOR_VIOLET,$KEY_COLOR_PURPLE,$KEY_COLOR_MAGENTA,$KEY_COLOR_FUCHSIA)
$count := 0
while ($count < 128)
  set_key_color($count,$KEY_COLOR_NONE)
  inc($count)
end while
end on

on ui_control ($Color)
if ($Color = 1)
  $count := 0
  while ($count < 128)
    set_key_color($count,$KEY_COLOR_INACTIVE)
    inc($count)
  end while

  $note_count := 0
  $color_count := 0
  while ($color_count < 16)
    if (search(%white_keys,(60 + $note_count) mod 12) # -1)
      set_key_color(60 + $note_count,%colors[$color_count])
      inc ($color_count)
    end if
  inc($note_count)

  end while
else
  $count := 0
  while ($count < 128)
    set_key_color($count,$KEY_COLOR_NONE)
    inc($count)
  end while
end if
end on

See Also

set_keyrange()
set_key_name()

<table>
<thead>
<tr>
<th>set_key_name(&lt;note-nr&gt;,&lt;name&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>assigns a text string to the specified key</td>
</tr>
</tbody>
</table>

Remarks

Key names are instrument parameters and reside outside KSP, i.e. changing the key name is similar to changing a KONTAKT knob with set_engine_par(). Make sure to always reset all key names in the init callback or whenever changed later.

Key names and ranges are displayed in KONTAKT’s info pane when hovering the mouse over the key on the KONTAKT keyboard.

Examples

```plaintext
on init
  declare $count
  while ($count < 128)
    set_key_name($count,"")
    inc($count)
  end while
  set_key_name(60,"Middle C")
end on
```

See Also

set_keyrange()
get_key_name()
set_key_pressed()

```plaintext
set_key_pressed(<note-nr>,<value>)
```

sets the trigger state of the specified key on KONTAKT’s keyboard either to pressed/on (1) or released/off (0)

**Remarks**

By using `set_key_pressed()` in combination with `set_key_pressed_support()` it is possible to show script generated notes on KONTAKT’s keyboard. The typical use case would be if an instrument features an in-built sequencer/harmonizer and the triggered notes should be shown on the keyboard.

**Examples**

```plaintext
on init
    set_key_pressed_support(1)
end on

on note
    set_key_pressed($EVENT NOTE,1)
end on

on release
    set_key_pressed($EVENT NOTE,0)
end on

insert this after an arpeggiator or harmonizer script
```

**See Also**

`set_key_pressed_support()`

`get_key_triggerstate()`
**set_key_pressed_support()**

<table>
<thead>
<tr>
<th>set_key_pressed_support(&lt;mode&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>sets the pressed state support mode for KONTAKT's keyboard. The available modes are:</td>
</tr>
<tr>
<td>0: KONTAKT handles all pressed states, set_key_pressed() commands are ignored (default mode)</td>
</tr>
<tr>
<td>1: KONTAKT's keyboard is only affected by set_key_pressed() commands</td>
</tr>
</tbody>
</table>

**Remarks**

The pressed state mode resides outside KSP, i.e. changing the mode is similar to changing a KONTAKT knob with set_engine_par(). Make sure to always set the desired mode in the init callback.

**Examples**

```plaintext
on init
    declare ui_button $Enable
    set_key_pressed_support(0)
end on

don ui_control ($Enable)
    set_key_pressed_support($Enable)
end on

don note
    play_note($EVENT_NOTE+4,$EVENT_VELOCITY,0,-1)
    play_note($EVENT_NOTE+7,$EVENT_VELOCITY,0,-1)
    set_key_pressed($EVENT_NOTE,1)
    set_key_pressed($EVENT_NOTE+4,1)
    set_key_pressed($EVENT_NOTE+7,1)
end on

don release
    set_key_pressed($EVENT_NOTE,0)
    set_key_pressed($EVENT_NOTE+4,0)
    set_key_pressed($EVENT_NOTE+7,0)
end on

press the button and you'll see what you hear
```

**See Also**

set_key_pressed()
s_get_key_triggerstate()
set_key_type()

```
set_key_type(<note-nr>,<key-type-constant>)
```

assigns a key type to the specified key.

The following key types are available:

- `$NI_KEY_TYPE_DEFAULT` (i.e. normal mapped notes that produce sound)
- `$NI_KEY_TYPE_CONTROL` (i.e. key switches or other notes that do not produce sound)
- `$NI_KEY_TYPE_NONE` (resets the key to its normal KONTAKT behaviour)

Remarks

Setting the key type is useful for supported hosts like KOMPLETE KONTROL, where keys with control functionality (e.g. key switches) should not be affected by any note processing.

Examples

```
on init
    declare $count
    $count := 0
    while ($count < 128)
        set_key_type($count,$NI_KEY_TYPE_NONE)
        inc($count)
    end while
    $count := 36
    while ($count <= 96)
        select ($count)
        case 36 to 47 {e.g. key switch}
            set_key_type($count,$NI_KEY_TYPE_CONTROL)
        end case
        case 48 to 96 {e.g. main notes}
            set_key_type($count,$NI_KEY_TYPE_DEFAULT)
        end case
        inc($count)
    end while
end on
```

See Also

`get_key_type()`
set_keyrange()

```plaintext
set_keyrange(<min-note>,<max-note>,<name>)
```
assigns a text string to the specified range of keys.

Remarks

Key ranges are instrument parameters and reside outside KSP, i.e. changing the key range is similar to changing a KONTAKT knob with `set_engine_par()`. Make sure to always remove all key ranges in the init callback or whenever changed later.

There can be up to 16 key ranges per instrument.

Key names and ranges are displayed in KONTAKT’s info pane when hovering the mouse over the key on the KONTAKT keyboard. The range name is followed by the key name (separated by a dash).

Examples

```plaintext
on init
  declare $count
  while ($count < 128)
    remove_keyrange($count)
    inc($count)
  end while
  set_keyrange(36,72,"Middle Range")
end on
```

set_keyrange()
**Engine Parameter Commands**

**find_mod()**

find_mod(<group-index>,<mod-name>)

returns the slot index of an internal modulator or external modulation slot

<table>
<thead>
<tr>
<th>&lt;group-index&gt;</th>
<th>the index of the group</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;mod-name&gt;</td>
<td>the name of the modulator or modulation slot</td>
</tr>
</tbody>
</table>

Each modulator or modulation slot has a predefined name, based on the modulation source and target.

The name can be changed with the script editor's edit area open and right-clicking on the modulator or modulation slot.

**Examples**

```plaintext
on init
    declare $grp_idx
    $grp_idx := 0

    declare $env_idx
    $env_idx := find_mod(0,"VOL_ENV")

    declare ui_knob $Attack (0,1000000,1)
    set_knob_unit($Attack,$KNOB_UNIT_MS)

    $Attack := get_engine_par($ENGINE_PAR_ATTACK,$grp_idx,$env_idx,-1)

    set_knob_label($Attack,get_engine_par_disp($ENGINE_PAR_ATTACK,$grp_idx,$env_idx,-1))
end on

on ui_control ($Attack)
    set_engine_par($ENGINE_PAR_ATTACK,$Attack,$grp_idx,$env_idx,-1)

    set_knob_label($Attack,get_engine_par_disp($ENGINE_PAR_ATTACK,$grp_idx,$env_idx,-1))
end on

controlling the attack time of the volume envelope of the first group. Note: the envelope has been manually renamed to "VOL_ENV"
```
on init
    declare $count
    declare ui_slider $test (0,1000000)
    $test := get_engine_par($ENGINE_PAR_MOD_TARGET_INTENSITY,0,...
    find_mod(0,"VEL_VOLUME"),-1)
end on

on ui_control ($test)
    $count := 0
    while($count < $NUM_GROUPS)

creating a slider which controls the velocity to volume modulation intensity of all groups

See Also

find_target()
set_engine_par()
**find_target()**

**find_target(<group-index>,<mod-index>,<target-name>)**

returns the slot index of a modulation slot of an internal modulator

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;group-index&gt;</td>
<td>the index of the group</td>
</tr>
<tr>
<td>&lt;mod-index&gt;</td>
<td>the slot index of the internal modulator. Can be retrieved with find_mod(&lt;group-index&gt;,&lt;mod-name&gt;)</td>
</tr>
<tr>
<td>&lt;target-name&gt;</td>
<td>the name of the modulation slot. Each modulation slot has a predefined name, based on the modulation source and target. The name can be changed with the script editor's edit area open and right-clicking on the modulation slot.</td>
</tr>
</tbody>
</table>

**Examples**

```plaintext
on init
    declare ui_knob $Knob (-100,100,1)
    declare $mod_idx
    $mod_idx := find_mod(0,"FILTER_ENV")

    declare $target_idx
    $target_idx := find_target(0,$mod_idx,"ENV_AHDSR_CUTOFF")
end on

on ui_control ($Knob)
    if ($Knob < 0)
        set_engine_par ($MOD_TARGET_INVERT_SOURCE,...
        1,0,$mod_idx,$target_idx)
    else
        set_engine_par ($MOD_TARGET_INVERT_SOURCE,...
        0,0,$mod_idx,$target_idx)
    end if
    set_engine_par($ENGINE_PAR_MOD_TARGET_INTENSITY,...
    abs($Knob*10000),0,$mod_idx,$target_idx)
end on
```

controlling the filter envelope amount of an envelope to filter cutoff modulation in the first group. Note: the filter envelope has been manually renamed to "FILTER_ENV"

### get_engine_par_disp()

**get_engine_par_disp(<parameter>,<group>,<slot>,<generic>)**

returns the displayed string of a specific engine parameter

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>specifies the engine parameter</td>
</tr>
<tr>
<td>&lt;group&gt;</td>
<td>the index (zero based) of the group in which the specified parameter resides. If the specified parameter resides on an <strong>Instrument</strong> level, enter -1.</td>
</tr>
<tr>
<td>&lt;slot&gt;</td>
<td>the slot index (zero based) of the specified parameter (applies only to group/instrument effects, modulators and modulation intensities)</td>
</tr>
<tr>
<td>&lt;generic&gt;</td>
<td>this parameter applies to instrument effects and to internal modulators.</td>
</tr>
</tbody>
</table>

For group/instrument effects, this parameter specifies the slot in which the effect resides (zero-based).

For modulators and modulation intensities, this parameter specifies the index which you can retrieve by using: `find_mod(<group-idx>,<mod-name>)`

For all other applications, set this parameter to -1.

For instrument effects, this parameter distinguishes between
1: Insert Effect
0: Send Effect

For busses, this parameter specifies the actual bus:
$NI_BUS_OFFSET + [0-15]$ one of the 16 busses

For internal modulators, this parameter specifies the modulation slider which you can retrieve by using: `find_target(<group-idx>,<mod-idx>,<target-name>)`

For all other applications, set this parameter to -1.

#### Examples

**on init**
```
declare $a

declare ui_label $label (2,6)
set_text ($label,"Group Volume Settings:")

while ($a < $NUM_GROUPS)
    add_text_line($label,group_name($a) & ": " & ... 
      get_engine_par_disp($ENGINE_PAR_VOLUME,$a,-1,-1) & ": " & " dB")
    inc($a)
end while
end on
```

query the group volume settings in an instrument
get_voice_limit()

get_voice_limit(<voice-type>)

returns the voice limit for the Time Machine Pro mode of the source module

<table>
<thead>
<tr>
<th>&lt;voice-type&gt;</th>
<th>the voice type, can be one one of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>$NI_VL_TMPRO_STANDARD (Standard Mode)</td>
</tr>
<tr>
<td></td>
<td>$NI_VL_TMRPO_HQ (High Quality Mode)</td>
</tr>
</tbody>
</table>

Examples

on init
  declare ui_label $label (3,2)

  add_text_line($label,"Standard Voice Limit: " & ...
  get_voice_limit($NI_VL_TMPRO_STANDARD))

  add_text_line($label,"HQ Voice Limit: " & ...
  get_voice_limit($NI_VL_TMRPO_HQ))
end on

displaying TM Pro voice limits

See Also

set_voice_limit ()
output_channel_name()

output_channel_name(<output-number>)

returns the channel name for the specified output

<output-number> the number of the output channel (zero based, i.e. the first output is 0)

Examples

on init
    declare $count
    declare ui_menu $menu
    add_menu_item($menu,"Default",-1)
    $count := 0
    while($count < $NUM_OUTPUT_CHANNELS)
        add_menu_item($menu,output_channel_name($count),$count)
        inc($count)
    end while
    $menu := get_engine_par($ENGINE_PAR_OUTPUT_CHANNEL,0,-1,-1)
end on

on ui_control ($menu)
    set_engine_par($ENGINE_PAR_OUTPUT_CHANNEL,$menu,0,-1,-1)
end on

mirroring the output channel assignment menu of the first group

See Also

$NUM_OUTPUT_CHANNELS
$ENGINE_PAR_OUTPUT_CHANNEL
set_engine_par()

**set_engine_par(<parameter>,<value>,<group>,<slot>,<generic>)**

control automatable KONTAKT parameters and bypass buttons

- **<parameter>**
  - the parameter to be controlled with a built-in variable, for example
    $ENGINE\_PAR\_CUTOFF

- **<value>**
  - The value to which the specified parameter is set.
    The range of values is always 0 to 1000000, except for switches in which case it is 0 or 1.

