

iZotope revives iconic distortion plugin, Trash, with new features, a free option, and iPad support

Take your sound from subtle saturation to ultimate chaos

Berlin, March 12, 2024 – iZotope, part of Native Instruments, today announced the revival of their iconic distortion plugin, Trash. The fan-favorite distortion tool was first introduced by iZotope back in 2003. Two decades later, this new incarnation combines the most popular features with a modern design, and a whole new take on the joy of breaking things.

"..some plugins bring that magic, Trash is one of them." – Nicky Romero

"Trash is by far one of my favorite plugins for years now, and the new one has a 'scream' variable parameter which is great with an LFO". – Arca

Trash takes sound into new dimensions with unlimited ways to twist, mangle, and energize music. With an easy-to-use interface, the plugin is driven by two powerful engines: the Trash and Convolve modules. Trash's namesake module includes over 60 distortion types for everything from subtle saturation to full-on sonic mutation. Convolve comes with over 600 creative impulse responses to morph and filter your sound, from tin cans and piano cabinets, to reversed reverbs and underwater recordings.

In a new twist for Trash, both modules include an intuitive XY pad that allows users to blend between either four distortion algorithms, or four impulse responses, opening up endless potential for auditory chaos. Other new features include an Envelope Follower, a Dice Roll button for inspiration, and a Scream filter. Plus, no matter how wild it gets, Trash takes care of output levels with intelligent autogain and limiter settings.

Available as a desktop plugin, Trash is also compatible with Logic Pro for iPad using the AUv3 format. Both the desktop and iPad versions of Trash also include a new Trash Lite mode, so that everyone can get a piece of the new Trash for free.