- **<group>**
  - the index (zero based) of the group in which the specified parameter resides.
    If the specified parameter resides on an Instrument level, enter -1.
    Busses also reside on Instrument level, so you need to set <group> to -1 if you want to address a bus.

- **<slot>**
  - the slot index (zero based) of the specified parameter (applies only to group/instrument effects, modulators and modulation intensities)
    For group/instrument effects, this parameter specifies the slot in which the effect resides (zero-based).
    For modulators and modulation intensities, this parameter specifies the index which you can retrieve by using:
    find_mod(<group-idx>,<mod-name>)
    For all other applications, set this parameter to -1.

- **<generic>**
  - this parameter applies to instrument effects and to internal modulators.
    For instrument effects, this parameter distinguishes between
    1: Insert Effect
    0: Send Effect
    For busses, this parameter specifies the actual bus:
    $NI\_BUS\_OFFSET + [0-15] one of the 16 busses
    For internal modulators, this parameter specifies the modulation slider which you can retrieve by using
    find_target(<group-idx>,<mod-idx>,<target-name>)
    For all other applications, set this parameter to -1

**Examples**

```
on init
   declare ui_knob $Volume (0,1000000,1000000)
end on
on ui_control ($Volume)
   set_engine_par($ENGINE\_PAR\_VOLUME,$Volume,-1,-1,-1)
end on
```

controlling instrument volume
on init
  declare ui_knob $Freq (0,1000000,1000000)
  declare ui_button $Bypass
end on

on ui_control ($Freq)
  set_engine_par($ENGINE_PAR_CUTOFF,$Freq,0,0,-1)
end on

on ui_control ($Bypass)
  set_engine_par($ENGINE_PAR_EFFECT_BYPASS,$Bypass,0,0,-1)
end on

controlling the cutoff and Bypass button of any filter module in the first slot of the first group

on init
  declare ui_knob $Knob (-100,100,1)
  declare $mod_idx
  $mod_idx := find_mod(0,"FILTER_ENV")
  declare $target_idx
  $target_idx := find_target(0,$mod_idx,"ENV_AHDSR_CUTOFF")
end on

on ui_control ($Knob)
  if ($Knob < 0)
    set_engine_par ($MOD_TARGET_INVERT_SOURCE,0,$mod_idx,$target_idx)
  else
    set_engine_par ($MOD_TARGET_INVERT_SOURCE,0,$mod_idx,$target_idx)
  end if
  set_engine_par($ENGINE_PAR_MOD_TARGET_INTENSITY,...
  abs($Knob*10000),0,$mod_idx,$target_idx)
end on

controlling the filter envelope amount of an envelope to filter cutoff modulation in the first group.
Note: the filter envelope has been manually renamed to "FILTER_ENV"

on init
  declare ui_knob $Vol (-0,1000000,1)
end on

on ui_control ($Vol)
  set_engine_par($ENGINE_PAR_VOLUME,$Vol,-1,-1,$NI_BUS_OFFSET + 15)
end on

controlling the amplifier volume of the 16th bus
### set_voice_limit()

<table>
<thead>
<tr>
<th>set_voice_limit(&lt;voice-type&gt;,&lt;value&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>sets the voice limit for the Time Machine Pro mode of the source module</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>&lt;voice-type&gt;</th>
<th>the voice type, can be one of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>$NI_VL_TMPRO_STANDARD {Standard Mode}</td>
<td></td>
</tr>
<tr>
<td>$NI_VL_TMPRO_HQ {High Quality Mode}</td>
<td></td>
</tr>
</tbody>
</table>

| <value> | the voice limit of the Time Machine Pro mode |

### Remarks

- Changing voice limits is an asynchronous operation. This means, that one cannot reliably access the newly allocated voices immediately after instantiation. To resolve this, the `set_voice_limit()` command returns an `$NI_ASYNC_ID` and triggers the `on async_complete` callback.

### Examples

```
on init
  declare ui_value_edit $Voices (1,8,1)
  make_persistent($Voices)

  declare $change_voices_id
end on

on ui_control ($Voices)
  $change_voices_id := set_voice_limit($NI_VL_TMPRO_STANDARD,$Voices)
end on

on async_complete
  if ($NI_ASYNC_ID = $change_voices_id)
    message("New TM Pro Standard Voice Limit: " & ...
    get_voice_limit($NI_VL_TMPRO_STANDARD))
  end if
end on
```

*changing TM Pro voice limits*

`get_voice_limit()`
Load/Save Commands

General Information

File Formats

It is possible to load and save the following file formats:

- KONTAKT arrays (.nka files)
- MIDI files (.mid) to be used with the MIDI file commands in KSP
- IR samples (.wav) to be used with KONTAKT’s convolution effect (loading only)

Async Handling

Loading and saving files cannot be executed in real time. This is why all load/save commands return a unique value upon completion of their action. You can use this value in combination with $NI_ASYNC_ID and $NI_ASYNC_EXIT_STATUS within the on_async_complete callback to check whether the command has completed its action, and whether or not the loading or saving was successful.

Path Handling

All file paths in KSP use a slash character (/) as a folder separator (backslash characters are not supported). The full path has to start with a slash character “/”:

Examples:

factory folder on OS X:
/Library/Application Support/Native Instruments/Kontakt 5/

factory folder on Windows:
/C:/Program Files/Common Files/Native Instruments/Kontakt 5/

When loading or saving files with an absolute path as opposed to loading from the Resource Container, always use path variables in combination with get_folder().

See Also

$NI_ASYNC_ID
$NI_ASYNC_EXIT_STATUS
on_async_complete
get_folder()

get_folder(<path-variable>)
returns the path specified with the built-in path variable

<table>
<thead>
<tr>
<th>&lt;path-variable&gt;</th>
<th>the following path variables are available:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>$GET_FOLDER_LIBRARY_DIR</td>
</tr>
<tr>
<td></td>
<td>if used with an nki belonging to an encoded library: library folder</td>
</tr>
<tr>
<td></td>
<td>if used with an unencoded nki: the user content directory</td>
</tr>
<tr>
<td></td>
<td>$GET_FOLDER_FACTORY_DIR</td>
</tr>
<tr>
<td></td>
<td>the factory folder of KONTAKT (mainly used for loading factory IR samples)</td>
</tr>
<tr>
<td></td>
<td>Note: this is not the factory library folder!</td>
</tr>
<tr>
<td></td>
<td>$GET_FOLDER_PATCH_DIR</td>
</tr>
<tr>
<td></td>
<td>the directory in which the patch was saved.</td>
</tr>
<tr>
<td></td>
<td>If the patch was not saved before, an empty string is returned.</td>
</tr>
</tbody>
</table>

Remarks

- The behaviour $GET_FOLDER_LIBRARY_DIR changed from KONTAKT 5 on. If the nki belongs to an encoded library, it will point to its library folder. Otherwise, the user content directory is returned.

Examples

on init
message(get_folder($GET_FOLDER_FACTORY_DIR))
end on

displaying the path of the factory folder of KONTAKT

See Also

load_ir_sample()
$GET_FOLDER_LIBRARY_DIR
$GET_FOLDER_FACTORY_DIR
$GET_FOLDER_PATCH_DIR
load_array()

**load_array(<array-variable>,<mode>)**

loads an array from an external file (.nka file)

- `<array-variable>`: the array variable, this name must be present in the .nka file
- `<mode>`: 0: A dialog window pops up, allowing you to select an .nka file. Can only be used in ui, pgs and persistence_changed callbacks.
  1: The array is directly loaded from the "Data" folder. For user instruments, the "Data" folder is located beside the resource container.
  For library instruments, the "Data" folder is located here:
  OS X: `<UserName>/Library/Application Support/<Library Name>/`
  Win: `C:\User\<UserName>\AppData\Local\<Library Name>\`
  Can be used in ui, pgs, init (synchronous) and persistence_changed callbacks.
  2: The array is directly loaded from the "data" folder inside the resource container. Can be used in ui, pgs, init (synchronous) and persistence_changed callbacks.

**Remarks**

- It is also possible to load string arrays from .nka files.
- It is not possible to load an array with `%xyz` in its .nka file into array `%abc`.
- The array data is not directly available after the `load_array()` command has been executed since the command works asynchronous. The only situation in which the values are instantly available is when using mode 1 or mode 2 within an init callback.
- When using mode 0 the callback continues even if the loading dialog is still open.
- Mode 2 is only available for loading arrays, i.e. `save_array()` does not have this option.
- When loading an array within the init callback, please remember that the loaded data will be overwritten at the end of the callback if the array is persistent. Use `read_persistent_var()` before loading the array to avoid this problem.
- .nka files loaded from the resource container should always have a newline character at the end of the file. If this last newline is missing, then KONTAKT will not know the file has ended and will continue to try and load other data from the resources container. Files generated by the `save_array()` command have this automatically, but if you are creating files manually, then this is something to take care of.

**Examples**

(see next page)
on init
    declare $count
    declare ui_button $Load
    declare ui_button $Save
    declare ui_table %table[8] (2,2,100)
    make_persistent(%table)

<td>For busses, this parameter specifies the actual bus:</td>
</tr>
<tr>
<td></td>
<td>$NI_BUS_OFFSET + [0-15] one of the 16 busses</td>
</tr>
</tbody>
</table>

**Remarks**

- Please note that sub directories inside the *ir_samples* folder will not be scanned and it is not recommended to add them manually via text strings. Doing so could lead to problems because subfolders are being ignored during the creation of a Resource Container monolith.

**Examples**

(see next page)
on init
    declare ui_button $Load
    declare $load_ir_id
    $load_ir_id := -1
end on

on ui_control ($Load)
    $load_ir_id := load_ir_sample("Small Ambience.wav",0,0)
    $Load := 0
end on

on async_complete
    if ($NIASYNC_ID = $load_ir_id)
        $load_ir_id := -1
        if ($NIASYNC_EXIT_STATUS = 0)
            message("IR sample not found!")
        else
            message("IR sample loaded!")
        end if
    end if
end on

load an IR sample into a convolution send effect in the first slot

**save_array()**

```markdown
save_array(<array-variable>,<mode>)
```

saves an array to an external file (i.e. an .nka file)

<table>
<thead>
<tr>
<th>&lt;array-variable&gt;</th>
<th>the array to be saved</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;mode&gt;</td>
<td></td>
</tr>
</tbody>
</table>

0: A dialog window pops up, allowing you to save the .nka file. Can only be used in ui, pgs and persistence_changed callbacks.

1: The array is directly loaded from the "Data" folder.

For user instruments, the "Data" folder is located beside the resource container.

For library instruments, the "Data" folder is located here:

OS X: <UserName>/Library/Application Support/<Library Name>/
Win: C:\User\<UserName>\AppData\Local\<Library Name>\`

Can be used in ui, pgs, and persistence_changed callbacks.

**Remarks**

- It is also possible to save string arrays into .nka files.
- The exported .nka file consists of the name of the array followed its values.
- When using mode 0 the callback continues even if the loading dialog is still open.

<thead>
<tr>
<th>save_array_str(&lt;array-variable&gt;,&lt;path&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>saves an array to an external file (i.e. an .nka file), using the specified absolute path</td>
</tr>
<tr>
<td>&lt;array-variable&gt; the array to be saved</td>
</tr>
<tr>
<td>&lt;path&gt; the absolute path of the .nka file to be saved</td>
</tr>
</tbody>
</table>

Remarks

- The behaviour is similar to save_array(), but instead of manually choosing a save location, you can directly save the file to the specified location.
- If the file does not exist (but the folder does), a new .nka file will be created.
- Can be used in persistence_changed, ui and pgs callbacks.

Examples

[see next page]
on init
    declare $count

    declare @path
    {set save path here, for example
     @path := "/Users/<username>/Desktop/Arrays/"}

    declare ui_button $Save

    declare ui_table %table[8] (2,2,100)
    make_persistent(%table)

    declare %preset[8]

    declare $save_arr_id
    $save_arr_id := -1

    declare ui_text_edit @preset_name
    make_persistent(@preset_name)

    set_control_par_str(get_ui_id(@preset_name),$CONTROL_PAR_TEXT,"empty")
    set_control_par(get_ui_id(@preset_name),$CONTROL_PAR_FONT_TYPE,25)
    set_control_par(get_ui_id(@preset_name),$CONTROL_PAR_POS_X,73 + 3*92)
    set_control_par(get_ui_id(@preset_name),$CONTROL_PAR_POS_Y,2)

    declare ui_label $pattern_lbl(1,1)
    set_text($pattern_lbl,"")
    move_control_px($pattern_lbl,66 + 3*92,2)
end on

on ui_control (%table)
    $count := 0
    while($count < 8)
        %preset[$count] := %table[$count]
        inc($count)
    end while
end on

on ui_control ($$Save)
    $save_arr_id := save_array_str(%preset,@path & @preset_name & ".nka")
end on

on async_complete
    if ($NI_ASYNC_ID = $save_arr_id)
        $save_arr_id := -1
        $$Save := 0
    end if
end on

Save table presets with custom names – make sure to set the path where the .nka files will be saved

See Also

save_array()
load_array_str()
**save_midi_file()**

```
save_midi_file(<path>)
```

saves a MIDI file with a range specified by the `mf_set_export_area()` command.

`<path>` the absolute path of the MIDI file

### Example

```ksp
on init
    declare @path
    {set save path here, for example
     @path := "/Users/<username>/Desktop/MIDI Files/"
    }

    declare ui_text_edit @file_name
    set_control_par_str(get_ui_id(@file_name),$CONTROL_PAR_TEXT,"<empty>")
    set_control_par(get_ui_id(@file_name),$CONTROL_PAR_FONT_TYPE,25)
    make_persistent(@file_name)
    move_control_px(@file_name,73,2)

    declare ui_label $file_name_lbl(1,1)
    set_text($file_name_lbl,"")
    move_control_px($file_name_lbl,66,2)

    declare ui_button $Save
    move_control($Save,2,1)

    declare $save_mf_id
    $save_mf_id := -1

end on

on ui_control ($Save)
    $save_mf_id := save_midi_file(@path & @file_name & ".mid")
end on

on async_complete
    if ($NI_ASYNC_ID = $save_mf_id)
        $save_mf_id := -1
        $Save := 0
    end if
end on
```

MIDI Object Commands

General Information

Please note that in KONTAKT version 5.2, the MIDI file handling has been significantly updated. Commands and working methods from before the 5.2 release will remain in order to keep backwards compatibility; however this reference will document the post 5.2 working method.

You can only use one MIDI object at a time within an NKI. The MIDI object is held in memory and can be accessed by any of the script slots. It is possible to add, remove and edit MIDI events within the object, as well as import and export MIDI files.

The Multi Script can also hold one MIDI object, and handles it in the same way as an NKI.

Creating, Importing and Exporting MIDI files

When you initialize an instrument, an empty MIDI object is initialized with it. You can either start editing the object by defining a buffer size and inserting events, or by inserting a whole MIDI file.

If you want to create a MIDI sequence from scratch, you first need to assign a buffer size, which effectively creates a number of inactive MIDI events. From this point you can activate (ie. insert) and edit MIDI events using the MIDI event commands.

You can also load a MIDI file to use or edit the data in a script. Depending on the command and variables you use, this will either be combined with any existing MIDI data, or will replace the existing data. It should be noted that loading a MIDI file is an asynchronous command, and thus the common asynchronous loading commands and working methods apply.

MIDI objects can be exported from KONTAKT either by using the `save_midi_file()` command, or via a drag and drop enabled label element. In either case, it is possible to define the export area, both in terms of start and end times, as well as the start and end tracks, by using the `mf_set_export_area()` command.

Navigation and Editing

MIDI events in KONTAKT’s MIDI object are given event parameters, which are accessed using either the `mf_get_event_par()` or `mf_set_event_par()` commands. A unique event ID can be used to access a specific event, or you can navigate through events by position. The event ID is assigned whenever a MIDI event is created or loaded.

In order to access the event data of a loaded MIDI file, you can navigate around the MIDI events with a position marker, something analogous to a play-head. The position marker will focus on one single event at a time, allowing you to use a variety of commands to access or edit the event’s parameters. You have the option to either navigate from one event to the next, or to specify exact positions in MIDI ticks.

It should be noted that MIDI note off messages are not used. When you load a MIDI file using the `mf_insert_file()` command, the note off events are used to give a length parameter to the respective note on event, and are then discarded.
mf_insert_file()

<table>
<thead>
<tr>
<th>mf_insert_file(&lt;path&gt;,&lt;track-offset&gt;,&lt;position-offset&gt;,&lt;mode&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>inserts a MIDI file into the MIDI object.</td>
</tr>
<tr>
<td>&lt;path&gt; the absolute path of the MIDI file, including the file name</td>
</tr>
<tr>
<td>&lt;track-offset&gt; applies a track offset to the MIDI data</td>
</tr>
<tr>
<td>&lt;position-offset&gt; applies a position offset, in ticks, to the MIDI data</td>
</tr>
<tr>
<td>&lt;mode&gt; defines the mode of insertion:</td>
</tr>
<tr>
<td>0: replace all existing events</td>
</tr>
<tr>
<td>1: replace only overlapping events</td>
</tr>
<tr>
<td>2: merge all events</td>
</tr>
</tbody>
</table>

Remarks

- The loading of MIDI files with this command is asynchronous, so it is advised to use the async_complete callback to check the status of the load. However, the async_complete callback will not be called if this command is used in the init callback.
- This command will pair Note On and Note Off events to a single Note On with a Note Length parameter. The Note Off events will be discarded.

Example

(see next page)
on init
    declare @file_name
    declare @filepath

    @file_name := "test.mid"
    @filepath := get_folder($GET_FOLDER_FACTORY_DIR) & @file_name

    declare $load_mf_id
    declare ui_button $load_file
end on

on ui_control($load_file)
    $load_mf_id := mf_insert_file(@filepath,0,0,0)
end on

on async_complete
    if ($NI_ASYNC_ID = $load_mf_id)
        $load_mf_id := -1
        if ($NI_ASYNC_EXIT_STATUS = 0)
            message("FATAL ERROR: MIDI file not found!")
        else
            message("Loaded MIDI File: " & @file_name)
        end if
    end if
end on

Loading a MIDI file with a button – in order for this to work you’ll have to put a MIDI file called “test.mid” into your KONTAKT Factory folder. Otherwise the defined error message will be displayed.

See Also

$NI_ASYNC_ID
$NI_ASYNC_EXIT_STATUS
on async_complete
save_midi_file()
mf_set_event_par()
mf_get_event_par()
mf_set_export_area()

<table>
<thead>
<tr>
<th>mf_set_export_area(&lt;name&gt;,&lt;start-pos&gt;,&lt;end-pos&gt;,&lt;start-track&gt;,&lt;end-track&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>defines the part of the MIDI object that will be exported when using a drag and drop area, or the save_midi_file() command.</td>
</tr>
<tr>
<td>&lt;name&gt;</td>
</tr>
<tr>
<td>&lt;start-pos&gt;</td>
</tr>
<tr>
<td>&lt;end-pos&gt;</td>
</tr>
<tr>
<td>&lt;start-track&gt;</td>
</tr>
<tr>
<td>&lt;end-track&gt;</td>
</tr>
</tbody>
</table>

Remarks

- If a start point is given a value greater than the end point, the values will be swapped.
- When this command is executed, the events in the range are checked if they are valid MIDI commands. The command will return a value of 0 if all events are valid, otherwise it will return the event ID of the first invalid event.

Example

```plaintext
on init
    @filepath := get_folder($GET_FOLDER_FACTORY_DIR) & "test.mid"
    mf_insert_file(@filepath,0,0,0)
    declare ui_button $check_area
    declare $area_status
end on

on ui_control($check_area)
    $area_status := mf_set_export_area("name",-1,-1,-1,-1)
    if($area_status = 0)
        message("All Good")
    else
        message("Error: check event with ID " & $area_status)
    end if
end on
```

A simple script, using this command to check if all events in a MIDI file are valid. If there is an error it will display the event ID of the first invalid event – in order for this to work you'll have to put a MIDI file called "test.mid" into your KONTAKT Factory folder.
See Also

mf_insert_file()
$CONTROL_PAR_DND_BEHAVIOUR
save_midi_file()
mf_set_buffer_size()

<table>
<thead>
<tr>
<th>mf_set_buffer_size(&lt;size&gt;)</th>
</tr>
</thead>
<tbody>
<tr>
<td>defines a number of inactive MIDI events, that can be activated and edited</td>
</tr>
<tr>
<td>&lt;size&gt;                the size of the MIDI object edit buffer</td>
</tr>
</tbody>
</table>

Remarks

- Using the `mf_insert_event()` and `mf_remove_event()` technically activate or deactivate events in the buffer.
- It is not possible to insert MIDI events without first setting a buffer size
- The maximum buffer size is 1,000,000 events (including both active and inactive events)
- If this command is called outside of the init callback, it is asynchronous, and thus calls the `async_complete` callback.
- Inserting a MIDI event will decrease the buffer size by one. Removing an event will increase it by one.
- Inserting a MIDI file will not affect the buffer.

See Also

- `mf_insert_file()`
- `mf_get_buffer_size()`
- `mf_reset()`
- `mf_insert_event()`
- `mf_remove_event()`
- `save_midi_file()`
**mf_get_buffer_size()**

<table>
<thead>
<tr>
<th>mf_get_buffer_size()</th>
</tr>
</thead>
<tbody>
<tr>
<td>returns the size of the MIDI event buffer</td>
</tr>
</tbody>
</table>

**Remarks**

- The maximum buffer size is 1,000,000 events (including both active and inactive events)
- Inserting a MIDI event will decrease the buffer size by one. Removing an event will increase it by one.

**See Also**

- `mf_insert_file()`
- `mf_set_buffer_size()`
- `mf_reset()`
- `mf_insert_event()`
- `mf_remove_event()`
- `save_midi_file()`
mf_reset()

<table>
<thead>
<tr>
<th>mf_reset()</th>
</tr>
</thead>
<tbody>
<tr>
<td>resets the MIDI object, sets the event buffer to zero, and removes all events</td>
</tr>
</tbody>
</table>

Remarks

- This command purges all MIDI data, use with caution
- This command is also asynchronous, and thus calls the `async_complete` callback

See Also

- mf_insert_file()
- mf_set_buffer_size()
- mf_reset()
- mf_insert_event()
- mf_remove_event()
- save_midi_file()
mf_insert_event()  

**mf_insert_event(track, pos, command, byte1, byte2)**

activates an inactive MIDI event in the MIDI object. However, because the command and position are defined in this command, it can be considered as an insertion.

- **<track>** the track into which the MIDI event will be inserted
- **<pos>** the position at which the event will be inserted, in MIDI ticks
- **<command>** defines the command type of the MIDI event, can be one of the following:
  - $MIDI_COMMAND_NOTE_ON
  - $MIDI_COMMAND_POLY_AT
  - $MIDI_COMMAND_CC
  - $MIDI_COMMAND_PROGRAM_CHANGE
  - $MIDI_COMMAND_MONO_AT
  - $MIDI_COMMAND_PITCH_BEND
- **<byte1>** the first byte of the MIDI command
- **<byte2>** the second byte of the MIDI command

**Remarks**

- It is not possible to insert MIDI events without first setting an event buffer size with the `mf_set_buffer_size()` command
- Using this command when the buffer is full (i.e. has a size of zero) will do nothing
- You can retrieve the event ID of the inserted event in a variable by writing:
  ```
  <variable> :=
  mf_insert_event(track, pos, command, byte1, byte2)
  ```

**See Also**

- `mf_insert_file()`
- `mf_set_buffer_size()`
- `mf_get_buffer_size()`
- `mf_reset()`
- `mf_remove_event()`
- `save_midi_file()`
mf_remove_event()

mf_remove_event(<event-id>)
deactivates an event in the MIDI object, effectively removing it

|<event-id> | the ID of the event to be deactivated |

Remarks

- Using this command will increase the MIDI event buffer size by one

See Also

mf_insert_file()
mf_set_buffer_size()
mf_get_buffer_size()
mf_reset()
mf_insert_event()
save_midi_file()
**mf_set_event_par()**

```
mf_set_event_par(<event-id>,<parameter>,<value>)
```

sets an event parameter

<table>
<thead>
<tr>
<th>&lt;event-id&gt;</th>
<th>the ID of the event to be edited</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>the event parameter, either one of four freely assignable event parameter:</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_0</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_1</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_2</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_3</td>
</tr>
<tr>
<td></td>
<td>or the &quot;built-in&quot; parameters of a MIDI event:</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_MIDI_CHANNEL</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_MIDI_COMMAND</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_MIDI_BYTE_1</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_MIDI_BYTE_2</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_POS</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_NOTE_LENGTH</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_TRACK_NR</td>
</tr>
<tr>
<td>&lt;value&gt;</td>
<td>the value of the event parameter</td>
</tr>
</tbody>
</table>

Remarks

- You can control all events in the MIDI object by using the `$ALL_EVENTS` constant as the event ID.
- You can access the currently selected event by using the `$CURRENT_EVENT` constant.
- You can also control events by track, or group them with markers by using the `by_track()` and `by_mark()` commands.

See Also

- `mf_insert_file()`
- `mf_insert_event()`
- `mf_remove_event()`
- `$ALL_EVENTS`
- `$CURRENT_EVENT`
- `by_marks()`
- `by_track()`
- `mf_set_mark()`
- `mf_get_id()`
- `save_midi_file()`
mf_get_event_par()

mf_get_event_par(<event-id>,<parameter>)

returns the value of an event parameter

<table>
<thead>
<tr>
<th>&lt;event-id&gt;</th>
<th>the ID of the event to be edited</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>the event parameter, either one of four freely assignable event parameter:</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_0</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_1</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_2</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_3</td>
</tr>
<tr>
<td></td>
<td>or the &quot;built-in&quot; parameters of a MIDI event:</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_MIDI_CHANNEL</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_MIDI_COMMAND</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_MIDI_BYTE_1</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_MIDI_BYTE_2</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_POS</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_NOTE_LENGTH</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_ID</td>
</tr>
<tr>
<td></td>
<td>$EVENT_PAR_TRACK_NR</td>
</tr>
</tbody>
</table>

Remarks

- You can access all events in the MIDI object by using the $ALL_EVENTS constant as the event ID.
- You can access the currently selected event by using the $CURRENT_EVENT constant.
- You can also access events by track, or group them with markers by using the by_track() and by_mark() commands.

Built-in Variables and Constants

General

$\text{CURRENT\_SCRIPT\_SLOT}$
the script slot of the current script (zero based, i.e. the first script slot is 0)

$\%\text{GROUPS\_SELECTED}[<\text{group-idx}>]$
an array with each array index pointing to the group with the same index.
If a group is selected for editing the corresponding array cell contains a 1, otherwise 0

$\$\text{NI\_ASYNC\_EXIT\_STATUS}$
returns a value of 1 if the command that triggered the on async_complete callback has successfully completed its action. 0 if the command could not complete its action (e.g. file not found)

$\$\text{NI\_ASYNC\_ID}$
returns the ID of the command that triggered the on async_complete callback.

$\$\text{NI\_BUS\_OFFSET}$
to be used in the <generic> part of the engine parameter commands to point to the instrument bus level. Add the index of the bus you wish to address, for example, $\$\text{NI\_BUS\_OFFSET} + 2$ will point to instrument bus 3.

$\$\text{NUM\_GROUPS}$
total amount of groups in an instrument
this is not a constant and thus cannot be used to define the size of an array

$\$\text{NUM\_OUTPUT\_CHANNELS}$
total amount of output channels of the respective KONTAKT Multi (not counting Aux channels)

$\$\text{NUM\_ZONES}$
total amount of zones in an instrument

$\$\text{PLAYED\_VOICES\_INST}$
the amount of played voices of the respective instrument

$\$\text{PLAYED\_VOICES\_TOTAL}$
the amount of played voices all instruments

Path Variables

$\$\text{GET\_FOLDER\_LIBRARY\_DIR}$
if used with an nki belonging to an encoded library: library folder
if used with an unencoded nki: the user content directory

$\$\text{GET\_FOLDER\_FACTORY\_DIR}$
the factory folder of KONTAKT (mainly used for loading factory IR samples)
Note: this is not the factory library folder!
$GET_FOLDER_PATCH_DIR
the directory in which the patch was saved.
If the patch was not saved before, an empty string is returned.

Time Machine Pro Variables
used access the two voice limits (Standard and High Quality) of the time machine pro, to be used with
set_voice_limit() and get_voice_limit():

$NI_VL_TMPRO_STANDARD
$NI_VL_TMPRO_HQ

$REF_GROUP_IDX
group index number of the currently viewed group

Events and MIDI

$ALL_GROUPS
addresses all groups in a disallow_group() and allow_group() function

$ALL_EVENTS
addresses all events in functions which deal with an event ID number
this constant also works with MIDI event commands that require a MIDI event ID

Bit Mark Constants
bit mark of an event group, to be used with by_marks()

$MARK_1
$MARK_2
...
$MARK_28

%CC[<controller-number>]
current controller value for the specified controller.

$CC_NUM
controller number of the controller which triggered the callback

%CC_TOUCHED[<controller-number>]
1 if the specified controller value has changed, 0 otherwise

$EVENT_ID
unique ID number of the event which triggered the callback

$CURRENT_EVENT
the currently selected MIDI event (i.e. the MIDI event at the position marker)

$EVENT_NOTE
note number of the event which triggered the callback
$EVENT_VELOCITY

velocity of the note which triggered the callback

**Event Parameter Constants**

event parameters to be used with `set_event_par()` and `get_event_par()`

$EVENT_PAR_0
$EVENT_PAR_1
$EVENT_PAR_2
$EVENT_PAR_3
$EVENT_PAR_VOLUME
$EVENT_PAR_PAN
$EVENT_PAR_TUNE
$EVENT_PAR_NOTE
$EVENT_PAR_VELOCITY

To be used with `set_event_par_arr()` and `get_event_par_arr()`:

$EVENT_PAR_ALLOW_GROUP

To be used with `get_event_par()`:

$EVENT_PAR_SOURCE (-1 if event originates from outside, otherwise slot number 0 - 4)
$EVENT_PAR_PLAY_POS (returns the value of the play cursor within a zone)
$EVENT_PAR_ZONE_ID (returns the zone id of the event – can only be used with active events; returns -1 if no zone is triggered; returns the highest zone id if more than one zone is triggered by the event, make sure the voice is running by writing e.g. `wait(1)` before retrieving the zone ID)

**MIDI Event Parameter Constants**

event parameters to be used with `mf_set_event_par()` and `mf_get_event_par()`

$EVENT_PAR_0
$EVENT_PAR_1
$EVENT_PAR_2
$EVENT_PAR_3
$EVENT_PAR_MIDI_CHANNEL
$EVENT_PAR_MIDI_COMMAND
$EVENT_PAR_MIDI_BYTE_1
$EVENT_PAR_MIDI_BYTE_2
$EVENT_PAR_POS
$EVENT_PAR_NOTE_LENGTH
$EVENT_PAR_ID
$EVENT_PAR_TRACK_NR

**Event Status Constants**

$EVENT_STATUS_INACTIVE
$EVENT_STATUS_NOTE_QUEUE
$EVENT_STATUS_MIDI_QUEUE

%GROUPS_AFFECTED

an array with the group indices of those groups that are affected by the current Note On or Note Off events.

the size of the array changes depending on the number of groups the event affects, so use the `num_elements()` command to get the correct array size

the returned indices come before any allow or disallow group commands, and so it can be used to analyze the mapping of the instrument

$NOTE_HELD

1 if the key which triggered the callback is still held, 0 otherwise
%POLY_AT[<note-number>]
the polyphonic aftertouch value of the specified note number

$POLY_AT_NUM
the note number of the polyphonic aftertouch note which triggered the callback

$RPN_ADDRESS
the parameter number of a received rpn/nrpn message (0 – 16383)

$RPN_VALUE
the value of a received rpn or nrpn message (0 – 16383)

$VCC_MONO_AT
the value of the virtual cc controller for mono aftertouch (channel pressure)

$VCC_PITCH_BEND
the value of the virtual cc controller for pitch bend

%KEY_DOWN[<note-number>]
array which contains the current state of all keys. 1 if the key is held, 0 otherwise

%KEY_DOWN_OCT[<note-number>]
1 if a note independently of the octave is held, 0 otherwise
because of this, the note number should be a value between 0 (C) and 11 (B)

**Transport and Timing**

$DISTANCE_BAR_START
returns the time of a note on message in µsec from the beginning of the current bar with respect to the current tempo

$DURATION_BAR
returns the duration in µsec of one bar with respect to the current tempo.

This variable only works if the clock is running, otherwise it will return a value of zero.
You can also retrieve the duration of one bar by using $SIGNATURE_NUM and $SIGNATURE_DENOM in combination with $DURATION_QUARTER.

$DURATION_QUARTER
duration of a quarter note in microseconds, with respect to the current tempo.

Also available:
$DURATION_EIGHTH
$DURATION_SIXTEENTH
$DURATION_QUARTER_TRIPLET
$DURATION_EIGHTH_TRIPLET
$DURATION_SIXTEENTH_TRIPLET

$ENGINE_UPTIME
returns the time period in milliseconds (not microseconds) that has passed since the start of
KONTAKT. The engine uptime is calculated from the sample rate and can thus be used in ‘musical’ contexts (eg. building arpeggiators or sequencers) as it remains in sync, even in an offline bounce.

\texttt{\$KSP\_TIMER}

Returns the time period in microseconds that has passed since the start of KONTAKT. Can be reset with \texttt{reset\_ksp\_timer}.

The KSP timer is based on the CPU clock and thus runs at a constant rate, regardless of whether or not KONTAKT is being used in real-time. As such, it should be used to test the efficiency of script and not to make musical calculations – for musical calculations use the \texttt{\$ENGINE\_UPTIME} timer.

\texttt{\$NI\_SONG\_POSITION}

Returns the host’s current song position in 960 ticks per quarter note.

\texttt{\$NI\_TRANSPORT\_RUNNING}

1 if the host's transport is running, 0 otherwise.

\texttt{\$SIGNATURE\_NUM}

numerator of the current time signature, i.e. 4/4.

\texttt{\$SIGNATURE\_DENOM}

denominator of the current time signature, i.e. 4/4.

**Tempo Unit Variables**

used to control the unit parameter of time-related controls (e.g. Delay Time, Attack etc.) with engine parameter variables like \texttt{\$ENGINE\_PAR\_DL\_TIME\_UNIT}

\texttt{\$NI\_SYNC\_UNIT\_ABS}
\texttt{\$NI\_SYNC\_UNIT\_WHOLE}
\texttt{\$NI\_SYNC\_UNIT\_WHOLE\_TRIPLET}
\texttt{\$NI\_SYNC\_UNIT\_HALF}
\texttt{\$NI\_SYNC\_UNIT\_HALF\_TRIPLET}
\texttt{\$NI\_SYNC\_UNIT\_QUARTER}
\texttt{\$NI\_SYNC\_UNIT\_QUARTER\_TRIPLET}
\texttt{\$NI\_SYNC\_UNIT\_8TH}
\texttt{\$NI\_SYNC\_UNIT\_8TH\_TRIPLET}
\texttt{\$NI\_SYNC\_UNIT\_16TH}
\texttt{\$NI\_SYNC\_UNIT\_16TH\_TRIPLET}
\texttt{\$NI\_SYNC\_UNIT\_32ND}
\texttt{\$NI\_SYNC\_UNIT\_32ND\_TRIPLET}
\texttt{\$NI\_SYNC\_UNIT\_64TH}
\texttt{\$NI\_SYNC\_UNIT\_64TH\_TRIPLET}
\texttt{\$NI\_SYNC\_UNIT\_256TH}
\texttt{\$NI\_SYNC\_UNIT\_ZONE} {Only applies to the Source Module Speed parameter}

\texttt{\%NOTE\_DURATION[<note-number>]}

note length since note-start in microseconds for each key
Callbacks and UI

Callback Type Variables and Constants

$NI_CALLBACK_ID
returns the ID number of the callback. Every callback has a unique ID number which remains the same within a function.

$NI_CALLBACK_TYPE
returns the callback type. Useful for retrieving the callback that triggered a specific function.

The following constants are available:

$NI_CB_TYPE_ASYNC_OUT
$NI_CB_TYPE_CONTROLLER
$NI_CB_TYPE_INIT
$NI_CB_TYPE_LISTENER
$NI_CB_TYPE_NOTE
$NI_CB_TYPE_PERSISTENCE_CHANGED
$NI_CB_TYPE_PGS
$NI_CB_TYPE_POLY_AT
$NI_CB_TYPE_RELEASE
$NI_CB_TYPE_RPN/$NI_CB_TYPE_NRPN
$NI_CB_TYPE_UI_CONTROL
$NI_CB_TYPE_UI_UPDATE
$NI_CB_TYPE_MIDI_IN

Listener Constants
can be used with set_listener() or change_listener_par() to set which signals will trigger the on listener callback. Can also be used with $NI_SIGNAL_TYPE to determine which signal type triggered the callback.

$NI_SIGNAL_TRANSP_STOP
$NI_SIGNAL_TRANSP_START
$NI_SIGNAL_TIMER_MS
$NI_SIGNAL_TIMER_BEAT

Knob Unit Mark Constants
to be used with set_knob_unit()

$KNOB_UNIT_NONE
$KNOB_UNIT_DB
$KNOB_UNIT_HZ
$KNOB_UNIT_PERCENT
$KNOB_UNIT_MS
$KNOB_UNIT_ST
$KNOB_UNIT_OCT

$NI_SIGNAL_TYPE
can be used in the on listener callback to determine which signal type triggered the callback.

Mathemetical Constants

~NI_MATH_PI
returns the mathematical constant \( \pi \) (approx. 3.14159…)

~NI_MATH_E
returns the mathematical constant \( e \) (approx. 2.71828…)
Control Parameter Variables

General

$CONTROL_PAR_NONE
nothing will be applied to the control

$CONTROL_PAR_HELP
sets the help text which is displayed in the info pane when hovering the control

Size, Position, and Look

$CONTROL_PAR_POS_X
sets the horizontal position in pixels

$CONTROL_PAR_POS_Y
sets the vertical position in pixels

$CONTROL_PAR_GRID_X
sets the horizontal position in grid units

$CONTROL_PAR_GRID_Y
sets the vertical position in grid units

$CONTROL_PAR_WIDTH
sets the width of the control in pixels

$CONTROL_PAR_HEIGHT
sets the height of the control in pixels

$CONTROL_PAR_GRID_WIDTH
sets the width of the control in grid units

$CONTROL_PAR_GRID_HEIGHT
sets the height of the control in grid units

$CONTROL_PAR_HIDE
sets the hide status. Can be used with the following built in constants:

$HIDE_PART_BG {Background of knobs, labels, value edits and tables}
$HIDE_PART_VALUE {value of knobs}
$HIDE_PART_TITLE {title of knobs}
$HIDE_PART_MOD_LIGHT {mod ring light of knobs}
$HIDE_PART_NOTHING {Show all}
$HIDE_WHOLE_CONTROL
$\texttt{CONTROL\_PAR\_PICTURE}$

Sets the picture name. An extension is not required for the picture name, neither is the full path. If the nki references a resource container, KONTAKT will look for the file in the pictures subfolder. If the nki does not reference a resource container, it will first look in the user pictures folder (located in user/documents/Native Instruments/Kontakt 5/pictures), then in the KONTAKT pictures folder.

$\texttt{CONTROL\_PAR\_PICTURE\_STATE}$

Sets the picture state of the control for tables, value edits and labels.

$\texttt{CONTROL\_PAR\_Z\_LAYER}$

Sets the Z layer position of the control. Controls can be placed in one of three layers, within these layers they are then positioned by type, and then by declaration order.

0: Default layer. All controls are assigned to this layer by default.
-1: Back layer. Controls in this layer are placed below the default layer.
1: Front layer. Controls in this layer are placed on top of the default and back layers.

**Values**

$\texttt{CONTROL\_PAR\_VALUE}$

Sets/returns the value.

$\texttt{CONTROL\_PAR\_DEFAULT\_VALUE}$

Sets the default value.

**Text**

$\texttt{CONTROL\_PAR\_TEXT}$

Sets the control text, similar to `set_text()`.

$\texttt{CONTROL\_PAR\_TEXTLINE}$

Adds a text line, similar to `add_text_line()`.

$\texttt{CONTROL\_PAR\_LABEL}$

Sets the knob label, similar to `set_knob_label()`.
This is also the value/string published to the host when using automation.
Also works for switches.

$\texttt{CONTROL\_PAR\_UNIT}$

Sets the knob unit, similar to `set_knob_unit()`.

$\texttt{CONTROL\_PAR\_FONT\_TYPE}$

Sets the font type.
Only KONTAKT 5 factory fonts can be used, the font itself is designated by a number (0 to 24).

$\texttt{CONTROL\_PAR\_TEXTPOS\_Y}$

Shifts the vertical position in pixels of text in buttons, menus, switches and labels.

$\texttt{CONTROL\_PAR\_TEXT\_ALIGNMENT}$

Sets the text alignment in buttons, menus, switches and labels:
0: left
Automation

$CONTROL_PAR_AUTOMATION_NAME

assigns an automation name to a UI control when used with `set_control_par_str()`

$CONTROL_PAR_LABEL can be used to set the automation value string

When assigning automation names to XY pad cursors, use the `set_control_par_str_arr()` command with this parameter.

$CONTROL_PAR_ALLOW_AUTOMATION

defines if an `ui_control` can be automated (1) or not (0). By default automation is enabled for all automatable controls. Can only be used in the `init` callback.

$CONTROL_PAR_AUTOMATION_ID

assigns an automation ID to a UI control (range 0 to 511). Can only be used in the `init` callback.

Automation IDs can only be assigned to automatable controls (sliders, switches, and knobs)

When assigning automation IDs to XY pad cursors, use the `set_control_par_arr()` command with this parameter.

Key Modifiers

$CONTROL_PAR_KEY_SHIFT

returns 1 when the shift key was pressed (0 otherwise) while clicking the UI control. 

Menus and value edits are not supported.

The basic shift modifier functionality on sliders and knobs is preserved.

$CONTROL_PAR_KEY_ALT

returns 1 if the ALT key (PC) or OPT key (Mac) was pressed (0 otherwise) while clicking the UI control. 

Menus and value edits are not supported.

$CONTROL_PAR_KEY_CONTROL

returns 1 if the CTRL key (PC) or Cmd key (Mac) was pressed (0 otherwise) while clicking the UI control.

Menus and value edits are not supported.
Specific

Tables

$NI\_CONTROL\_PAR\_IDX
returns the index of the table column that triggered the on ui_control() callback

Tables and Waveform

$CONTROL\_PAR\_BAR\_COLOR
sets the color of the step bar in UI tables and UI waveforms
colors are set using a hex value in the following format:
9ff0000h {red}
the 9 at the start is just to let KONTAKT know the value is a number, the h at the end is to indicate
that it is a hexadecimal value.

$CONTROL\_PAR\_ZERO\_LINE\_COLOR
sets the color of the middle line in UI tables

Menus

$CONTROL\_PAR\_NUM\_ITEMS
returns the number of menu entries of a specific dropdown menu.
Only works with get_control_par().

$CONTROL\_PAR\_SELECTED\_ITEM\_IDX
returns the index of the currently selected menu entry.
Only works with get_control_par().

Labels

$CONTROL\_PAR\_DND\_BEHAVIOUR
Using a value of 1 with this variable sets the label as a “Drag and Drop” area, allowing the user to
export the MIDI object currently held in the script memory by a simple drag and drop action. See the
section on MIDI Object Commands for more information on MIDI handling in KSP.

Value Edit

$CONTROL\_PAR\_SHOW\_ARROWS
hides the arrows of value edits:
0; arrows are hidden
1; arrows are shown

Level Meters

$CONTROL\_PAR\_BG\_COLOR
sets the background color of the UI level meter
colors are set using a hex value in the following format:
9ff0000h {red}
the 9 at the start is just to let KONTAKT know the value is a number, the h at the end is to indicate
that it is a hexadecimal value.

$\text{CONTROL\_PAR\_OFF\_COLOR}$
sets the second background color of the UI level meter

$\text{CONTROL\_PAR\_ON\_COLOR}$
sets the main level meter color of the UI level meter

$\text{CONTROL\_PAR\_OVERLOAD\_COLOR}$
sets the color of the level meter’s overload section

$\text{CONTROL\_PAR\_PEAK\_COLOR}$
sets the color of the little bar showing the current peak level

$\text{CONTROL\_PAR\_VERTICAL}$
aligns a UI level meter vertically (1) or horizontally (0, default)

File Browser

$\text{CONTROL\_PAR\_BASEPATH}$
sets the basepath of the UI file browser. This control par can only be used in the init callback. Be careful with the number of subfolders of the basepath as it might take too long to scan the sub file system. The scan process takes place every time the NKI is loaded.

$\text{CONTROL\_PAR\_COLUMN\_WIDTH}$
sets the width of the browser columns. This control par can only be used in the init callback.

$\text{CONTROL\_PAR\_FILEPATH}$
sets the actual path of the UI file browser which must be a subpath of the basepath. This control par is useful for recalling the last status of the browser upon loading the instrument. Can only be used in the init callback.

$\text{CONTROL\_PAR\_FILE\_TYPE}$
sets the file type for file selector. Can only be used in the init callback.
The following file types are available:

$\text{NI\_FILE\_TYPE\_MIDI}$
$\text{NI\_FILE\_TYPE\_AUDIO}$
$\text{NI\_FILE\_TYPE\_ARRAY}$

Instrument Icon and Wallpaper

$\text{INST\_ICON\_ID}$
the (fixed) ID of the instrument icon.

It's possible to hide the instrument icon:
set_control_par($\text{INST\_ICON\_ID},$\text{CONTROL\_PAR\_HIDE},$\text{HIDE\_WHOLE\_CONTROL})

It's also possible to load a different picture file for the instrument icon:
set_control_par_str($\text{INST\_ICON\_ID},$\text{CONTROL\_PAR\_PICTURE},<$file-name>)}
The (fixed) ID of the instrument wallpaper. It is used in a similar way as $INST_ICON_ID:

```
set_control_par_str ($INST_WALLPAPER_ID,$CONTROL_PAR_PICTURE,<file_name>)
```

This command can only be used in the init callback. Note that a wallpaper set via script replaces the
one set in the instrument options and it will not be checked in the samples missing dialog when
loading the wallpaper from a resource container.
this command only supports wallpapers that are located within the resource container.
If you use it in different script slots then the last wallpaper set will be the one that is loaded.

### Waveform

#### Waveform Flag Constants

to be used with `attach_zone()`
you can combine flat constants using the bitwise `or`.

<table>
<thead>
<tr>
<th>Constant</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>$UI_WAVEFORM_USE_SLICES</td>
<td>display the zone's slice markers</td>
</tr>
<tr>
<td>$UI_WAVEFORM_USE_TABLE</td>
<td>display a per slice table</td>
</tr>
<tr>
<td></td>
<td>note: this only works if the slice markers are also active</td>
</tr>
<tr>
<td>$UI_WAVEFORM_TABLE_IS_BIPOLAR</td>
<td>make the table bipolar</td>
</tr>
<tr>
<td>$UI_WAVEFORM_USE_MIDI_DRAG</td>
<td>display a MIDI drag and drop icon</td>
</tr>
<tr>
<td></td>
<td>note: this only works if the slice markers are also active</td>
</tr>
</tbody>
</table>

#### Waveform Property Constants

to be used with `get/set_ui_wf_property()`

<table>
<thead>
<tr>
<th>Constant</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>$UI_WF_PROP_PLAY_CURSOR</td>
<td>sets or returns the play head position</td>
</tr>
<tr>
<td>$UI_WF_PROP_FLAGS</td>
<td>used to set new flag constants after the <code>attach_zone()</code> command is used</td>
</tr>
<tr>
<td>$UI_WF_PROP_TABLE_VAL</td>
<td>sets or returns the value of the indexed slice's table</td>
</tr>
<tr>
<td>$UI_WF_PROP_TABLE_IDX_HIGHLIGHT</td>
<td>highlights the indexed slice within the UI waveform</td>
</tr>
<tr>
<td>$UI_WF_PROP_MIDI_DRAG_START_NOTE</td>
<td>defines the start note for the midi drag &amp; drop function</td>
</tr>
</tbody>
</table>

### $CONTROL_PAR_BG_COLOR

sets the background color of the waveform display

colors are set using a hex value in the following format:

```
9ff0000h {red}
```

the 9 at the start is just to let KONTAKT know the value is a number, the h at the end is to indicate
that it is a hexadecimal value.

### $CONTROL_PAR_WAVE_COLOR

sets the color of the waveform

### $CONTROL_PAR_WAVE_CURSOR_COLOR

sets the color of the playback cursor

### $CONTROL_PAR_SLICEMARKERS_COLOR

sets the color of the slice markers

### $CONTROL_PAR_BG_ALPHA
sets the alpha channel (opacity) of the background of the widget.
Range: 0 (fully transparent) to 255 (fully opaque)

### Slider

$\text{CONTROL\_PAR\_MOUSE\_BEHAVIOUR}$

a value from -5000 to 5000, setting the move direction of a slider and its drag-scale settings are relative to the size of the slider picture
negative values give a vertical slider behavior, positive values give a horizontal behavior

### XY Pad

$\text{CONTROL\_PAR\_MOUSE\_BEHAVIOUR\_X}$

Mouse behavior (i.e. the drag scale) of the x axis of all cursors

$\text{CONTROL\_PAR\_MOUSE\_BEHAVIOUR\_Y}$

Mouse behavior (i.e. the drag scale) of the y axis of all cursors

$\text{CONTROL\_PAR\_MOUSE\_MODE}$

Sets the way the XY pad responds to mouse clicks and drags.

0: Clicks anywhere other than on a cursor are ignored. Clicking on a cursor and dragging, sets new values respecting the usual $\text{CONTROL\_PAR\_MOUSE\_BEHAVIOUR}$ settings.

1: Clicks anywhere on the XY pad are registered but don't change the values. Clicking anywhere and dragging, sets new values; the cursor moves parallel to the mouse cursor with distances scaled based on the $\text{CONTROL\_PAR\_MOUSE\_BEHAVIOUR}$ settings.

2: Clicks anywhere on the XY pad are registered and immediately change the values, with the cursor immediately matching the mouse cursor. Clicking anywhere and dragging has a similar effect; the $\text{CONTROL\_PAR\_MOUSE\_BEHAVIOUR}$ settings are ignored; cursor always follows mouse cursor one-to-one.

$\text{CONTROL\_PAR\_ACTIVE\_INDEX}$

sets and gets the index of the active cursor. Only relevant in multi-cursor set-ups. The $\text{CONTROL\_PAR\_MOUSE\_MODE}$ setting will influence how this parameter behaves:

Mouse Mode = 0 and 1: the active cursor can only be changed manually, by setting this control parameter. Inactive cursors don't receive any clicks.

Mouse Mode = 2: it is set automatically based on the last clicked cursor. Setting it manually from within the ui_control callback of the XY pad can result in unexpected results, but using it in other callbacks is fully encouraged and makes sense in many scenarios. The value is -1 when not clicking on any cursor.

The index can only be an even number (with the exception of the -1 value) that matches the index of the X axis of the cursor in the main array representing the XY control, e.g., the first cursor has an index of 0, the second one has an index of 2, etc

$\text{CONTROL\_PAR\_CURSOR\_PICTURE}$

sets the cursor image. Each cursor can have its own image set using the set_control_par_str_arr() command.

Using $\text{CONTROL\_PAR\_PICTURE}$ with the XY pad will set the background image of the control.

The cursor images can have up to 6 frames, corresponding to the following states (frame selection is automatic as with buttons/switches)
1: Inactive
2: Active
3: Inactive pressed
4: Active pressed
5: Inactive mouse over
6: Active mouse over

$HIDE\_PART\_CURSOR$

when used with `set_control_par_arr()`, this can be used to hide specific cursors in the XY pad.
Below is a simple syntax example:

```plaintext
if($hide = 1)
    set_control_par_arr($id, $CONTROL\_PAR\_HIDE, $HIDE\_PART\_CURSOR, $index)
else
    set_control_par_arr($id, $CONTROL\_PAR\_HIDE, $HIDE\_PART\_NOTHING, $index)
end if
```

The index should be an even number that matches the index of the X axis of the cursor in the main array representing the XY control, so the first cursor has an index of 0, the second has an index of 2, and so on.

$NI\_CONTROL\_PAR\_IDX$

returns the index of the cursor that triggered the `on ui_control()` callback for the XY pad

Note that indices are always even numbers starting from 0, so the first cursor has an index of 0, the second has an index of 2, and so on.
**Engine Parameter Variables**

**Instrument, Source and Amp Module**

<table>
<thead>
<tr>
<th>Parameter Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>$ENGINE_PAR_VOLUME</td>
<td>instrument/group/bus volume</td>
</tr>
<tr>
<td>$ENGINE_PAR_PAN</td>
<td>instrument/group/bus panorama</td>
</tr>
<tr>
<td>$ENGINE_PAR_TUNE</td>
<td>instrument/group/bus tuning</td>
</tr>
</tbody>
</table>

**Source Module**

<table>
<thead>
<tr>
<th>Parameter Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>$ENGINE_PAR_SMOOTH</td>
<td></td>

<td></td>
</tr>
<tr>
<td>$ENGINE_PAR_FORMANT_SHIFT</td>
<td></td>
</tr>
<tr>
<td>$ENGINE_PAR_SPEED_UNIT</td>
<td></td>
</tr>
</tbody>
</table>

**$ENGINE\_PAR\_OUTPUT\_CHANNEL**

designates the output for the group or bus

- 0 routes to one of KONTAKT’s outputs (this bypasses the instrument insert effects)
- 1 routes to the instrument output (default)
- 2 routes to the instrument output with the instrument insert effects bypassed

$NI\_BUS\_OFFSET + [0 – 15] routes to one of the busses (busses cannot be routed to other busses)
## Insert Effects

<table>
<thead>
<tr>
<th>Parameter</th>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SET_CONDITION(&lt;condition-symbol&gt;)</td>
<td>define a symbol to be used as a condition</td>
</tr>
<tr>
<td>RESET_CONDITION(&lt;condition-symbol&gt;)</td>
<td>delete a definition</td>
</tr>
<tr>
<td>USE_CODE_IF(&lt;condition-symbol&gt;)</td>
<td>interpret code when &lt;condition&gt; is defined</td>
</tr>
<tr>
<td>END_USE_CODE</td>
<td></td>
</tr>
<tr>
<td>USE_CODE_IF_NOT(&lt;condition-symbol&gt;)</td>
<td>interpret code when &lt;condition&gt; is not defined</td>
</tr>
<tr>
<td>END_USE_CODE</td>
<td></td>
</tr>
<tr>
<td>NO_SYS_SCRIPT_GROUP_STAR</td>
<td>condition; if defined with SET_CONDITION(), the system script which handles all group start options will be bypassed</td>
</tr>
<tr>
<td>NO_SYS_SCRIPT_PEDAL</td>
<td>condition; if defined with SET_CONDITION(), the system script which sustains notes when CC# 64 is received will be bypassed</td>
</tr>
<tr>
<td>NO_SYS_SCRIPT_RLS_TRIG</td>
<td>condition; if defined with SET_CONDITION(), the system script which triggers samples upon the release of a key is bypassed</td>
</tr>
<tr>
<td>reset_rls_trig_counter(&lt;note&gt;)</td>
<td>resets the release trigger counter (used by the release trigger system script)</td>
</tr>
<tr>
<td>will_never_terminate(&lt;event-id&gt;)</td>
<td>tells the script engine that this event will never be finished (used by the release trigger system script)</td>
</tr>
</tbody>
</table>
Examples

A preprocessor is used to exclude code elements from interpretation. Here’s how it works:

```plaintext
USE_CODE_IF(<condition>)
...
END_USE_CODE
```
or

```plaintext
USE_CODE_IF_NOT(<condition>)
...
END_USE_CODE
```

`<condition>` refers to a symbolic name which consists of alphanumeric symbols, preceded by a letter. You could write for example:

```plaintext
on note
  {do something general}
$var := 5
{do some conditional code}
USE_CODE_IF_NOT(dont_do_sequencer)
  while ($count > 0)
    play_note()
  end while
END_USE_CODE
end on
```

What’s happening here?
Only if the symbol `dont_do_sequencer` is not defined, the code between `USE_` and `END_USE_` will be processed. If the symbol were to be found, the code would not be passed on to the parser; it is as if the code was never written (therefore it does not utilize any CPU power).

You can define symbols with

```plaintext
SET_CONDITION(<condition symbol>)
```
and delete the definition with

```plaintext
RESET_CONDITION(<condition symbol>)
```

All commands will be interpreted before the script is running, i.e. by using `USE_CODE_` the code might get stalled before it is passed to the script engine. That means, `SET_CONDITION` and `RESET_CONDITION` are actually not true commands: they cannot be utilized in `if()...end if` statements; also a `wait()` statement before those commands is useless. Each `SET_CONDITION` and `RESET_CONDITION` will be executed before something else happens.

All defined symbols are passed on to following scripts, i.e. if script 3 contains conditional code, you can turn it on or off in script 1 or 2.

You can use conditional code to bypass system scripts. There are two built-in symbols:

```plaintext
NO_SYS_SCRIPT_PEDAL
NO_SYS_SCRIPT_RLS_TRIG
```
If you define one of those symbols with `SET_CONDITION()`, the corresponding part of the system scripts will be bypassed. For clarity reasons, those definitions should always take place in the `init` callback.

```ksp
on init
  {we want to do our own release triggering}
  SET_CONDITION(NO_SYS_SCRIPT_RLS_TRIG)
end on

on release
  {do something custom here}
end on
```
It is possible to send and receive values from one script to another, discarding the usual left-to-right order by using the Program Global Storage (PGS) commands. PGS is a dynamic memory that can be read/written by any script. Here are the commands:

**PGS commands**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>pgs_create_key(&lt;key-id&gt;,&lt;size&gt;)</code></td>
<td>Creates a key with <code>&lt;size&gt;</code> elements.</td>
</tr>
<tr>
<td><code>pgs_key_exists(&lt;key-id&gt;)</code></td>
<td>Checks if a key with <code>&lt;key-id&gt;</code> exists.</td>
</tr>
<tr>
<td><code>pgs_set_key_val(&lt;key-id&gt;,&lt;index&gt;,&lt;value&gt;)</code></td>
<td>Sets the value at <code>&lt;index&gt;</code> in key <code>&lt;key-id&gt;</code> to <code>&lt;value&gt;</code>.</td>
</tr>
<tr>
<td><code>pgs_get_key_val(&lt;key-id&gt;,&lt;index&gt;)</code></td>
<td>Gets the value at <code>&lt;index&gt;</code> in key <code>&lt;key-id&gt;</code>.</td>
</tr>
</tbody>
</table>

`<key-id>` is something similar to a variable name, it can only contain letters and numbers and must not start with a number. It might be a good idea to always write them in capitals to emphasize their unique status.

Here's an example, insert this script into any slot:

```plaintext
on init
    pgs_create_key(FIRST_KEY, 1)  # defines a key with 1 element
    pgs_create_key(NEXT_KEY, 128) # defines a key with 128 elements
    declare ui_button $Just_Do_It
end on

on ui_control($Just_Do_It)
    # writes 70 into the first and only memory location of FIRST_KEY
    pgs_set_key_val(FIRST_KEY, 0, 70)

    # writes 50 into the first and 60 into the last memory location of NEXT_KEY
    pgs_set_key_val(NEXT_KEY, 0, 50)
    pgs_set_key_val(NEXT_KEY, 127, 60)
end on
```

and insert the following script into any other slot:

```plaintext
on init
    declare ui_knob $First (0,100,1)
    declare ui_table %Next[128] (5,2,100)
end on

on pgs_changed
    # checks if FIRST_KEY and NEXT_KEY have been declared
    if(pgs_key_exists(FIRST_KEY) and _pgs_key_exists(NEXT_KEY))
        $First := pgs_get_key_val(FIRST_KEY, 0)  # in this case 70
        %Next[0] := pgs_get_key_val(NEXT_KEY, 0)  # in this case 50
        %Next[127] := pgs_get_key_val(NEXT_KEY, 127)  # in this case 60
    end if
end on
```

As illustrated above, there is also a callback that is executed whenever a set_key command has been executed:
callback type, executed whenever any `pgs_set_key_val()` is executed in any script

It is possible to have as many keys as you want, however each key can only have up to 256 elements.

The basic handling for PGS strings is the same as for normal PGS keys; there's only one difference: PGS strings keys aren't arrays like the standard PGS keys you already know – they resemble normal string variables.

### PGS strings commands

- `pgs_create_str_key(<key-id>)`
- `pgs_str_key_exists(<key-id>)`
- `pgs_set_str_key_val(<key-id>,<stringvalue>)`

<`stringvalue>` := `pgs_get_str_key_val(<key-id>)`

<`key-id>` is something similar to a variable name, it can only contain letters and numbers and must not start with a number. It might be a good idea to always write them in capitals to emphasize their unique status.
Zone and Slice Functions

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>find_zone(&lt;zone-name&gt;)</code></td>
<td>returns the zone ID for the specified zone name. Only available in the init callback.</td>
</tr>
<tr>
<td><code>get_sample_length(&lt;zone-ID&gt;)</code></td>
<td>returns the length of the specified zone's sample in microseconds</td>
</tr>
<tr>
<td><code>num_slices_zone(&lt;zone-ID&gt;)</code></td>
<td>returns the number of slices of the specified zone</td>
</tr>
<tr>
<td><code>zone_slice_length(&lt;zone-ID&gt;,&lt;slice-index&gt;)</code></td>
<td>returns the length in microseconds of the specified slice with respect to the current tempo</td>
</tr>
<tr>
<td><code>zone_slice_start(&lt;zone-ID&gt;,&lt;slice-index&gt;)</code></td>
<td>returns the absolute start point of the specified slice in microseconds, independent of the current tempo</td>
</tr>
<tr>
<td><code>zone_slice_idx_loop_start(&lt;zone-ID&gt;,&lt;loop-index&gt;)</code></td>
<td>returns the index number of the slice at the loop start</td>
</tr>
<tr>
<td><code>zone_slice_idx_loop_end(&lt;zone-ID&gt;,&lt;loop-index&gt;)</code></td>
<td>returns the index number of the slice at the loop end</td>
</tr>
<tr>
<td><code>zone_slice_loop_count(&lt;zone-ID&gt;,&lt;loop-index&gt;)</code></td>
<td>returns the loop count of the specified loop</td>
</tr>
<tr>
<td><code>dont_use_machine_mode(&lt;ID-number&gt;)</code></td>
<td>play the specified event in sampler mode</td>
</tr>
</tbody>
</table>
User defined Functions

function <function-name>
  ...
end function

declares a function

call <function-name>

calls a previously declares function

Remarks

The function has to be declared before it is called.

Examples

on init
  declare $root_note := 60
  declare ui_button $button_1
  set_text ($button_1,"Play C Major")
  declare ui_button $button_2
  set_text ($button_2,"Play Gb Major")
  declare ui_button $button_3
  set_text ($button_3,"Play C7 (b9,#11)")
end on
function func_play_triad
  play_note($root_note,100,0,300000)
  play_note($root_note + 4,100,0,300000)
  play_note($root_note + 7,100,0,300000)
end function
on ui_control ($button_1)
  $root_note := 60
  call func_play_triad
  $button_1 := 0
end on
on ui_control ($button_2)
  $root_note := 66
  call func_play_triad
  $button_2 := 0
end on
on ui_control ($button_3)
  $root_note := 60
  call func_play_triad
  $root_note := 66
  call func_play_triad
  $button_3 := 0
end on

Jazz Harmony 101
Resource Container

Introduction

The Resource Container is a useful tool for library developers. It is a dedicated location to store scripts, graphics, .nka files and impulse response files that can be referenced by any NKI or group of NKIs that are linked to the container. Another benefit is that you can create a resource container monolith file containing all the scripts, graphics etc. so that you can easily move them around or send them to other team members. When loading an NKI, the resource container is treated like a sample, so if it is not found it will appear in the Samples Missing dialogue.

Setup

To create a Resource Container for your NKI, open up its instrument options and click the <Create> button beside the area labeled as Resource Container. After creating a new resource container file, KONTAKT checks if there is already a resource folder structure available. If there isn’t, you can let KONTAKT create it for you. If you do this, you will find a Resources and a Data folder next to the NKR file you just created.

The Resources folder is the place where you can store the files an NKI can use that are not samples. As you can see KONTAKT has already created several subfolders for you: ir_samples, pictures (for GUI graphics and wallpapers), data (for .nka files) and scripts. The only thing to do now is to move your files into the right folders and you are ready to go.

Working with the Resource Container

Let’s say you’re creating a new library: after setting up the Resource Container as described above you can tell all of your NKIs that are part of your library to use this special Resource Container. Just open up the NKI’s instrument options and use the Browse function.

As long as the Resources folder exist besides the NKR file (this is the Resource Container monolith), KONTAKT will read all files directly from this folder structure.

For loading scripts from the scripts subfolder, use the “Apply from… -> Resources folder” function within the script editor.

Now let’s say you want to send your current working status to another team member. Open up the instrument options, click the Create button and then overwrite your NKR file. Be aware that this will completely overwrite your monolith, it won’t be matched in any way. Now KONTAKT will do all of the following:

- check the ir_samples subfolder for any .wav, .aif or .aiff files and put them into the monolith.
- check the pictures folder for any .tga or .png files that also have a .txt file of the same filename next to them. All of these will be packed into the monolith. Note that wallpapers also need a .txt file or they will be ignored.
- check the scripts subfolder for any .txt files which will then be put into the monolith.
- check the data subfolder for any .nka files which will then be put into the monolith.

After that rename your Resources folder and reopen your NKI. Now that there is no Resources folder present anymore, KONTAKT will automatically read from the NKR monolith file. If everything is still working as expected you can send your NKIs and the NKR monolith to your team member.

To continue your work just rename the Resources folder back to “Resources”.

Remarks

- The Resource Container will be checked in the samples missing dialog.
- When you save your NKI as a monolith file the Resource Container will not be integrated into the monolith – the path to the Resource Container will be saved in absolute path mode.
Changing FX from KSP

Introduction

Prior to Kontakt 5.5, there was already the infrastructure in place to get info about the content of effect slots via engine parameter variables like e.g. $ENGINE_PAR_EFFECT_TYPE and built-in constants like $EFFECT_TYPE_FILTER (see Module Status Retrieval). Starting with Kontakt 5.5, it is also possible to change FX with the same set of built-in variables.

Example

on init
    set_engine_par($ENGINE_PAR_EFFECT_TYPE, $EFFECT_TYPE_FILTER, 0, 0, -1)
    set_engine_par($ENGINE_PAR_EFFECT_SUBTYPE, $FILTER_TYPE_LDR_LP4, 0, 0, -1)
end on

inserts a 4 pole lowpass ladder filter into the first group slot

on async_complete callback

Changing FX slot contents is an asynchronous operation. This means, one cannot reliably access the newly instantiated effect immediately after instantiation. To resolve this, the command returns an $NI_ASYNC_ID and triggers the on async_complete callback.

Default Filter Type

Filters are somewhat special as they are effect types that feature subtypes. Since one can now instantiate a new filter from KSP without explicitly selecting its subtype, there is the need for a predefined default filter subtype. This is the SV LP4.

Implications on Modulation and Automation assignments

When changing the contents of an FX slots through KSP, it is expected that the handling of assigned automation and modulation is identical to performing the same action using Kontakt's GUI.

- when changing a slot’s effect type or removing it entirely, all modulation and automation assignments are also removed. Specifically to modulators, if the removed assignments are the only ones of a certain one (i.e., if the modulator is not assigned to other targets as well), the modulator itself is also removed.

- when changing a slot’s effect subtype (only applies to filters), everything is left unchanged. It is accepted that in certain cases, one may end up with "orphaned" modulation assignments as it is the case right now; e.g. when having modulation assigned to a parameter that is not available anymore, like Resonance or Gain.

Changing Modulator SubTypes

Using the same commands described above, one can also change the subtype of internal modulators. Specifically, one could switch between envelope types (AHDSR, Flex and DBD), or LFO types (Rectangle, Triangle, Sawtooth, Random and Multi). A modulator cannot be inserted or removed. Its Type (LFO, Envelope, Step Modulator, Envelope Follower and Glide) cannot be changed either.

Special Cases

There are two effect types that cannot be set from KSP:

- Surround Panner
- AET filter
The Advanced Engine Tab

The Advanced Engine tab can be a useful tool for debugging and measuring the performance of your scripts. While the Engine tab (a sub-tab of the Expert tab in the Browser Pane) can provide a useful display of performance statistics, the advanced version gives higher accuracy to things like CPU usage, and also displays information on multiple instances of KONTAKT when it is used as a plug-in.

Displaying the Advanced Engine Tab

As mentioned earlier, the Engine tab is a sub-section of the Expert tab, which can be found in the Browser Pane.

- To access the Advanced Engine tab, hold the [Alt] key while clicking on the Engine tab.
- To return to the main Engine tab, just click on the Engine tab again with no keys held.

Instance Overview

If you are running multiple instances of KONTAKT as a plug-in in a DAW or host, each instance will be given an entry in this section. If you are using KONTAKT in standalone, only the current instance will be displayed.

There are five performance statistics you can view here

- **CPU**: displays the current CPU load in percent (at a higher resolution than the other CPU readouts in KONTAKT) as well as the highest recorded peak CPU level (displayed in parenthesis). You can reset the high peak by re-initializing the KONTAKT instance by clicking on the Engine Restart (!) button.
- **Voices**: displays the total number of voices currently in use by the KONTAKT instance.
- **Voices killed**: displays the total number of voices that have been killed due to CPU (displayed on the left) and DFD (on the right) overload.
- **Process Buffer**: displays the current audio buffer size in samples.
- **Events**: displays the total number of events currently in the event queue. While a voice is the equivalent to a sample being played back, an event is more closely related to MIDI note messages being processed by the engine. For example, a single event could produce 3 voices, if there are 3 samples mapped to a single note. Additionally, if you are holding a MIDI key even though the triggered sample has finished playback, the voice will terminate, but the event will remain in the queue. As such, this display can be useful for tracking down events that are hanging, as these are not always audible in the way that hanging voices would be.

Total

The lower section displays the total performance statistics for all KONTAKT instances currently loaded. It has the following parameters:

- **Voices** and **Voices killed**: like the displays in the Instance Overview, but a total for all instances.
- **DFD load**: if you are playing Instruments that use DFD mode, this measures their hard disk access. It is essentially a more accurate version of the Disk meter in KONTAKT's Main Header.
- **DFD memory**: a measurement of how much RAM is being used to process the DFD stream.
- **DFD requests**: the total number of requests made by KONTAKT to read data from the hard disk.
Multi Script

General Information

The multi script utilizes the same KSP syntax as the instrument scripts. Here are the main differences:

- the multi script works on a pure MIDI event basis, i.e. you're working with raw MIDI data
- there are no on note, on release and on controller callbacks
- every MIDI event triggers the on midi_in callback
- there are various built-in variables for the respective MIDI bytes

The new multi script tab is accessed by clicking on the "KSP" button in the multi header.

Just like instrument scripts are saved with the instrument, multi scripts are saved with the multi. GUI-wise everything's identical with the instrument script except for the height, it's limited to 3 grid spaces (just like the instrument scripts in KONTAKT 2/3). The scripts are stored in a folder called "multiscripts", which resides next to the already existing "scripts" folder, that is, inside the "presets" folder:

/Native Instruments/Kontakt 4/presets/multiscripts

The multi script has only two callback types, the on midi_in callback and the various on ui_control callbacks. Each MIDI event like Note, Controller, Program Change etc. is triggering the on midi_in callback.

It is very important to understand the different internal structure of the event processing in the multi script opposed to the instrument script.

On the instrument level, you can retrieve the event IDs of notes only, that is, $EVENT_ID only works in the on note and on release callback. On the multi level, any incoming MIDI event has a unique ID which can be retrieved with $EVENT_ID. This means, $EVENT_ID can be a note event, a controller message, a program change command etc.

This brings us to the usage of change_note(), change_velo() etc. commands. Since $EVENT_ID does not necessarily refer to a note event, this commands will not work in the multi script (there will be a command coming soon which enables you to change the MIDI bytes of events without having to ignore them first).

And most important of all, remember that the multi script is really nothing more than a MIDI processor (whereas the instrument script is an event processor). A note event in the instrument script is bound to a voice, whereas MIDI events from the multi script are "translated" into note events on the instrument level. This simply means that play_note(), change_tune() etc. don't work in the multi script.

You should be familiar with the basic structure of MIDI messages when working with the multi script.
ignore_midi

<table>
<thead>
<tr>
<th>ignore_midi</th>
</tr>
</thead>
<tbody>
<tr>
<td>ignores MIDI events</td>
</tr>
</tbody>
</table>

Remarks

Like `ignore_event()`, `ignore_midi` is a very "strong" command. Keep in mind that `ignore_midi` will ignore all incoming MIDI events. If you simply want to change the MIDI channel and/or any of the MIDI bytes, you can also use `set_event_par()`.

Examples

```plaintext
on midi_in
    if ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_ON and $MIDI_BYTE_2 > 0)
        ignore_midi
    end if
    if ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_OFF or ...
        ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_ON and $MIDI_BYTE_2 = 0))
        ignore_midi
    end if
end on
```

ignoring note on and note off messages. Note that some keyboards use a note on command with a velocity of 0 to designate a note off command.

See Also

`ignore_event()`
on midi_in

midi callback, triggered by every incoming MIDI event

Examples

```plaintext
on midi_in
  if ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_ON and $MIDI_BYTE_2 > 0)
    message ("Note On")
  end if
  if ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_ON and $MIDI_BYTE_2 = 0)
    message ("Note Off")
  end if
  if ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_OFF)
    message ("Note Off")
  end if
  if ($MIDI_COMMAND = $MIDI_COMMAND_CC)
    message ("Controller")
  end if
  if ($MIDI_COMMAND = $MIDI_COMMAND_PITCH_BEND)
    message ("Pitch Bend")
  end if
  if ($MIDI_COMMAND = $MIDI_COMMAND_MONO_AT)
    message ("Channel Pressure")
  end if
  if ($MIDI_COMMAND = $MIDI_COMMAND_POLY_AT)
    message ("Poly Pressure")
  end if
  if ($MIDI_COMMAND = $MIDI_COMMAND_PROGRAM_CHANGE)
    message ("Program Change")
  end if
end on
```

monitoring various MIDI data

ignore_midi
set_midi()

\[
\text{set_midi}(\text{<channel>}, \text{<command>}, \text{<byte-1>}, \text{<byte-2>})
\]

create any type of MIDI event

Remarks

If you simply want to change the MIDI channel and/or any of the MIDI bytes, you can also use set_event_par().

Examples

\begin{verbatim}
on midi_in
  if ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_ON and $MIDI_BYTE_2 > 0)
    set_midi($MIDI_CHANNEL,$MIDI_COMMAND_NOTE_ON,$MIDI_BYTE_1+4,$MIDI_BYTE_2)
    set_midi($MIDI_CHANNEL,$MIDI_COMMAND_NOTE_ON,$MIDI_BYTE_1+7,$MIDI_BYTE_2)
  end if

  if ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_OFF or ...
    ($MIDI_COMMAND = $MIDI_COMMAND_NOTE_ON and $MIDI_BYTE_2 = 0))
    set_midi($MIDI_CHANNEL,$MIDI_COMMAND_NOTE_ON,$MIDI_BYTE_1+4,0)
    set_midi($MIDI_CHANNEL,$MIDI_COMMAND_NOTE_ON,$MIDI_BYTE_1+7,0)
  end if
end on
\end{verbatim}

a simple harmonizer – notice that you have to supply the correct note off commands as well

### Event Parameter Constants
event parameters to be used with `set_event_par()` and `get_event_par()`

$EVENT_PAR_MIDI_CHANNEL
$EVENT_PAR_MIDI_COMMAND
$EVENT_PAR_MIDI_BYTE_1
$EVENT_PAR_MIDI_BYTE_2
Version History

**KONTAKT 5.7**

New Features
- New built-in variable for all UI elements: `$CONTROL_PAR_Z_LAYER`
- Waveform styling options: `$CONTROL_PAR_WAVE_COLOR`, `$CONTROL_PAR_BG_COLOR`, `$CONTROL_PAR_WAVE_CURSOR_COLOR`, `$CONTROL_PAR_SLICEMARKERS_COLOR`, `$CONTROL_PAR_BG_ALPHA`
- Engine parameter variables for new effects: ACBox, Cat, DStortion, HotSolo, Van51
- Added engine parameter variables for effect parameters that are buttons
- Added engine parameter variables for setting the subtype for the Distortion and Saturator effects: `$ENGINE_PAR_DISTORTION_TYPE`, `$ENGINE_PAR_SHAPE_TYPE`

Improved Features
- `ui_waveform` now accepts `$HIDE_PART_BG` as a `hide_part()` and `$CONTROL_PAR_HIDE` constant.

**KONTAKT 5.6.8**

New Features
- New built-in UI variables: `$NI_CONTROL_PAR_IDX`, `$HIDE_PART_CURSOR`

**KONTAKT 5.6.5**

New Features
- New UI control: `ui xy`
  - incl. new built-in variables: `$CONTROL_PAR_CURSOR_PICTURE`, `$CONTROL_PAR_MOUSE_MODE`, `$CONTROL_PAR_ACTIVE_INDEX`, `$CONTROL_PAR_MOUSE_BEHAVIOUR_X`, `$CONTROL_PAR_MOUSE_BEHAVIOUR_Y`
- New UI commands: `set_control_par_arr()` and `set_control_par_str_arr()`

**KONTAKT 5.6**

New Features
- Support for real numbers, including new ~realVariable and ?realArray[] types.
- Additional mathematical commands for real numbers.
- New constants: ~NI_MATH_PI and ~NI_MATH_E
- New UI commands: `set_ui_color()` and `set_ui_width_px()`
- New control parameter for setting automation IDs via KSP: `$CONTROL_PAR_AUTOMATION_ID`

**KONTAKT 5.5**

New Features
• New engine parameter variables and built-in constants for controlling the unit parameter of
time-related parameters, e.g. $ENGINE_PAR_DL_TIME_UNIT, $NI_SYNC_UNIT_8TH
• Possible to change FX from KSP by using engine parameter variables for effect type, e.g.
  set_engine_par($ENGINE_PAR_EFFECT_TYPE,$EFFECT_TYPE_FILTER,0,0,-1)

See also "Changing FX from KSP" in "Advanced Concepts"
• Possible to set Time Machine Pro voice settings: set_voice_limit(),
  get_voice_limit(), $NI_VL_TMPRO_STANDARD, $NI_VL_TMRPO_HQ

KONTAKT 5.4.2

Improved Features
• various manual corrections

KONTAKT 5.4.1

New Features
• New callback type: on_persistence_changed
• New command: set_snapshot_type()
• New command: make_instr_persistence()
• New key color constants and command: get_key_color()
• Ability to set the pressed state of KONTAKT's keyboard: set_key_pressed(),
  set_key_pressed_support(), get_key_triggerstate()
• Ability to specify key names and ranges: set_key_name(), get_key_name(),
  set_keyrange(), remove_keyrange()
• Ability to specify key types: set_key_type(), get_key_type()

Improved Features
• Data folder in resource container, additional mode for load_array()
• Usage of load_array_str() in other callbacks

KONTAKT 5.3

New Features
• Added Engine Parameter Variables for the new Simple Filter effect

KONTAKT 5.2

Improved Features
• Updated MIDI file handling

New Features
• Commands to insert and remove MIDI events

KONTAKT 5.1.1

New Features
• Added Engine Parameter Variables for the new Feedback Compressor effect
**KONTAKT 5.1**

New Features
- **new commands:** `load_array_str()`, `save_array_str()`
- Added Engine Parameter Variables for the new Jump Amp effect

Manual Corrections
- miscellaneous corrections and improvements

**KONTAKT 5.0.2**

New Features
- New Engine Parameter Variables for Time Machine Pro (HQ Mode):
  - `$ENGINE_PAR_ENVELOPE_ORDER`, `$ENGINE_PAR_FORMANT_SHIFT`

**KONTAKT 5.0.1**

New Features
- Added effect type and effect sub-type constants for the new KONTAKT 5 effects

**KONTAKT 5**

New Features
- **MIDI file support incl. a whole lot of new commands:**
  - `load_midi_file()`, `save_midi_file()`, `mf_get_num_tracks()`, `mf_get_first()`,
  - `mf_get_next()`, `mf_get_next_at()`, `mf_get_last()`, `mf_get_prev()`,
  - `mf_get_prev_at()`, `mf_get_channel()`, `mf_get_command()`,
  - `mf_get_byte_one()`, `mf_get_byte_two()`, `mf_get_pos()`,
  - `mf_get_track_idx()`, `mf_set_channel()`, `mf_set_command()`,
  - `mf_set_byte_one()`, `mf_set_byte_two()`, `mf_set_pos()`
- **new UI control:** `ui_text_edit`
- **new UI control:** `ui_level_meter`
  - incl. new commands and built-in variables:
    - `attach_level_meter()`, `CONTROL_PAR_BG_COLOR`, `CONTROL_PAR_OFF_COLOR`,
    - `CONTROL_PAR_ON_COLOR`, `CONTROL_PAR_OVERLOAD_COLOR`,
    - `CONTROL_PAR_PEAK_COLOR`, `CONTROL_PAR_VERTICAL`
- **new UI control:** `ui_file_selector`
  - incl. new commands and built-in variables:
    - `fs_get_filename()`, `fs_navigate()`,
    - `CONTROL_PAR_BASEPATH`, `CONTROL_PAR_COLUMN_WIDTH`,
    - `CONTROL_PAR_FILEPATH`, `CONTROL_PAR_FILE_TYPE`
- **new commands for dynamic dropdown menus:**
  - `get_menu_item_value()`, `get_menu_item_str()`, `get_menu_item_visibility()`,
  - `set_menu_item_value()`, `set_menu_item_str()`, `set_menu_item_visibility()`, `CONTROL_PAR_SELECTED_ITEM_IDX`,
  - `CONTROL_PAR_NUM_ITEMS`
- **new callback type:** `on async_complete`
  - incl. new built-in variables:
    - `$NI_ASYNC_ID`, `$NI_ASYNC_EXIT_STATUS`,
    - `$NI_CB_TYPE_ASYNC_OUT`
- **new internal constant for KONTAKT’s new bus system:** `$NI_BUS_OFFSET`
- **new engine_par constants for new KONTAKT 5 effects**
- **new commands:** `wait_ticks()`, `stop_wait()`
Improved Features

- support for string arrays added for `load_array()` and `save_array()`
- PGS support for strings: `pgs_create_str_key()`, `pgs_str_key_exists()`, `pgs_set_str_key_val()`, `pgs_get_str_key_val()`
- the maximum height of `set_ui_height_px()` is now 540 pixels

**KONTAKT 4.2**

New Features

- the Resource Container, a helpful tool for creating instrument libraries
- new ID to set wallpapers via script: `$INST_WALLPAPER_ID`
- new key color: `$KEY_COLOR_BLACK`
- new callback type: `on_listener`
- new commands for this callback: `set_listener()`, `change_listener_par()`
- new commands for storing arrays: `save_array()`, `load_array()`
- new command to check the purge status of a group: `get_purge_state()`
- new built-in variable: `$NI_SONG_POSITION`
- new control parameter: `$CONTROL_PAR_ALLOW_AUTOMATION`

Improved Features

- The script editor is now much more efficient, especially with large scripts.
- New ui control limit: 256 (per control and script).
- Event parameters can now be used without affecting the system scripts.

**KONTAKT 4.1.2**

New Features

- new UI control: UI waveform
- new commands for this UI control: `set_ui_wf_property()`, `get_ui_wf_property()`, `attach_zone()`
- new variables & constants to be used with these commands: `$UI_WAVEFORM_USE_SLICES`, `$UI_WAVEFORM_USE_TABLE`, `$UI_WAVEFORM_TABLE_IS_BIPOLAR`, `$UI_WAVEFORM_USE_MIDI_DRAG`, `$UI_WF_PROP_PLAY_CURSOR`, `$UI_WF_PROP_FLAGS`, `$UI_WF_PROP_TABLE_VAL`, `$UI_WF_PROP_TABLE_IDH_HIGHLIGHT`, `$UI_WF_PROP_MIDI_DRAG_START_NOTE`
- new event parameter: `$EVENT_PAR_PLAY_POS`

**KONTAKT 4.1.1**

Improved Features

- The built-in variables `$SIGNATURE_NUM` and `$SIGNATURE_DENOM` don't reset to 4/4 if the host's transport is stopped

**KONTAKT 4.1**

New Features

- implementation of user defined functions: `function`
new control parameter variable: $CONTROL_PAR_AUTOMATION_NAME
new command: delete_event_mark()
support for polyphonic aftertouch:
on poly_at...end on, %POLY_AT[], $POLY_AT_NUM
new command: get_event_ids()
new control parameter variables:
$CONTROL_PAR_KEY_SHIFT, $CONTROL_PAR_KEY_ALT, $CONTROL_PAR_KEY_CONTROL

Improved Features
• The built-in variable $MIDI_CHANNEL is now also supported in the instrument script.
• The sample offset parameter in play_note() now also works in DFD mode, according to the S.Mod value set for the respective zone in the wave editor

Manual Corrections
• correct Modulation Engine Parameter Variables

KONTAKT 4.0.2

New Features
• new engine parameter to set the group output channel: $ENGINE_PAR_OUTPUT_CHANNEL
• new built-in variable: $NUM_OUTPUT_CHANNELS
• new function: output_channel_name()
• new built-in variable: $CURRENT_SCRIPT_SLOT
• new built-in variable: $EVENT_PAR_SOURCE

Improved Features
• The load_ir_sample() command now also accepts single file names for loading IR samples into KONTAKT's convolution effect, i.e. without a path designation. In this case the sample is expected to reside in the folder called "ir_samples" inside the user folder.

KONTAKT 4

New Features
• Multiscript
• New id-based User Interface Controls system:
  set_control_par(), get_control_par() and get_ui_id()
• Pixel exact positioning and resizing of UI controls
• Skinning of UI controls
• New UI controls: switch and slider
• Assign colors to KONTAKT's keyboard by using set_key_color()
• new timing variable: $KSP_TIMER (in microseconds)
• new path variable: $GET_FOLDER_FACTORY_DIR
• new hide constants: $HIDE_PART_NOTHING & $HIDE_WHOLE_CONTROL
• link scripts to text files

Improved Features
• New array size limit: 32768
• Retrieve and set event parameters for tuning, volume and pan of an event
  ($EVENT\_PAR\_TUNE, \$EVENT\_PAR\_VOL and \$EVENT\_PAR\_PAN)
• larger performance view size, set_ui_height(), set_script_title()
• beginning underscores from KONTAKT 2/3 commands like _set_engine_par() can be
  omitted, i.e. you can write set_engine_par() instead
**KONTAKT 3.5**

New Features
- Retrieve the status of a particular event: `event_status()`
- Hide specific parts of UI controls: `hide_part()`
  
Improved Features
- Support for channel aftertouch: `$VCC_MONO_AT`
- New array size limit: 2048

**KONTAKT 3**

New Features
- Offset for wallpaper graphic: `_set_skin_offset()`
- Program Global Storage (PGS) for inter-script communication
  
  ```
  _pgs_create_key()
  _pgs_key_exists()
  _pgs_set_key_val()
  _pgs_get_key_val()
  ```
- New callback type: `on _pgs_changed`
- Addressing modulators by name:
  ```
  find_mod()
  find_target()
  ```
- Change the number of displayed steps in a column: `set_table_steps_shown()`
- Info tags for UI controls: `set_control_help()`

Improved Features
- All five performance views can now be displayed together

**KONTAKT 2.2**

New Features
- New callback type: `on ui_update`
- New built-in variables for group based scripting
  ```
  $REF_GROUP_IDX
  %GROUPS_SELECTED
  ```
- Ability to create custom group start options:
  ```
  NO_SYS_SCRIPT_GROUP_START
  (+ various Group Start Options Variables)
  ```
- Retrieving the release trigger state of a group: `$ENGINE_PAR_RELEASE_TRIGGER`
- Default values for knobs: `set_knob_defval()`

**KONTAKT 2.1.1**

New Features
- Assign unit marks to knobs: `set_knob_unit()`
• Assign text strings to knobs: `set_knob_label()`
• Retrieve the knob display: `_get_engine_par_disp()`

**KONTAKT 2.1**

New Features
- string arrays (! prefix) and string variables (@ prefix)
- engine parameter: `_set_engine_par()`
- loading IR samples: `_load_ir_sample()`
- Performance View: `make_perfview`
- rpn/nrpn implementation:
  on rpn & on nrpn
  `$RPN_ADDRESS`
  `$RPN_VALUE`
  `msb()` & `lsb()`
  `set_rpn()` & `set_nrpn()`
- event parameters: `set_event_par()`
- New built-in variables:
  `$NUM_GROUPS`
  `$NUM_ZONES`
  `$VCC_PITCH_BEND`
  `$PLAYED_VOICES_TOTAL`
  `$PLAYED_VOICES_INST`

Improved Features
- possible to name UI controls with `set_text()`
- moving and hiding UI controls
- MIDI CCs generated by `set_controller()` can now also be used for automation (as well as modulation).

**KONTAKT 2**

Initial release.
